underground published 100 different titles. Many of the early editions bore the simple yet historically significant title *Information Bulletin* (*Biuletyn Informacyjny*) and consisted of one or two pages. As might be expected, the majority of these materials were prepared in Warsaw, Poznan, Wroclaw, Lodz, and Gdansk. Press runs varied from several hundred to over 10,000, depending largely upon available equipment and printing supplies. During the martial law period (December 1981–July 1983), most of these publications emanated from the remnants of these periodicals, including *Mazovian Weekly* (*Tygodnik Mazowsze*), which was prepared by union activists in Warsaw! but Solidarity cells in factories and other local enterprises also issued short newsletters.

Solidarity activists did not, however, constitute the only source of clandestine periodicals in Poland. The publications of other underground groups assumed somewhat greater prominence after 1985, due at least in part to the increasingly dim prospects for the union's revival. Nearly all of these groups professed loyalty to Solidarity's ideals, but they also expressed a variety of opinions that distinguish them from the Solidarity mainstream. Three of these organizations merit particular attention. One, known as the Committees for Social Defense (*Komitety Obrony Społecznej*), issued a journal called KOS, which was directed primarily toward an intellectual audience. The Fighting Solidarity (*Solidarnosc Walczaca*) group published a paper of the same name, advocating a more confrontational stance than that favored by most Solidarity leaders. The Confederation for an Independent Poland (*Konfederacja Polski Niepodległej*), a right-of-center group that antedated Solidarity, disseminated its strong critiques of the regime through its journals *Independence* (*Niepodleglosc*) and *We Don't Want Commies* (*Nie chcemy komuny*). Further, publications targeted at specific social groups such as teachers, university students, and medical workers also attained greater prominence.

Several clandestine publishers branched out into the production of full-length books, an effort that gave rise to greater coordination among the underground media. In October 1986, representatives of several underground journals formed a Social Council for Independent Publishers. At the same time, several publishers concentrated on books rather than periodicals

because sales of the latter proved less profitable. Because this might portend a shift from shorter periodicals to longer products, some activists called for renewed emphasis on journals. Much of the debate centered on the role of the Consortium of Independent Publishers, a group founded in 1986, which sought to promote greater cooperation and minimize duplication within the underground media. Defenders of the consortium claimed that periodicals would continue to play a key role. In June 1986, the consortium helped found an Independent Publishers' Insurance Fund to reimburse members whose operations were closed by the authorities.

Leaflets, handbills, and other ephemera were also used by the Polish opposition, but they declined significantly with the decline in large-scale demonstrations. During the martial law period, the underground produced leaflets in connection with local strikes and other public protests. For example, activists printed and distributed a small leaflet announcing the place and time of a pro-Solidarity rally in Warsaw scheduled for May Day 1985. Leaflets were also used to alert the populace of the time and frequency of Radio Solidarity broadcasts. Still other broadsheets were designed to identify and disgrace those who cooperated with the regime during martial law. For instance, one handbill, entitled "List of Collaborators," purported to be a commendation from the government. The citation praised the recipients for their assistance and contained a blank space for insertion of the collaborators names.

Polish underground PSYOP also relied heavily upon the dissemination of nonverbal symbols by means of mock postage stamps and currency. In 1984, for example, the opposition produced a series of stamps portraying dissident leaders such as Jacek Kuron and Adam Michnik. That same year, the Solidarity organization in Krakow issued a stamp in honor of George Orwell. During 1986, dissidents printed a set of stamps commemorating "150 Years of the Underground Press in Poland." In addition, the underground produced forged Polish currency bearing the portrait of Lech Walesa in place of the figures who appeared on genuine banknotes. Dissidents reportedly printed a banknote containing the likeness of Gen Wojciech Jaruzelski and the inscription, "30 Pieces of Silver." Crude forgeries of US currency, designed as novelty items, also

appeared. During 1985, for instance, an oversized counterfeit of a \$100 bill appeared in Poland with Walesa's picture in place of Benjamin Franklin's portrait.

The producers of underground publications faced a variety of obstacles. Dissidents understandably were reluctant to discuss openly the details of production and dissemination techniques. Most individual publishing enterprises were comprised of small numbers of people who strived to keep their identities and the location of their equipment well-concealed. Materials were first produced on typewriters using carbon paper or on mimeograph machines but the opposition increasingly came to rely on offset and silk-screen presses. The printing process was itself dispersed, particular functions being assigned to different locations. According to the production chief, Warsaw's *Tygodnik Mazowsze* needed 37 apartments, 30 of which were used in preparing each issue. Funds to acquire and maintain equipment came from publication sales, but Solidarity sympathizers abroad also collected financial assistance and made it available. The dissemination of underground publications necessarily involved significantly large numbers of people and great risk. Once printed, copies were reportedly sent to a variety of locations, where *kolportery* (literally, "hawkers") collected them for delivery to subscribers. In the case of *Tygodnik Mazowsze*, this led to the creation of a huge distribution network.

The Polish government responded to underground publishing with a curious strategy that blended harassment, repression, propaganda attacks, disinformation, and apparent neglect. The regime attempted to limit underground publications through strictures on the availability of printing supplies. Stationery shops were required to record all purchases of more than 1,000 sheets of paper. Agents of the Security Service (*Sluzba Bezpieczenstwa*) reportedly monitored such purchases and penetrated several underground organizations. From time to time, officials arrested individuals connected with dissident publications. Anyone engaged in such activity could be detained for 48 hours and fined up to 50,000 zlotys-the amount earned by an average Pole in two months. The authorities sometimes confiscated automobiles belonging to distributors, presumably to hamper the latter's ability to

continue their work. In some cases, the Security Service closed printing operations completely.

The regime also conducted a major PSYOP effort of its own to discredit the underground media. This campaign contained a variety of themes, one of which posited that underground publications were tools of the West-especially the United States. For example, the official press frequently claimed that US dollars were sent to the underground to ferment unrest in Poland. Also, infrequent factual errors in the underground media offered opportunities for the regime to attack their credibility. Moreover, government agents periodically engaged in black propaganda. In some instances, portions of genuine publications, were excised and replaced with forged texts. On other occasions, security officials produced forgeries of entire journals. And in still other cases, erroneous or otherwise embarrassing information was covertly supplied to publishers who reproduced it in good faith. For the most part, however, underground publishers discovered and exposed such activities.

Despite governmental attempts to close them down, Poland's underground media remained prodigious by East European standards. True, the sheer extent of underground publishing rendered it difficult for the regime to suppress such activity entirely, even if Polish officials had made a concerted effort to do so. Nevertheless, why they did not adopt even stronger measures raises some interesting questions. It may well be true, as one Western journalist suggested, that the government could not stamp out the underground media without causing uproar at home and making Poland an international outcast. This consideration might have grown even greater after Mikhail Gorbachev assumed power in the USSR. The regime might also have concluded that it could not hope to win genuine popular support and must therefore tolerate the phenomenon. Then, too, government officials might have believed that the underground press allowed dissidents to vent their frustrations in a relatively harmless manner so long as opposition remained largely confined to the realm of theory.

The underground press criticized and challenged the political, social, and economic status quo. During the martial law period, dissident media served primarily to report instances of repression and to encourage resistance among the

populace. For example, they published information on political prisoners, endorsed strikes and demonstrations, and advocated noncooperation with the regime (e.g., election boycotts). When it became apparent that direct confrontation would not bring about the restoration of Solidarity (or other reforms), the underground press as a whole resigned itself to a long-term struggle with the authorities.

Underground publishing reflected a variety of political trends, from right-wing Polish conservatism to liberal democratic socialism. However, nearly all publications shared some common goals. According to a report issued in early 1987 by the Social, Council for Independent Publishers, they strived to propagate undistorted Polish history, Poland's struggles for independence, the postwar rule of communism in Poland, and methods of national resistance. In this way, they hoped to expose "ideological myths" and "propaganda falsehoods of the communists."

In its attempts to achieve these goals, the underground press addressed a wide range of domestic and international issues. Violations of human rights and the absence of genuine democracy in Poland continued to bulk large in its reportage, but it also devoted significant attention to economic affairs in light of the chronic shortages and debt problems that plagued the Poles. It reflected and encouraged debates over the extent to which dissidents might work for reform through participation in legal organizations such as the workers' councils that were set up following the banning of Solidarity.

Significantly, the emergence of the Freedom and Peace Movement (*Wolnosc i Pokoj*), which encouraged arms reduction and resistance to compulsory service in the Polish People's Army, also received favorable attention from the underground media, as did environmental issues. Particularly noteworthy was the underground media's increased coverage of international questions such as US-Soviet arms negotiations, Gorbachev's apparent efforts at internal reform, and economic developments in China. Despite glasnost and perestroika, however, the underground media generally continued to criticize the Soviets and praise the Americans.

The underground press clearly constituted the principal means for the dissemination of opposition PSYOP, but

dissidents also extended their efforts to the realm of electronic media. Radio broadcasting proved to be highly vulnerable to jamming and to detection by the authorities, but it continued to resurface from time to time. Dissidents with some experience in electronics constructed ersatz transmitters and made brief broadcasts on FM frequencies from the roofs of large buildings. Collectively called Radio Solidarity, such transmissions first appeared on the airwaves during April 1982, after which they were broadcast in several different cities. Program content was necessarily limited, but broadcasts usually addressed such current affairs as price hikes or the significance of historical anniversaries. In some instances, these transmissions successfully overrode television signals in order to convey a brief verbal message or a "still" image of the slogan *Solidarnosc zyje* (Solidarity lives).

Dissident psyopsters also made good use of videocassette recorders (VCR), audiotape recorders, and even microcomputers. Poland contained an estimated 500,000 to 700,000 privately owned VCRs. The NOWA underground publishing enterprise distributed not only Western films but also videocassettes on Polish subjects produced by the Paris-based Videoknotakt organization. Domestic productions, such as filmed interviews with Lech Walesa, also circulated widely. Government authorities attempted to suppress this activity—primarily by confiscations at the border—but the trade continued to flourish. The underground also prepared and disseminated a large variety of audiocassettes containing antiregime songs, news commentaries, interviews, and lectures on Polish history. Some of these tapes reportedly were broadcast over factory loudspeaker systems. Finally, several clever computer owners managed to generate antiregime texts or games. According to an acerbic report published in the hard-line military newspaper *Zolnierz Wolnosci* (*Soldier of Freedom*), Western interests inspired some programmers to create programs that promoted anticommunist attitudes.

Despite various crackdowns by the authorities, the underground media remained a part of the Polish sociopolitical scene. Dissidents stood in a centuries-old tradition of conspiratorial information activity, and their eagerness to utilize modern technology rendered it virtually impossible for the

regime to suppress their efforts. As suggested above, the government might have decided to tolerate this situation; nevertheless, the opposition media in Poland provided a real-world example of the success that can be attained through nongovernmental PSYOP.

The Libyan Raid as a Psychological Operation

Col Frank L. Goldstein, USAF

The use and employment of US forces in psychological operations is a basic but little understood part of US doctrine. The use of US forces to achieve national strategic and tactical security objectives is the basis of PSYOP planning. Security objectives include the influencing of friendly, neutral, and/or enemy audiences to behave favorably or unobstructively toward US national security. A psychological operation is any operation that conveys selected information and indicators to foreign individuals and groups and influences emotions, motives, objective reasoning, and ultimately the behavior of the target audience. Such an operation should also induce or reinforce foreign attitudes and behavior that are favorable to US objectives. The target audience is a foreign group that may include hostile military forces but can also be neutral or friendly.

The stated purposes of the US raid on Libya as reported in the press were to emphasize the cost of state-sponsored terrorism, to damage terrorist operations, and to encourage internal insurrection (*New York Times*, 5 May 1986). I view the US Libyan raid as strictly a psychological operation, an operation planned and carried out to achieve a psychological point of view.

An analysis of the Libyan situation prior to the US raid would have revealed the following scenario.

- Was a psychological operation required? The answer would be yes. The United States needed to influence attitudes and behaviors concerning terrorism among enemy, friendly, and neutral audiences, especially with Libya and Muammar Qadhafi.**

- What would be the best psychological operation approach? **The best approach in consideration of prior attempts to influence Qadhafi and others would be a limited tactical air strike.**

- What was the psychological situation? **The psychological situation revealed that many nations, friendly, neutral, and enemy, were not taking seriously the US concern about state-sponsored terrorism. Colonel Qadhafi had revealed himself to have mood swings and to be susceptible to depressive episodes. Intelligence and the media revealed that there was underlying dissatisfaction within the Libyan government with the current policies of Qadhafi. Additionally, the world had just been --objected to a series of terrorist acts and appeared receptive to such a raid.**

- Would an air strike have a strategic psychological effect? **A successful air strike against Libya and Qadhafi could produce the following: (a) notice to all nations that the US would not tolerate state-sponsored terrorism, (b) notice to Qadhafi that his power was not absolute, (c) notice to anti-Qadhafi forces in Libya that the current actions of Libya could reap dire consequences for all, (d) a reduction in terrorist acts as Qadhafi and his forces would be forced to regroup, and (e) additional time to get other Western nations more involved in antiterrorist operations. On 15 April 1986, the United States, using Air Force and Navy resources, carried out a bombing raid on Libyan targets.**

The results of that raid among enemies:

- **Qadhafi instructed his operatives to deemphasize attacks on US military targets but to look for easier US targets (*Washington Post*, 4 May 1986).**

- **The Soviets contended that Libya's failed defense was a failure of men, not weapons-some Libyan officers were purged.**

- **The absence of any promised Soviet military support and the fact that the Soviet Union and Libya did not negotiate a formal treaty pledging Moscow to come to Colonel Qadhafi's aid demonstrates that the USSR was not willing to back up Qadhafi with more than words (*Christian Science Monitor*, 24 April 1986).**

- **There was a decline in Qadhafi's popularity-and some decline was already ongoing due to economic policy.**

- **The Soviets openly questioned Qadhafi's wisdom-a high Soviet official was quoted as saying "Khadafy is a madman on top of a pile of gold" (Washington Post, 24 April 1986).**

- **Syria publicly and openly rejected the idea that Syria has any connection with terrorist activities.**

- **The Soviets found themselves in a double bind: if they helped Qadhafi too much they would drive him further away from conservative Arab support. If they didn't help him, he might destroy himself and the Soviet foothold in the Middle East.**

Results of the raid among neutral nations:

- **Sixty-five percent of the French people supported the United States and were critical of their own government's nonsupport (Washington Post, 24 April 1986).**

- **Saudi Arabia rejected a Libyan appeal for financial aid (Washington Post, 1 May 1986).**

- **Several Arab nations, while delivering perfunctory denunciations of the United States, privately expressed congratulations. Two Arab countries didn't even issue any complaints (Iraq and Tunisia). Egypt's, Oman's, and United Arab Emirates' official responses were noticeably mild. The newspapers of Jordan and Tunisia did not run editorials on the action (Los Angeles Times, 27 April 1986).**

- **A Libyan call for an emergency Arab summit meeting resulted in Iraq, Jordan, Syria, and Saudi Arabia stating they would be unable to attend.**

The raid's results among friends:

- **There was strong support against terrorism at the Tokyo Economic Summit.**

- **European allies were persuaded to take basic concerted action against terrorism-a blow for reason as well as deterrence (New York Times, 24 April 1986).**

- **Despite an initial outcry, west European countries moved with quiet determination on four fronts: They kicked out a number of Libyan diplomats and suspected agents, significantly increased intelligence through sharing and coordination,**

encouraged their nationals to leave Libya, and quietly cut much of their trade with Libya (*Boston Globe*, 25 April 1986).

In terms of Colonel Qadhafi's own personality, he made no major radio, TV, or personal appearance for almost six months. On the 16th anniversary of his expelling the US from Wheelus Air Base, a major event in Libya to which the foreign press was invited to hear a major speech, Qadhafi did not appear. Fewer than 2,000 attended. Videotapes were presented, revealing an exhausted-looking Qadhafi fidgeting in his chair, speaking in a hoarse voice, and making a speech devoid of his usual fiery rhetoric. This lackluster performance reinforced the belief that' Qadhafi was slow to recover from the shock of the 15 April raid (*Time Magazine*, 23 June 1986). He began to reappear late in August 1986 in both public and TV formats.

The raid's effect on underlying dissatisfaction within Libya can be supported by the following comments:

- **Qadhafi is still in control but soul-searching is under way. He began relooking at Libyan efforts in Chad and Sudan. Some senior Libyan leaders have talked openly about a lower Libyan profile in terrorism** (*Washington Post*, 4 May 1986).

- **The US raid forced Qadhafi to share power with the four members of Libya's ruling Revolutionary Council** (*Time Magazine*, 23 June 1986).

- **A summary of several stories can equate to the notion that the raid may have strengthened Qadhafi in the limited sense that the masses may now not be ready to overthrow him. However, the regular officer corps and influential citizens may be more willing to attempt to modify his behavior.**

- **It should be noted that without US intervention, 10 attempts to remove Qadhafi by members of his military have occurred since 1980** (*Los Angeles Times*, 27 April 1986).

The reception of the raid by the countries of the world was to some extent known before the raid and should be judged more as action taken than in words spoken. The European allies, recipients of most terrorist acts carried out against the West, are always fearful of additional acts. Since the raid, there has been unprecedented security and the sharing of antiterrorist information. An economic summit took place in which terrorist

activities were discussed and meaningful ground rules were set up by the Western allies.

The raid on Libya appears to have been extremely successful as a psychological operation; yet it is doubtful that it was originally planned as a psychological operation. While any operation can have a psychological component, often that component is not a major consideration in planning and its effects are underestimated. If the raid had been originally planned as a psychological operation, the attack on Qadhafi's personal dwelling would have had to remain on the target list. But the tactical air strike would not need to be as accurate in a PSYOP mission. For example, the use of sonic booms and attacks on less-defended targets would most likely have produced the same results. However, in the final analysis, if senior planners considered the Libyan raid as a psychological operation, it achieved all its goals.

The Role of Military Psychological Operations in Support of National Antidrug Policy

Maj James V. Keifer, USAF, Retired

War does not belong in the realm of arts and sciences; rather it is part of man's social existence.... Politics, moreover, is the womb in which war develops.

-Carl von Clausewitz

The United States is engaged in a war against a drug culture that threatens to destroy the nation's social-political-economic fabric. The war is being fought on both domestic and foreign fronts against a culture of users and providers of illegal drugs. The national drug control strategy targets both supply and demand. National policy statements by Congress in the Anti-Drug Abuse Act of 1988 and by the president's 1990 strategy statement imply this to be a war of annihilation, but limited two- and 10-year goals make deterrence more realistically the objective of this strategy-detering illegal drug use and trafficking. The US military, as an instrument of national policy, has been brought actively-although with definite limits-into this engagement. To fight the war, the US military establishment has decided-or has had decided for it-to avoid using one of its most potent weapons: PSYOP. Ironically, the US government believes it is important to bring other psychological instruments on both domestic and foreign fronts. If this country expects to achieve victory over illegal drugs, biases against the use of US military PSYOP should be recognized and put aside.

Is the nation truly at risk? What is the national antidrug policy, and what are its priorities, goals, tools, and strategies? What is the role of the US military in pursuing national antidrug policy? How can US military PSYOP be employed to

support the war against illegal drugs? To answer these questions, this essay examines how our national leaders define the threat. It also reviews recent drug policy, strategy, goals, and objectives, concentrating on those roles in which the military and PSYOP are most likely to become engaged.

The Threat Defined

National Security Decision Directive (NSDD) 221 of 1986 defines international drug trafficking as a national security threat to the United States. With the signing of this directive, the president placed illegal international drug trafficking on the official agenda of the National Security Council (NSC). This action established a requirement for the secretary of state to coordinate, through the chiefs of missions, all drug-related assistance, information, and activities within foreign countries. The State Department also served as the link between Central Intelligence and insurgency. The Director of Central Intelligence (DCI) was assigned responsibility to collect, analyze, and disseminate intelligence on the trade of illegal drugs. The secretary of defense was tasked to manage military drug-related activities, including plans, operations, intelligence support, drug interdiction, training of foreign military counterparts, and other related support.¹

Even with the threat established, national policy and objectives were ambiguous at best. Activities reflected need for a national mechanism to coordinate interagency efforts and to provide expert, professional guidance. The political community saw the need for a clear-cut policy to attack the drug problem and put substance behind rhetoric. Things began to move-in the terms of Clausewitz, "If war is part of policy, policy will determine its character. As policy becomes more ambitious and vigorous, so will war."²

The President of the United States and the US Congress declared war on drugs with the passing of the Anti-Drug Abuse Act of 1988.³ This legislation established the National Drug Control Program (NDCP) and created the Office of National Drug Control Policy (ONDCP) within the Executive Office of the President, effective January 1989.⁴ William J. Bennett was named director of ONDCP to orchestrate the

activities of participating agencies that were contributing to the combined effort. His position was designed to provide guidance, consistency, and continuity, and to resolve jurisdictional disputes.

Bennett's assignment to head ONDCP, leading a serious combined interagency effort, and to implement a comprehensive program to fight a burgeoning social-economic-medical problem, signaled an increased resolve in antidrug policy. Legislation directed the ONDCP director to set policies, objectives, and priorities for the NDCP and to provide the annual national drug control strategy for the president's presentation to Congress by 1 February each year. Congress required the strategy to include both long-range goals and short-term (achievable within two years) measurable objectives. Further requirements were to (1) define the balance between expenditures for supply reduction and demand reduction and (2) submit a review of state and local government efforts to support the program'⁵

National Drug Policy

Responsible directly to the president for recommending changes in the program's organization, management, and budget, the director of ONDCP serves as the executive branch representative on drug issues before Congress. He or she coordinates and monitors the implementation, execution, and fulfillment of the program's policies, objectives, and priorities by designated agencies. When agencies' policies fail to meet the responsibilities required by the national drug control strategy, the director notifies the agency head and directs that measures be taken to comply. The director also serves as chief consultant to state and local governments on national drug control matters.

The Anti-Drug Abuse Act of 1988 provided the director with three principal subordinates: a deputy director for demand reduction, a deputy director for supply reduction, and an associate director to head a Bureau of State and Local Affairs. The president was responsible for nominating appointees to these positions. When confirmed by the Senate, they were prohibited from simultaneously holding other federal govern-

ment positions.? The act recognized "the magnitude of the illicit drug problem and the threat it poses [to the] national security of the United States."⁸ Disavowing proposals to decriminalize drugs, the act went on to say that "legalization of illegal drugs ... is an unconscionable surrender in a war in which, for the future of our country and the lives of our children, there can be no substitute for total victory."⁹ It then proclaimed, "It is the declared policy of the United States Government to create a Drug-Free America by 1995."¹⁰

The primary executive branch departments and agencies responsible for illegal drug supply reduction activities include the departments of Justice, Treasury, State, Transportation, Agriculture, Health and Human Services, Interior, and Defense; the Central Intelligence Agency, the Agency for International Development, the United States Information Agency (USIA), and the United States Postal Service. Those designated as primaries for demand reduction activities include the departments of Health and Human Services, Education, Housing and Urban Development, Labor, and Veterans Affairs. Additionally, the judicial system and various state and local agencies support the NDCP activities.

As the lead federal agency for the war on illegal drug trade, ONDCP was tasked to outline the national strategy, establish tangible short- and long-term goals, and coordinate and monitor those departments, agencies, and bureaus designated to take the battle to the enemy. The office published *National Drug Strategies* in September 1989 and January 1990. These documents served as the president's reports to Congress on the status of activities and intentions of the National Drug Control Program.¹¹

Prior to establishing the ONDCP, the Executive Office of the President had promulgated the *National Drug Strategy and Implementation Plan* of 1988. This document identified six presidential goals: drug-free workplaces, drug-free schools, expanded treatment, improved international cooperation, strengthened drug law enforcement, and increased public awareness and prevention. Strategy focused on reducing the supply of illegal drugs, both grown in and imported into this country, and on reducing the demand for illegal drugs in the United States. The plan characterized the drug problem as multidimensional,

involving medical, legal, security, economic, social, and educational aspects. The threat was defined in terms of drug type, production source, production increase, international cartel control, use of high technology, increased violence, and high-profit/low-risk crime.¹² President George H. Bush, in a September 1989 televised address to a nationwide audience, introduced the first strategy produced by the Office for National Drug Control Policy. His presentation outlined domestic and foreign objectives of a multifaceted attack on illegal drugs. On the domestic front, the president said the battle would be fought through programs of deglamorization, education, rehabilitation, and punishment. Foreign measures centered around programs of eradication, interdiction, extradition, and certification.

In his introduction to the 1989 *National Drug Control Strategy*, the director acknowledged that the national policy as articulated in the Anti-Drug Abuse Act of 1988—"it is the declared policy of the United States Government to create a Drug-Free America by 1995"¹³—is admirable but unrealistic.¹⁴ Bennett proposed in its place, "the highest priority of our drug policy must be a stubborn determination further to reduce the overall level of drug use nationwide—experimental first use, 'casual' use, regular use, and addiction alike."¹⁵

This report from ONDCP concluded that the situation concerning illegal drugs was deteriorating rather than improving. Crime, health, and economic factors pointed to a growing problem. (Evidence at the time—figures showing declining casual use—suggested that the problems were primarily caused by addiction.) On both the foreign and domestic fronts, illegal drugs were cited as being imminently available; and the problems were readily evident. Commenting on the need to put realism into the national antidrug abuse policy statement, Bennett charged that a de facto policy vacuum existed. He said it was time to accept the fact that the war on drugs, to be effective, would be protracted in both time and reach. Serious, coordinated efforts and significant resources were needed to get a grip on the demand for and supply of illegal drugs.¹⁶ Saying it would lead to a national disaster, Bennett articulated his adamant opposition to proposals for legalizing drugs.¹⁷

While building on the strategy from the Executive Office of the President, the 1989 *National Drug Control Strategy* was more than mere restatement of the 1988 plan. Unrealistic goals were rewritten and valid strategies were reorganized. The 1989 document outlined the national priorities as: (1) the criminal justice system, (2) treatment programs, (3) education, community, and business actions, (4) international initiatives, (5) interdiction activities, (6) research, and (7) intelligence. As mandated by the Anti-Drug Abuse Act of 1988, two- and 10-year objectives were listed. A statement on the process of implementing the national priorities was submitted with funding requirements. State- and local-level legislation initiatives were proposed to add consistency to activities below the federal level. The report articulated the importance of comprehensive information management to the program.¹⁸

The strategy recognized the contributions of a comprehensive information management program to the success of the antidrug campaign. In Bennett's introduction of the strategy, he expressed that coherent and coordinated policy-making depended upon the timely sharing of information. "Our national policy must be to maximize the sharing and use of relevant information among appropriate government organizations and to minimize impediments to its operational use."¹⁹ He focused on improving automated data-processing systems and command, control, and communications (C 3) networks. In this context, information management referred to the intelligence function and communications systems rather than programs to provide people with educational material or persuasive information.

While the 1989 *National Drug Control Strategy* outlined initiatives that targeted supply-side activities, no relevant clear-cut policy statement on them was articulated. To remedy this omission, Bennett stated in the 1990 report that "the policy of the United States is to disrupt, to dismantle, and ultimately to destroy the illegal market for drugs."²⁰

The 1990 *National Drug Control Strategy* was essentially a continuation of the previous year's strategy. Its major goals included (1) restoring order and security to American neighborhoods, (2) dismantling drug-trafficking organizations, (3) helping drug users break their habits, and (4) preventing

those who have never used illegal drugs from starting. The strategy again called for cohesive, multifront attacks on both the supply and demand sides of the drug problem. In addition, the program's purpose was (1) to reduce to the maximum degree possible illegal drug supply and availability, (2) to provide treatment for users of illegal drugs and to actively discourage people from becoming involved with illegal drugs, and (3) to provide robust enforcement of drug laws by holding traffickers, sellers, the money-laundering structure, buyers, and users accountable.²¹ National priorities for the strategy were directed as follows:

1. strengthening the criminal justice system,
2. expanding and improving drug-treatment programs,
3. developing programs to keep illegal drugs out of education systems, communities, and the workplace,
4. pursuing international initiatives,
5. enhancing interdiction efforts,
6. building on the research agenda, and
7. coordinating the intelligence agenda.²²

Both supply and demand aspects were targeted for attack by the criminal justice system through actions to deter the use of illegal drugs, to disrupt the trafficking network, and to arrest, prosecute, and punish drug criminals. The 1990 strategy reinforced the 1989 strategy, which called for dismantling trafficking systems by apprehending and prosecuting organization leaders and accomplices, and by taking away their illegally acquired wealth. The goal of additionally holding buyers, sellers, and users accountable was to make illegal drugs less desirable, more expensive, and harder to get.²³

The Office of National Drug Control Policy recognized that the US could not expect to unilaterally win the war against illegal drugs. The 1989 international strategy was designed to disrupt and dismantle the multinational criminal organizations that support the production, processing, transportation, and distribution of drugs to the United States and to other nations. Building on that strategy, the 1990 programs were aimed not only at drug-producing, transit, and consumer countries, but also toward nations still experiencing few or no problems with illegal drugs by helping to strengthen resolve and resistance to

use and trafficking inside their territories. The 1990 report articulated the need for international cooperation if objectives were to be met.

Three near-term goals the national strategy sought to attain in the international arena were as follows:

- 1. providing support to help strengthen the political will and institutional capabilities of three Andean Ridge countries (Colombia, Peru, and Bolivia) by enabling them to fight illegal drug-producing and drug-trafficking organizations in their respective countries,**
- 2. helping law enforcement and military structures of the three countries to combat cocaine trade more effectively, and**
- 3. incapacitating trafficking organizations that operate in the three countries. To ensure understanding of and to develop support for the measures, the 1990 strategy tasked that "U.S. information and public awareness programs will explain and support the attainment of the three goals outlined above."²⁴**

The 1990 strategy added a new dimension-the implementation of international public information initiatives to directly support other international policies and programs. "An active public information campaign will provide vital information to foreign publics, leaders, and government officials to build support for United States and host country actions to combat drug production, trafficking, and consumption."²⁵ Receiving policy guidance from the Department of State (DOS), the USIA (with support from other federal agencies) was assigned responsibility for coordinating and leading the international information effort. These initiatives focused on informing foreign audiences about the problems caused by illegal drugs with respect to their national security, economic welfare, and environment. International information programs were to educate foreign audiences about the consequences of using illegal drugs. Another initiative of the international information program was to describe the US domestic drug problem and the progress experienced in fighting it.²⁶

The 1990 *National Drug Control Strategy* included a commitment to long-term research in the fields of treatment, education and prevention, criminal justice, and drug use.

Research provided a base of knowledge for fighting the drug problem and a foundation for future strategies. Research projects included these:

1. developing enhanced databases on drug production and consumption, and on the economic impact of drugs, including cost/benefit analyses of programs designed to reduce drug use;
2. developing regional and state drug-related data to improve the analysis and accuracy of assessing drug control effectiveness;
3. expanding domestic programs to collect information on illegal drugs and their use;
4. increasing scientific and technological research projects focused on strengthening drug enforcement and interdiction capabilities; and
5. increasing research into drug treatment to emphasize complications caused by addiction, acquired immunodeficiency syndrome (AIDS), and pregnancy.²⁷

The intelligence agenda, designed to understand and fight illegal drugs better, included acquisition, analysis, and management of information. The National Drug Intelligence Center was tasked to coordinate, consolidate, and distribute pertinent information to appropriate agencies. Responsibility for coordinating and overseeing drug-related intelligence-gathering activities of the national foreign intelligence community was tasked to the DCI. The strategy required all members of the nation's foreign intelligence community to share data relevant to drug trafficking and drug-related money laundering. This included requiring DOD's intelligence components to actively support the collection of foreign drug-related intelligence requirements outlined in the *National Drug Control Strategy*.²⁸

To effectively manage the National Drug Control Program, ONDCP established coordinating mechanisms, developed report and study requirements, and set up systemic measures to oversee priority objectives. The Supply Reduction Working Group, the Demand Reduction Working Group, the Research and Development (R&D) Committee, and the Drug-Related Financial Crimes Policy Group were created to coordinate

interagency activities. Drug control program agencies were created within federal departments, agencies, and bureaus to manage the organizations' internal activities and serve as single points of contact for responding to drug issues. Lead agencies were designated to direct, coordinate, and provide expertise to specific activities. Management studies included the Executive Reorganization Study, the Department of Justice Reorganization Report, the R&D Facilities Plan, and reports on communications and automated data-processing initiatives. The Office for Treatment Improvement was created within the Department of Health and Human Services to lead the federal effort to improve the nation's drug-treatment activities. Information clearinghouses were set up in departments, agencies, and bureaus to access data readily. The National Drug Intelligence Center was established to oversee information management. Statutes were implemented at state and local levels to deny convicted drug offenders access to specific federal benefit programs. A programming and budgeting system was created within ONDCP. Model legislation on drug-free workplaces was provided to state and local governments.²⁹

Information management initiatives-developing command, control, communications, and intelligence networks-were built on the previous year's strategy. The only notable difference was in the change of the terms from communications to telecommunications. The strategy again focused on upgrading hardware, integrating systems, and providing means for secure communications. The DOD, as executive agent for implementing communications systems, created the Counter-Drug Telecommunications Integration Office within the Defense Communications Agency to serve as the focal point for all telecommunications activities related to the enforcement of drug policy.³⁰

An Assessment

Both the president (NSDD 211, 1986) and Congress (Anti-Drug Abuse Act, 1988) unambiguously articulated official positions that illegal drugs are a threat to national security. They agreed that the political objective, elimination of demand for and supply of illegal drugs, deserved an extensive effort and merited significant expenditure of resources. The problem

was identified in global terms with an objective to co-opt worldwide support for counternarcotics initiatives. War was declared-not the conventional sense of a military shooting war (although blood most certainly was to be shed), but one of police actions, economic sanctions, information activities, social programs, and other nonmilitary means.

The enemy in this war is the drug culture-drug cartels and drug users. The drug cartels cannot be likened to the contemporary economic entities; a cartel is a flexible system of organizations involved in growing, producing, transporting, distributing, selling, and money-laundering processes. High profitability has provided them an immense resource base. The cartels are motivated by profit rather than ideology. Users of illegal drugs cut across the full spectrum of society, from the homeless to professionals to influential leaders. The group includes both casual and addicted drug abusers. Their motivations for using illegal drugs are equally diverse.

Just as the war against illegal drugs is not fought against a conventional enemy, it should not be considered an ideological conflict. It is unlike most other political wars including the War on Poverty waged by the Great Society during the 1960s. Because the drug problem transcends many cultural boundaries, care must be taken to consider relevant issues such as social, health, safety, and economic factors, and to avoid morality issues. In seeking international cooperation, the perception of selling American values to other countries must be avoided. Actions and propaganda should be controlled, so as to preclude being tagged "Yankee imperialism" or "American hegemony."

The closest parallel we have to this war is the battle against alcohol that took place during prohibition-a war that was lost but that certainly compromised national objectives. Proponents of legalization can be expected to argue the logic of prohibition repeal in their efforts to sway the public to support such measures. The reasons for prohibition's failure must be understood if history is not destined to repeat itself. Care must also be taken in arguing against legalization to avoid the pitfalls of incomplete truths and invalid logic that cannot stand the tests of intense scrutiny or time.

The Anti-Drug Abuse Act of 1988, in declaring that national policy was to make a drug-free America by 1995, reflected election-year rhetoric. Remarkably, the political process that created this legislation didn't prevent the promulgation of a generally comprehensive³¹ and reasonably good product-but it did serve to dilute some of the potential it carried. While putting together a product calculated to appeal to the American public, members of Congress ensured that their power would not be diminished.³² Appropriately, the legislation directed attacks against both supply and demand of illegal drugs.³³ It also stressed both counterforce and countervalue strategies. With respect to one strategy that has been suggested by some-the legalization of certain drug offenses-Congress refused to compromise.³⁴ On the positive side, the single-point manager established a mechanism for coordinating efforts and resolving disputes. The requirement that leaders of the ONDCP not hold any other public office kept the president from appointing part-time people.³⁵ On the negative side, the political nature of the legislation tied the effectiveness of the program to (1) its position on the president's agenda and (2) its proximity to election day.

Supply-side measures receive the attention of Congress, but the trafficking of illegal narcotics isn't their exclusive target. Prevention and treatment programs for this legislation demand side attention. Certification requirements focus on governments of countries in which drugs are produced and through which they transit. Measures to break up money-laundering schemes put pressure on a shadowy support structure that helps the cartels to reap the huge profits of their trade. Opposition to decriminalizing illegal drugs, while supportive of the national policy stated by Congress, will eventually generate the requirement to produce facts from research to support this stance.

The most notable shortcoming of the legislation is the comparatively little formal authority given the director's position, particularly in the light of its extensive responsibilities. The director has few immediately assigned resources and only limited fiscal control. While Congress is expected to keep its control over the purse, authorizing the director to manage the

distribution of confiscated assets/ resources would provide the position with a significant carrot for resolving turf battles.

Most of the combatants in the drug war are assigned to the numerous supporting departments, agencies, and bureaus. With no formal control over them, the director must resort to convincing, persuading, or otherwise getting these supporting elements to do the work according to plans. Resolution of problems and conflicts tends to be a matter of Capitol Hill politics,³⁶ a personality-dependent requirement ideally suited to a person with good diplomatic skills. Disagreements of consequence must be resolved by the president or significant others in the Washington community. Further, few would argue that the director's position holds stature equal to such leaders as the secretary of state, secretary of defense, attorney general, or national security advisor. Not a formal member of the cabinet or the NSC, the director sits in only when the topic of illegal drugs is on the agenda.

Articulating the national policy for demand-side measures, Bennett's September 1989 *National Drug Control Strategy* changed Congress's declaration from unrealistic (drug-free America by 1995) to inconsequential (reduce overall level of drug use). Only one of the strategy's two- and 10-year goals³⁷ serves to measure the ultimate objective of the national policy statement for supply reduction to destroy the illegal market for drugs. The objectives and strategies formulated by the ONDCP represent a significant step forward from the Just-Say-No! domestic policy and interdiction instruments of the Reagan administration. Recognizing the complexity of the problem, the strategy addresses supply and demand, domestic and foreign arenas, law enforcement and prevention and treatment programs, counterforce and countervalue measures, and casual use and addiction. Quantified objectives are provided to measure some effects of the program. The two- and 10-year goals appear to be realistically achievable, even possibly unambitious. (Figures show a steadily diminishing demand for illegal drugs.) Bennett's uncompromising position on decriminalization is based on emotional grounds. Research needs to be directed to prove the validity of this position; that the effects of the drugs themselves, rather than their criminal status,

have accelerated and amplified social, economic, health, and safety decay.

The strategy outlined in the reports by ONDCP has many strong points. It states that one strategy alone will not win the war. Efforts to reduce the demand cannot be expected to work without measures against supply production and vice versa. The high profitability of drug trafficking will lead to aggressive marketing efforts by the cartels to counteract gains of demand-side programs. Interdiction efforts may thwart transportation networks and make smugglers think twice before trafficking the products, but cartels will fight these measures by cultivating new markets, developing new transportation strategies and transit routes for their products, and increasing rewards to their couriers. By the same token, supply-side measures alone can be unsuccessful. As long as drugs are available to tempt people, a portion of the population will use them. Treatment programs are extremely costly and none has escaped problems with recidivism. Incarceration is likewise costly and has hardly proved effective when not supported by other measures.

Research and development (R&D), essentially an investment process, is the primary way this nation will come up with different and improved ways to fight illegal drug use. It serves as the tool for innovating new ideas and technologies. The commitment to R&D acknowledges the long-term nature of the war against drugs. One of the foremost obstacles the ONDCP faces is a dearth of accurate, up-to-date information concerning illegal drug use. Previous surveys were conducted too infrequently and were of limited or irrelevant scope. They lacked sufficient scientific rigor to be reliable measures. This was one of the primary factors for understated program goals of the initial strategy published in September 1989. Funding for databases will enable them to be expanded and updated more frequently, increasing both the reliability and utility of the information gathered. Some R&D projects are being designed to improve the effectiveness of prevention and treatment programs by helping to reduce the demand side of the equation. Other programs are being advanced to improve technology for detecting drugs and for systems to compile, communicate, and coordinate information to help supply-reduction efforts.

Recognition of the need for international consensus is an important element of the program. Not only are bilateral agreements needed with drug production and transit countries to help them fight their internal enemies, but worldwide cooperation is also an instrumental part of finding a solution to this global crisis. Crop eradication projects will still take place, but the program has been deemphasized because of some counterproductive effects. (As drug-producing plants constitute the primary cash crop in many Andean Ridge countries, many farmers side with revolutionary factions, creating additional problems for their governments.)

Another key element to the strategy is the importance given to information, education, and publicity programs (essentially, programs of advocacy under politically palatable titles) on both domestic and foreign fronts. The success of information strategies relies on communicating in understandable terms the consequences of illegal drug activity. Some initiatives are designed to persuade nonusers not to start, users to seek treatment, and traffickers to cease their activities. Because international understanding and backing are imperative to the ultimate success of this program, other initiatives seek support from the world community for our national objectives.

The formation of coordinating committees is another program strength that promotes the sharing of ideas, resources, and information.³⁸ These committees establish mechanisms to prevent one agency from unwittingly doing something that conflicts with other efforts. This initiative improves cost-effectiveness and prevents potential fratricide. A notably missing committee is one to coordinate publicity, information, education, diplomacy, and persuasion activities of federal, state, and local agencies.

The strategy is not without its share of weaknesses. Because it is a long-range program, it will test the national patience of people who are accustomed to instant gratification. This constituency in turn will challenge the resolve of politicians whose primary concern is their own reelection. These same policy architects, if they don't perceive the threats-the threat drugs pose, and threats to reelection-as imminent, will most likely prove unwilling to commit sufficient assets over the long run to achieve success.

While expenditures have increased dramatically, the total program budget compared to low-end estimates of profits made by drug traffickers gives the impression that the administration is still trying to win votes rather than the drug war. This is particularly true because funding is dedicated to supply-reduction measures. Less than one-fifth of antidrug funding goes to prevention and treatment programs. Funding for prevention and treatment, as well as alternative programs, gets the short end of the stick when compared to the amount given to the interception of smuggled goods.

The strategy for providing support to state- and local-level government programs relies on the provision of matching funds by the lower levels to qualify for the federal money. This reliance depends not only on the availability of funds for these purposes but also on political popularity. To attract popular support to raise the taxes needed to fund these programs, results will have to be visible with high payoffs.

The inclusion of measurable objectives is laudable, but the selected objectives-with the noted exception of drug availability reduction-tend to measure only the demand side of the program. While this helps to dissuade "body-count" tactics, these objectives fail to measure the effectiveness of component strategies and programs.

The national policy of interrupting cartels as a departure point to their eventual dismantling and destruction implies a short-term goal of harassment. It serves to challenge cartels to produce new ways to circumvent measures. The absolute nature of the national policy-ultimately to destroy the illegal market for drugs-represents the objective of annihilation. If this is not wishful thinking but the true goal, then half-hearted measures will fail in the long run.

Bringing the military into the counternarcotics strategy was an expedient decision for the political leadership, but one the military leadership looked upon with skepticism. The political side saw it as a way of putting defense dollars to a tangible use. Political reasoning generally followed this theme: while ships and planes are out on training missions, they can be on the lookout for drug smugglers. The military establishment saw itself being dragged into a war with no measurable objectives; a war that could not be won. Through appropria-

tions bills, Congress provided funds to fight the drug problem, thus easing military apprehensions about taking the costs out of the operating budget. Defining the Defense Department's fiscal authority for 1990, Congress dedicated \$450 million to counterdrug activities.³⁹ This funding included \$28 million for R&D projects and \$40 million for catchall expenses defined as additional support to the Office for Drug Control Policy.^{40, 41} The bulk of the spending authority, \$182 million,⁴² was to support interdiction in its lead role of detecting and monitoring aerial and maritime smuggling activities. While the added fiscal authority generated interest, the lack of significant measures of effectiveness make military counternarcotics activities a, readily available political and media target. Coupled with operating restrictions, in spite of the loosening of the *posse comitatus* statute, DOD resources offer more potential than support. Its role as lead agency in the C 3 arena should easily show more cost-effectiveness than interdiction responsibilities when networks are completed and figures come in.

If national objectives in the war against illegal drugs are met, the achievement will ultimately be a psychological one. Activities must be carried out on both domestic and foreign fronts. They must target both supply and demand cultures, support counterforce and countervalue measures, and address prevention and treatment. National resolve must be communicated in clear and concise terms. Persuasion will require both action and propaganda.⁴³

For political reasons and other expediencies, these messages will have to be carried to their audiences by many different agencies. The 1990 strategy announced campaigns to provide information to foreign audiences. In the Anti-Drug Abuse Act of 1988, Congress established the requirement for the Office of National Drug Control Policy to activate a program to publicize the penalties for violating the legislation.⁴⁴ Agency turf battles during World War II and the American cultural distrust of the psychological instrument led to prohibitions against the USIA's communicating directly to a domestic target audience. Similarly, the *posse comitatus* statute and other restrictive measures prevent US military resources from conducting ac-

tivities intended to influence US citizens. Domestic programs, therefore, must be carried out by other agencies.

In the foreign arena, the psychological dimension must be exploited by all agencies involved in activities. Actions must be reinforced by publicity campaigns to ensure that maximum benefits are reaped. Successes must be underscored and punctuated, letting others know that alternatives exist and that consequences are in store for unacceptable behavior.

Co-opting the support of nongovernment special interest groups is another potential role for the psychological instrument. Informing the public of the harm illegal drugs do to the environment, the economy, the health, and ultimately the strength of a nation could serve to coalesce and polarize "watchdog" groups, directing outrage and magnifying public opinion against cartels and their support structures. For instance, environmental groups such as Greenpeace might find that the rape of the Andean Ridge ecosystem is a target for one of their campaigns. The focus of attention by television programs such as "60 Minutes" on chemical companies that exercise irresponsible management of precursor materials might cause them to rethink their motives for profit and to tighten control mechanisms.

The top echelon of the cartel structure is not invulnerable to psychological inducements. For all their wealth, they are virtual prisoners, unable to attain status or to travel any appreciable distance from their fortified homesteads. Psychological initiatives can highlight and amplify the social isolation these people face. Rivalries between cartels can be exploited, as can rivalries between ideology-motivated revolutionary movements and the greed-motivated cartels.

The across-the-board rejection of any form of decriminalization places an even greater demand on the psychological dimension. Diplomacy has been described as a process of political compromise between nations.⁴⁵ Because the drug culture has no national identity and because compromise has been determined unacceptable, diplomacy would seem to be limited to securing international cooperation from nations predisposed to strong antidrug policies. The goal is to convince people not to use illegal drugs, to convince cartels that it isn't in their profit-motivated interest to traffic illegal drugs, and to

convince the world community to act together to stop the trafficking of illegal drugs. Two overriding principles should guide the psychological effort: (1) truth is the best propaganda; and (2) words must follow action.⁴⁶

To support the first principle, the government needs to intensify its R&D studies to come up with irrefutable reasons not to decriminalize drugs. These studies should compare health and safety, sociological, and economic factors upon which illegal drugs are claimed to have an impact, comparing states and nations that have and have not decriminalized drugs. This type of research should then establish a mechanism to control the impact of the criminal status of drugs. Emotional appeals will, only have temporary effects on the behavior of their target audiences. A comprehensive interagency campaign using facts should be developed by a coordinating committee. Likewise, morality inferences concerning drugs must be carefully tailored to the morals of target cultures.

While it has been written that words are mightier than the sword, they must be based on substance. The principle that propaganda must follow action recognizes that the propagandist shouldn't make claims he is not willing to back up or promises he can't keep. Credibility is ideally established through performance of actions that serve as examples of what may be yet to come. This performance establishes both capability and resolve. If the government seeks to alienate cartels from their surrounding populaces by promising to reward and protect informants, it must be prepared to back up its words or suffer from challenges to its resolve.

Alternatives must be either available or provided. For instance, coca-growing campesinos cannot be expected to voluntarily stop growing a profitable cash crop without the assurance they will receive a reasonable price for harvesting something not considered illegal. Likewise, others throughout the cartel structure must see some viable way to generate an income if they are to be induced to get out of the drug-trafficking business.

Where then does the US military PSYOP community fit into the equation? First and foremost by ensuring that the actions of DOD (maritime and aerial interdiction and detection; monitoring and developing C3 networks) are favorably

communicated to the world community. This supports the premise of following actions with words-making would-be smugglers aware of the diminished likelihood of their success and profit, and broadcasting the nation's resolve to stop drug trafficking. Another role is in working with foreign counterparts to help them master the use of psychological instruments against illegal drugs. For countries whose military forces are used to combat drug traffickers, US military PSYOP forces can conduct seminars on the value of psychological operations, train their contemporaries, and participate in bilateral exercises to hone skills. For those countries whose enforcement agencies are civilian, US military forces can support USIA programs of assistance.

Direct measures to communicate with foreign civilian populations, while not out of the scope of possibility, are more appropriately the responsibility of the USIA. That doesn't preclude a military PSYOP role but suggests coordination of ideas, information, and efforts. This role can be particularly important because the lead agency suffers from a significant funding lack, given its responsibility to execute the national strategy.

If the US government is to destroy the market for illegal drugs successfully, the psychological dimension will be a significant factor. Military PSYOP resources can contribute to achievement of the national objectives, but only if they are allowed to be used. To that end, institutional biases will have to be broken. Ironically, such a breaking of biases is a psychological phenomenon. This process will include overcoming Western cultural fears of manipulation, resolving interagency turf battles, motivating the military establishment to consider nonlethal weapons, and educating the members of the media. These audiences must be made to understand that psychological activities are amoral,⁴⁷ that they support national policy, and that advances in technology have made far-reaching communications faster and stronger.

Dyer states the need for a national college to educate leaders on the nature of the instrument and how it helps them to implement policy.⁴⁸ The public, he says, "must be educated on what these activities are and how they contribute to functioning of the government."⁴⁹ Within the military community, education on the psychological dimension needs to be expanded. In

addition to courses of instruction at the Air Force Special Operations School at Hurlburt Field, Florida, and the US Army John F. Kennedy Special Warfare Center and School at Fort Bragg, North Carolina, blocks of instruction should be included in service academies and in professional military education courses at all levels. The Defense Information School at Fort Benjamin Harrison, Indiana, should include psychological operations orientation in its military public affairs training curricula. Select members of the media should be invited to attend military orientation courses.

Bennett resigned from his position as director, commenting that he had accomplished what he had set out to do. Acknowledging that the war was not yet won, he offered that indicators were showing great promise.⁵⁰ His abrupt departure provided focus on a national program whose status was being subordinated by events in the Middle East. The war is still far from over, and it will not be over until the national policy is achieved or rescinded. While national policy is likely to undergo redefinition, particularly as accurate and up-to-date information enhances the nation's databases, rescission is unlikely. Changing peoples' attitudes, opinions, and behavior will be a long-term psychological process—a process to which the military PSYOP community has much to offer. The sooner political and military leaders recognize this, the sooner the problem will be resolved.

Political-Psychological Dimensions of Counterinsurgency

Gen Richard G. Stilwell, USA, Retired

This paper concentrates on the psychological aspects of conflict because the psychological dimension deserves discrete treatment as the least appreciated dimension-and the least employed-by the United States and most of its allies. Conflicts erupt among groups of men, nations, or coalitions of nations from collision of aims or objectives for which the antagonists are prepared to fight and die. The conflict ends, at least temporarily, when one side makes the decision that there is more to be gained-or less to be lost by allowing the antagonist to prevail. The side that desists has simply lost the will to continue the conflict.

An adversary's will can be eroded and broken in a number of ways: by military force (the application, or threat of application, of violence); by economic strangulation; by loss of external support; by apathy; and by military defections. Normally, it takes a combination of these to bring about an adversary's calculus that the "jig is up." Sometimes, one master stroke will suffice. Hopefully, nations can resolve the issue without the application of military force. To win without fighting, in the words of Sun Tzu, is "the acme of generalship." Any political leader or military commander should accomplish the mission in the most expeditious fashion and at minimum human cost.

The term psychological warfare (psywar), for all its shortcomings, succeeds in combining two meaningful subjects, both as old as man. Certainly, it is better than psychological operations which, as my mentor Paul Linebarger once said, leaves the issue entirely neutral. Psychological warfare seeks to achieve the objective where military force is unavailable or

inappropriate, or where it can combine with the military to minimize expenditures while maximizing effects.

The Old Testament's "Book of Judges" provides one of the earliest and most effective examples of psychological warfare. Gideon-an imaginative fellow-and his troops were on the verge of being annihilated by a Midianite force of vastly superior strength. The Midianites were encamped in preparation for decisive assault on the morrow. But Gideon had an inspiration: Since the basic fighting unit of all armies in the thirteenth century B.C. was a 100-man formation, each with one trumpeter and one torch bearer, he reckoned he could create the impression of a 30,000-man force with 300 men properly equipped. Gideon selected 300 men and provided each with a lamp, a water pitcher, and a trumpet (we are not told where he found the extra trumpets!). At nightfall, he had the 300 light their lamps (which were placed inside the pitchers so as to hide their light) and deploy at designated intervals around the Midianite camp. On his signal, they all broke their pitchers, lighting up the perimeter, and blew madly on their trumpets. The Midianites were startled out of their sleep and their wits. They fought among themselves, then gave up and retreated. (The Hebrew chronicler gives credit for this to the Lord!)

Gideon's deception is not an isolated example, as any serious student of ancient military history can confirm. Psychological warfare seeks to persuade by nonviolent means. By its very nature, psychological warfare is open-ended; it defies an accurate all-encompassing definition. The best descriptor-although by no means all-inclusive-is propaganda, which unfortunately, has severe political handicaps on the American domestic scene. It ought not be in such disrepute; after all, it derives from the name of that department of the Vatican Curia which had the duty of propagating the faith. Propaganda is simply the *planned* use of any form of communication designed to affect the minds, emotions, and actions of a given group for a specific purpose. This is precisely the aim of what we see on the television screen at all-too-frequent intervals-a field of endeavor in which the United States is preeminent.

So, psychological warfare is really not all that esoteric or mysterious. Whether in support of the national security or for

the profit of shareholders, the effectiveness of propaganda depends on adherence to four basic ground rules: a clear-cut aim or purpose, a well-defined target audience, a credible message, and a reliable means of communication or dissemination. Gideon met these criteria in spades. His aim was to demonstrate that he had been greatly reinforced; his target audience was the immediately opposing army; the established rules of counting made his message credible; and the light and noise ensured that the message was received. To be sure, it is rarely that easy; or as quickly mounted; or as clearly measurable.

The American View of Psychological Warfare

The psychological weapon has never been accepted as a permanent instrument of national security policy by the executive branch, the Congress, or the American people. Its use, under various names, has been supported as an essential expedient only in periods recognized as war. To be sure, in the early days of the cold war, there was considerable enthusiasm for institutionalizing a national structure and capability to exploit international communications as a psychological tool in furtherance of national policy.

The concept was never implemented, due in part to substantial differences within the executive branch about the value and propriety of this genre of activities. These differences precluded the enunciation of an integrating doctrine and the necessary coordination of departmental programs. In greater part, however, the failure to implement was due to the American character, which is at once idealistic and pragmatic, distrustful of political intrigue, and impatient for quick solutions. These traits are reinforced by the rather simplistic and innocent view of the world that most Americans have.

For these reasons, instances of US attitudinal readiness-and US capabilities-to engage in psychological warfare have been rare, coinciding with the two world wars. Those efforts were indeed national because the target audience conspicuously included the American public itself. But while psychological operations in the two world wars (particularly the British in World War I) provided important support, they were not

crucial to the final outcome. Those conflicts were waged militarily, with political and psychological assistance.

Wars of national liberation reverse the weighting of factors. They are fought politically and psychologically, with the assistance of military capabilities. They integrate political, psychological, social, and military aspects to exploit national vulnerabilities, erode all national institutions, and support an eventual insurgent takeover. Their choice of weapons puts a conventional high-technology force at a disadvantage. The psychological challenge is explicit in the hallmarks of the insurgent force: its tight, inner political structure; the strong motivation of all ranks; the ability to find concealment within the civil population; and identification with one or more popular causes.

Past Experience in Counterinsurgency

The wars of national liberation that have erupted in the third world over the past four decades document the crucial role of the psychological weapon in determining the final outcome. Not all involved the United States, even indirectly; but all were replete with useful lessons for those perceptive enough to appreciate and assimilate them. In those instances where the United States was in some way engaged, its record in exploiting the psychological dimension is uneven. Two examples will serve to support this judgment.

The Philippine government campaign against the Huks in the early 1950s stands as a model of the imaginative employment of psychological warfare, strategically and tactically. The charismatic and insightful Secretary of National Defense, Ramon Magsaysay (who was later to become president), and a small cadre of exceptionally gifted US advisors, achieved spectacular success in arresting the momentum of the insurgency and then breaking its back with a wide-ranging series of programs which integrated military, political, and psychological actions. Most of the ideas and initiatives were conceived by the advisors, but-and this is important-the detailed planning, the message content, and the operational execution were all Filipino.

Magsaysay knew instinctively that the key to defeating the guerrillas was to deprive them of support within the rural population and to swing that support to the government. He also recognized that the soldier was the most visible symbol of government in the countryside and that the government would be judged by the actions of its soldiers.

As a first order of business, therefore, Magsaysay set about reindoctrinating the entire Philippine army. Its multiple roles were protector of the people, guerrilla fighter, and contributor to the morale and welfare of the civil population. He made this indoctrination meaningful by promoting only those who were demonstrably effective ambassadors of good will and were also effective combat soldiers. He provided rations for the troops that were adequate not only for their own consumption, but also for donations to villagers in dire need, and he made extensive use of medical and engineer personnel for civic actions of the most basic sort. Finally, Magsaysay established a "hotline" to his immediate office for complaints about troop malperformance and a staff to immediately investigate those complaints in the field, convincing one and all that he was serious about making the army a credible symbol of good and caring government.

Every effort was made to publicize, nationwide, the new order in the army and what was being accomplished thereby. To accomplish this, Magsaysay used press releases, unit newspapers for troop consumption (and for subsequent distribution to local civilians), movies of operations and civic actions (for showing in remote areas by civil affairs officers), and traveling road shows. Programs to win the support of civilians were complemented by others directed at the insurgents themselves.

One such program provided surrenderees (and even those who had been captured) the wherewithal to start life anew for self and family: substantial acreage in a resettlement area and a loan of building materials, tools, food, and seed. This program stimulated many surrenders, but its indirect effect was even greater. Much of the population had supported the guerrillas because their avowed motive was to gain "land for the landless." When it became apparent that the objective

could be achieved without fighting, the moral obligation to support the guerrillas disappeared.

A second program involved liberal rewards for the death or capture of Huk leaders who were brought in or killed by their own comrades. The principal values of this program lay in widening the gulf between civilians and guerrillas, and in heightening hostilities within the guerrilla ranks. Accompanying these major programs were more specifically targeted initiatives: appeals from mothers to their guerrilla sons; rumors to destroy the credibility of those politicians who were deliberately obstructing the Magsaysay programs; widespread distribution of posters exposing Huk leaders as criminals wanted for documented murder, kidnapping, and rape; and exploitation 'of native superstitions.

The concomitant of steadily increasing popular support for the government-as symbolized by the army in the field-was better intelligence and more effective operations against the guerrillas. By 1953, the insurgency was no longer a menace to the national security of the Philippines.

What lessons can be drawn from the significant contribution of psychological warfare to the success of the Philippine counterinsurgency campaign? One is that Magsaysay had his priorities right. In most third world countries, the soldier in the field is the embodiment of the government. His conduct will determine the nature of the relationship between the population and the government in rural areas. The soldier must therefore be made the most useful symbol possible, demonstrating the moral justification for government. It is a nondelegable command responsibility, at all levels, to ensure this.

Another is that several factors combined to swing popular support to the government through actions of the Philippine military:

1. leadership and command emphasis (notably including careful indoctrination of the soldier);
2. a dedicated element in each headquarters to plan and supervise implementation;
3. psywar programs carefully tailored to the attitudes and needs of the groups at whom targeted; and

4. quality advisors with the professional competence, empathy, and passion for anonymity to gain and maintain access to the decision makers.

No one spent any time attempting to define boundaries of, or responsibilities for, conduct of psychological operations. It was everybody's business to support the overarching aims: develop confidence in the government and render the insurgency futile. This was achieved by the remarkable integration of concrete and useful actions, increasingly effective field combat operations, and support from information/psywar initiatives.

Vietnam was an entirely different story. There was an illuminating exchange between Col Harry Summers and a North Vietnamese officer in Hanoi during the prisoner of war exchange negotiations in 1973. Summers made the point that the American army had never been bested in battle to which the response was "Quite true, but that is totally irrelevant." The communists' political and psychological campaigns were decisive-on the international scene, within the American body politic, and in-country. The tragedy is that our failure to mobilize international and domestic support for the Nicaraguan Freedom Fighters mirrored our Vietnam experience in those key arenas.

A comprehensive and authoritative account of psychological operations in Vietnam has yet to be compiled. When accomplished, it will record some brilliant successes at the tactical level and some failures at the strategic level. The latter included an inability to cope with the impact of modern mass communications (history's first televised war); the lack of psychological/ political actions to condition audiences and establish context for major military activities as, for example, the invasion of Cambodia; inability to erase the perception that it was our war, not a South Vietnamese war; and ineffectiveness of advice and resources devoted to aid the government of South Vietnam to make its case, improve its image, and enhance its performance on and off the battlefield. Responsibility for these failures did not rest solely-or even predominantly-with Joint US Public Affairs Office (JUSPAO). It was shared with the political and military leadership in Washington and in-country, with United States Information Agency (USIA)

ambivalence about the merits of psychological warfare and its role therein, and with a military educational system that failed to inculcate in all ranks the fundamental tenets of counterinsurgency.

This evaluation in no way denigrates the dedication of the JUSPAO leadership and members. And, in all fairness, even programs of heightened impact would not have resulted in a different final outcome. Psychological warfare can enhance political, social, and military programs; but if those programs are seriously deficient, it cannot erase their faults.

The differences between the Philippine and Vietnamese experiences are dramatic.

- **In both cases, the key objective was to win the support of the population. In Vietnam, that objective was not achieved. Admittedly, the Vietnamese government faced much more difficult challenges, explicit in a more numerous, better organized, more deeply imbedded, and more highly motivated opposition.**

- **Unlike in the Philippines, psywar personnel in Vietnam did not have direct and continuing access to the top political and military leadership or to the high-level planners. A number of first-class research projects, which were developed by social scientists, political psychologists, and cultural anthropologists, constituted guidelines for effective psychological initiatives. For the most part, these projects were simply filed.**

- **The Philippines' psychological programs were indigenous in content and means of communication. In Vietnam, impatience (to which short tours contributed) stimulated the Americans to do too much themselves. Not only was this conceptually wrong, it was also operationally ineffective because most of the Americans involved had no more appreciation of the political and cultural realities of Vietnam than we did of Lebanon in 1983.**

Prospects for the Future

As the decade of the sixties ended and that of the seventies began, many observers believed that the United States would develop a comprehensive and prudent doctrine for psychological

operations. In fact, some thought, the government would have no choice but to do so. Some even thought there would be extensive research to determine the most efficient and effective methods of applying psychological techniques and weapons.

Alas, it was not to be! The United States is still without the requisite national doctrine. Worse yet, there is less acceptance of the legitimacy of psychological warfare as a tool of statecraft by the State Department and the USIA than was the case in 1970. There has been scant modification of the long-held view that the conduct of psychological operations is an exclusively military task-appropriate in war, but deplorable in peace. The recognition has not dawned that such activities are fundamental to effective counterinsurgency efforts and must be primarily conducted by non-DOD agencies.

There have been some modest advances under the current administration. In 1984, a landmark National Security Defense Directive (NSDD) established international communications as a major instrument of national security policy and assigned specific tasks to executive departments and agencies. Only one section dealt with psychological operations-and then solely in a military context. It directed the revitalization of the armed forces' capabilities to conduct such activities in support of military operations in crisis and in war. Typically, the NSDD did not establish any effective interagency mechanism for orchestrating and coordinating the various international communication capabilities.

Using the NSDD as leverage, the secretary of defense directed the preparation of a Psychological Operations Master Plan (which he subsequently approved in toto). Its purpose was to remedy the deficiencies that had developed since Vietnam-deficiencies in force structure, operational concepts, planning, research, training, intelligence support, personnel programs, and understanding the potential of psychological operations as a military force multiplier. The plan included these important actions:

1. JCS development of a comprehensive joint doctrine to cover employment to strengthen deterrence, in crisis and in war, as the foundation of the revitalization effort;

2. augmentation of planning capability on major combatant command staffs;

3. functional separation of special and psychological operations at staff and organizational levels, formally recognizing that the latter is inherent in all military activity across the spectrum of conflict;

4. reindoctrination of the officer corps through appropriate instruction within the mainstream service school systems and including psychological operations in training exercises;

5. modernization of equipment and force structure; and

6. most significant of all, the phased development of a Joint Psychological Operations Center as the font for doctrine and conceptualization, for the direction of research and analysis, for planning support of the unified and specified commanders, and for assistance to the secretary and the chairman in developing defense positions on national psychological plans and campaigns.

It will take much hard work and continued command prodding to see these initiatives through to fruition. Absent an institutionalized mechanism at the national level, the psychological dimension of contingency planning is handled on an ad hoc, fragmented basis. DOD has repeatedly urged the establishment of a national psychological operations committee, which would, inter alia, do detailed planning for the marshaling and orchestration of all government and quasi-government communication capabilities in support of military contingency plans or external crises short of direct military involvement.

It is understood that the concept of the committee has been approved in principle, but has not been activated due to the strong reservations of the USIA. Conceivably, the congressionally mandated Board for Low-Intensity Conflict at National Security Council (NSC) level will provide impetus for the interagency psychological operations structure as an essential adjunct for sound planning.

Meanwhile, one Army unit (the 4th PSYOP Group) strives valiantly to plug the national gap. It has produced excellent how-to-do-it plans for focusing all relevant national capabilities in support of several countries under threat. The professionalism

of the group is gaining recognition in key sections of the national security community. Both the group's planners and its colleagues on the ground can take much credit for the improvements that were wrought in the Salvadoran army.

Clearly, we are ill-prepared for the psychological dimension of the next major counterinsurgency that will engage the United States. The guidelines for enhancing performance are the major lessons gleaned from our past experience.

The first guideline--a truism meriting underscoring--is that the message communicated must be indigenous in content and in execution, leastwise within the confines of the supported country. The United States will have major tasks in ensuring political support for a beleaguered country on the international scene and here at home. In-country, the burden will fall on the shoulders of a few carefully chosen and highly qualified individuals who will operate in an advisory role, either formally or informally. The proportions of civilian and military advisors must be aligned to the structure of the host government; and while under the general supervision of the chiefs of the US Diplomatic Missions, they must work with and for their foreign colleagues.

Collectively, the US advisors must have a profound knowledge of the country--its culture, its customs, its political and social substructures, and the characteristics of its population. To ensure that depth of confidence, the group must be reinforced by--or be able to draw on the support of--the expertise of sociologists, clinical psychologists, and cultural anthropologists. They must, of course, be equally well informed about all aspects of the insurgency, its operating methodologies, its motivations, and its vulnerabilities. The challenge--a cross-cultural one--to those advisors will be to help the supported government shape and articulate value-based themes to which the population can relate. They must then ensure that all actions of the government and its personnel are consistent with--and reinforce--those themes.

A second, closely related guideline is to eliminate the mind-set that the practice of psychological warfare is the province of odd fellows steeped in the occult. To be sure, there are pressing requirements for full-time specialists and dedicated (albeit all-purpose) equipment. But these requirements deal

with only a portion of the psychological dimension in counter-insurgency: the detailed target research and analysis within both the native population and the insurgent structure; analysis of, and counters to, insurgent propaganda; and the offensive against the insurgents to confuse, confound, exacerbate vulnerabilities, and induce defections.

That sector aside, psychological operations (how badly we need other terminology) do not have a separate compartment. They may at times be a part of public affairs, civic action, troop information, civil affairs, public diplomacy, humanitarian aid, or political action. As exemplified by the campaign against the Huks in the 1950s, everyone can and should aid in the psychological enhancement of all programs to gain and maintain the allegiance and support of the target audience: the population itself. The sine qua non for attainment of that objective are concrete programs that are sound in design, sound in content, and professionally implemented.

The complementary-usually crucial-task is to multiply the impact of those programs and underscore the relevance of those programs to national aspirations. Completion of this task will require unceasing exploitation of every medium of communication, from ensuring the proper deportment of soldiers in face-to-face contact with villagers to sending traveling shows throughout the countryside to presenting sophisticated TV programs.

Conclusion

My advocacy of the extraordinary importance of the psychological dimension at any level of conflict notwithstanding, I am not sanguine about our government's capacity to exploit this nonintrinsic instrument of national power (or, indeed, even to comprehend its potential for enhancing national security).

Most worrisome is the failure to recognize-let alone take measures to counter-psychological and political warfare waged against our policies with the intent to undermine them; here, the cost of inaction is real and heavy. The stark fact is that the American public, the media, and even the bureaucracy, are generally oblivious to the scope and sophistication of this genre.

South Africa commanded center stage in Western consciousness because there was a spectacularly successful (and still ongoing) psychological warfare campaign. It was carefully orchestrated, replete with misinformation, and aided and abetted by our own gullible media. The Sandinista regime in Nicaragua had similar success. Thanks almost exclusively to the efficacy of its propaganda, there was more active support among the American public for the Sandinista regime than for the freedom fighters that our own government backed. Awareness that the integrity of our own political and decision-making base is under threat should lead to actions that would expose and neutralize our adversaries' efforts. Hopefully, such awareness will stimulate utilization of psychological and political warfare initiatives to further the positive goals of American foreign policy.

The Psychological Dimension of the Military Element of National Power

Maj James V. Keifer, USAF, Retired

War does not belong in the realm of arts and sciences; rather it is part of man's social existence.... Politics, moreover, is the womb in which war develops.

If war is part of policy, policy will determine its character. As policy becomes more ambitious and vigorous, so will war.

-Carl von Clausewitz

The six-month Persian Gulf War, popularly called the One-Hundred-Hour War, recently took us through the continuum of the policy process. Economic sanctions were applied by a world community united with a degree of resolve seldom seen; but because these actions take time, and time favored Saddam Hussein, they were never given the opportunity to prove their effectiveness. Through diplomacy, essentially a government-to-government process of negotiation and compromise, the political leaders of the world tried to defuse the situation. Because both sides held nonnegotiable positions, with no room for compromise, the prospects for a diplomatic solution were nonexistent. Diplomacy did, however, play an instrumental role in uniting coalition forces. Was a peaceful resolution out of the picture? It evidently was!

While the political and economic elements of national power played out their hands, two others came to the forefront. These were the military and the psychological elements. These two elements, working together, seemed to constitute our best opportunity for a peaceful resolution; and after failing to achieve a peaceful solution, these two elements worked together to enable us to win, win quickly, and win with the least possible bloodshed and destruction.

How could the military instrument offer a peaceful solution? By itself, not at all. However, with the psychological element ... ?

At the turn of the century, under Theodore Roosevelt's motto, Walk Softly and Carry a Big Stick, the United States practiced a policy called gunboat diplomacy. We built a reputation for "sending in the Marines" to achieve our national objectives. After a while, all we had to do was steam a ship to the coast; through intimidation, we achieved our objective.

Turning now to the recent Gulf conflict, we hoped to persuade Saddam Hussein to unconditionally withdraw from Kuwait through our military buildup in the Middle East. We felt that our recent excursions to Libya, Grenada, and Panama would certainly have impressed upon Saddam that we had the ability and resolve to settle the score militarily. And part of the psychological factor was Saddam's knowledge that his forces were equipped with hardware that was no match for our high-tech weapon systems. Another psychological factor was that, while Saddam didn't mind sending tens of thousands of Iraqis to martyrdom, he had no intention of becoming a martyr himself. The world community isolated Saddam and communicated unity on the issue through strategic psychological operations. Through theater PSYOP, we tried to convince him that it wasn't worth the cost to fight for a losing cause. Unfortunately, Saddam wasn't convinced; and neither were the Tikritis who supported him.

The psychological dimension played an important role in limiting the loss of lives and property. On the field of battle, we wanted to face an enemy who was unsure about his cause and capabilities but sure about his impending doom; an enemy who, even if unwilling to surrender, had little will to engage in combat. Through tactical PSYOP, we hoped to convey to the Iraqi military the futility of their position; we succeeded.

In the Middle East, the Andean Ridge, the Philippines, and throughout the world, the psychological dimension plays an important role in the achievement of national objectives. It serves the same purpose, and can be likened to, the aggressive marketing campaigns of Madison Avenue; that is, to affect the behavior of a target audience. Where Madison Avenue sells products and services, psychological operations sell ideas and ideology.

It's safe to say that all governments throughout the world make use of psychological tools during peacetime as well as during war. Activities are organized at two levels: international (we call these publicity, public diplomacy, and psychological operations) and in-country (we call these publicity, public relations, and public affairs).¹

The use of any and every element of national power carries with it psychological effects.² To this end Murray Dyer wrote, "the highest levels of government now recognize that in any decision on national policy there are psychological factors that must be taken into account."³ He cited the psychological dimension's cutting across departmental boundaries as the reason for an ongoing turf battle between the Department of Defense and the Department of State for control of the psychological instrument.⁴

The term *national power* describes the ability of a nation to influence other nations.⁵ Deterrence, a fundamental national security objective of the United States for years, is essentially a psychological phenomenon.⁶ Potential enemies perceive the cost of attack to be far greater than any possible gains. The assessment is based on the perception of this country's capabilities and resolve. Military psychological operations reinforce this perception by clarifying and repeating it. Edward N. Luttwak says it is an important message-one that must be communicated across the range of social and economic classes.⁷

Ronald D. McLaurin, author of *Military Propaganda: Psychological Warfare and Operations*, says that the reason for much of America's diplomacy and policy, both actions and words, is specifically to influence the behavior of other governments.⁸ Martin Wright distinguishes diplomacy from propaganda:

Diplomacy is the attempt to adjust conflicting interests by negotiation and compromise: propaganda is the attempt to sway the opinion that underlies and sustains the interests. Conversion therefore undercuts the task of compromise.⁹

How does the military element of national power support the psychological dimension? One fundamental foreign policy objective is to concentrate and optimize power. Other things equal, a nation that can back up its policies with coercive force holds a distinct advantage over less-capable nations. The

projection of power is a central concept of international relations. Luttwak states that power, the influence of one state over others, may be measured in terms of the perception of the audience. To be effective (powerful), perceptions are precisely what foreign policy must affect.¹⁰ The projection of US military power is often used as a force of political persuasion.¹¹ Such activities as port visits, bilateral exercises, firepower demonstrations, and special deployments help project power, as does the high-technology aura of US military hardware. Propaganda can be used effectively to reinforce and intensify these measures, but it must be carefully crafted to prevent counter-productive perceptions.

How, then, do psychological operations support strategic military objectives? The ability of nations to gather information, and to assess and interpret its relevance, isn't equal; what is perceived can be quite disparate from reality. With effects multiplied by differences in culture, experience, and expertise, the gap between perception and reality-misinterpretations-can lead to the misunderstanding of intentions, problems in resolving differences, and other dangerous situations.¹² Psychological operations bridge the gap.

If psychological operations are so important, why do they carry the stigma that seems to be attached? In the foreword to *Political Warfare and Psychological Operations: Rethinking the U.S. Approach*, Bradley C. Hosmer, president of the National Defense University, observed that "the negative connotations in the West of the word propaganda suggest we have treated political war as incompatible with democratic values and traditions." Frank R. Barnett, in the afterword to the same book, expressed also that "some would argue that the ethics of democracy preclude too strenuous a concern with propaganda." These statements unmasked American cultural bias toward the terms *propaganda* and *psychological operations*. Dr Carries Lord, in "The Psychological Dimension in National Strategy," also noted this phenomenon:

Manifest or latent in the attitudes of many Americans toward the practice of psychological-political warfare is a distaste for any sort of psychological manipulation or deception. The idea that psychological-political warfare is a black art that can be morally justified only under the most extreme circumstances is a derivative of

such attitudes. That such activities necessarily involve misrepresentation or deception is in any case far from the truth. But even assuming that some such element is inseparable from effective psychological-political operations, the moral calculus is by no means as clear as is frequently made out.¹³

The American attitude toward fair play reflects a disaffection for the use of any psychological manipulation. Gen Robert C. Kingston, commenting on "Political Strategies for Revolutionary War," by Richard H. Shultz, Jr., attributes this apprehension to past abuses of psychological tools by totalitarian regimes: "Many people in this country think that psychological operations equate to the Big Lie, suggestive of Goebbels and Hitler, and that we should not use it."¹⁴ The late Gen Richard G. Stilwell, USA, Retired, provided comments on the institutional reluctance to consciously resort to perception for influencing activities. "The psychological weapon (and the political premises which govern its employment) have never been accepted as a permanent instrument of national security policy by the Executive Branch, the Congress, or the American people."¹⁵ Cultural will, readiness, and the ability to conduct psychological operations have tended to surface only during wars. Ironically, it has been during wartime that the American public has become a primary target audience for national nonmilitary psychological operations.

Dr Lord credits the American media with helping to intensify cultural biases of the public through implications that underhanded objectives or purposes constitute the basis for such activities. He notes that claims of disinformation or public lies are often attached to media comments on psychological activities.

Dr Lord writes that the employment of psychological tools is further hampered by systemic weaknesses of the bureaucracy. From the top, he says, inadequate strategic planning and decision making prevent PSYOP from being considered, much less employed. The US diplomatic, military, and intelligence establishments distrust and resist any use of political-psychological warfare. Dr Lord charges that the State Department hasn't changed its diplomatic techniques in 200 years, ignoring the shrinking of the world brought about by dramatic advances in communications technology.¹⁶

The Department of Defense doesn't escape Dr Lord's criticism of institutional bias; he contends that, for reasons that are both similar to and different from those of State, military leaders have likewise tended to overlook the value of the psychological dimension, particularly outside tactical applications:

The military services, in their preoccupation with technology, major weapon systems, and the big war, tend to neglect low-cost approaches to enhancing operational effectiveness, especially at the lower end of the conflict spectrum; and they tend to regard political-psychological warfare as someone else's business.¹⁷

Even the PSYOP community itself has struggled with its name for years, proposing such terms as *perception management*, *public diplomacy*, *political communication*, *influence operations*, and *international information*. In his article "By Any Other Name" in *Perspectives* (the magazine of the Psychological Operations Association), Col Thomas Taylor offered the title "Perception and Deception," suggesting the acronym, P&D.I.⁸ Lt Gen Michael Carnes, director of the Joint Staff, urged a name change in his address to the Psychological Operations Association at the 1989 Worldwide Psychological Operations Conference, commenting that "you can't call soap 'dirt' and expect it to sell."

This struggle for a new name begs a couple of questions. General Carnes's "soap/dirt" analogy is faulty. First, the term *psychological operations* is amoral and the community is not responsible for bias against it. It would be more to the point that people think of "earth" or "topsoil" in terms of *dirt*, *filth*, or grime. And second, terms considered more acceptable-politically and popularly fail to aptly describe the activity. A soldier in the battlefield making loudspeaker appeals to the enemy is not performing "political communications" or "international information."

Personally, I don't find the terms *psychological operations* or *propaganda* objectionable. What is needed is to market these words so that their pejorative connotations die out. Psychological operations help to save lives by using words, instead of bombs and bullets, to deter, or in the failure of deterrence, help win wars. In *The Weapon on the Wall*, Murray Dyer opines that the profession "is an honorable and important means, ranking with instruments of diplomacy, the military art, and

economic measures." 19 One of his premises states that this discipline is a reflection of free will, a factor of public opinion. He's quick to point out, however, that this premise does not apply in a totalitarian state. Dyer says the way to overcome the institutionalized bias is through education. I agree: Education, coupled with advocacy, is the answer. The challenge is to encourage others to become disciples, too.

PSYOP in Desert Shield/ Desert Storm

Col Frank L. Goldstein, USAF
Col Daniel W. Jacobowitz, USAF, Retired

Understanding the role of psychological operations in the Gulf War requires more than a glimpse of its contributions to military conflicts. To understand PSYOP, we must place it within the context of the times; specifically, in the sequence of events that led to Operations *Desert Shield* and *Desert Storm*.

When Saddam Hussein began to build his military strength along the Kuwaiti border, the United Nations (UN) began to react. Through a series of 13 resolutions, the UN demanded that Iraq end its aggression and pull out of Kuwait. Embargoes were established and ultimatums were delivered. Member states, including the US, Egypt, United Kingdom, France, Italy, Saudi Arabia, and Kuwait, deployed forces and/or equipment. Virtually the entire Western world-and a majority of Arab nations-opposed Iraq. Americans at home overwhelmingly came to the support of the president's actions (in contrast to the domestic situation during the Vietnam conflict).' The US government clearly articulated its policies and goals, having developed them through full, rapid, public debate, involving the executive branch, the Congress, and even the judiciary, which rejected various legal challenges to the evolving policies.

A new force, the international electronic news media, became a critical element in the successful execution of the war. In particular, coverage by the Cable News Network (CNN) demonstrated the power of international broadcasting and involved itself as a medium both to aid and to deter Iraqi PSYOP plans. In true democratic media tradition, the accumulation of factual reporting allowed knowledgeable audiences to correctly characterize Saddam's plans and behavior.

The Iraqi propaganda system is pyramidal, with the top spot occupied by Saddam Hussein. Control is maintained at the

top, with many outlets, both overt and covert, at the bottom. Iraqi propaganda flows from the Ministry of Culture and Information (MCI) under the strict supervision of the Baath Party, the Revolutionary Command Council (RCC), and Saddam Hussein. Iraq's propaganda system was closely modeled after the Soviet system and is similar to that of most other totalitarian states.

An overriding aspect of Iraqi propaganda is the use of religious words and phrases. The techniques of Iraqi propaganda during the course of the crisis reflected the same style used by the Iraqis before the Gulf War. This campaign emphasized religious symbolism, Arab nationalism, and praise of Saddam Hussein. These themes reflected Iraqi culture and politics, demonstrating the fallacy of planning PSYOP based on the characteristics of the sender (rather than the nature of the receiver).

The Iraqis selected the following four objectives for their initial PSYOP campaign:

1. Rationalize their invasion of Kuwait.
2. Gain support of Arab masses.
3. Discourage nations from participating in the UN embargo.
4. Discourage or hinder military attacks on Iraq.

Four themes were generated from these objectives:

- a. The revolutionary forces in Kuwait had asked for Iraqi help.
- b. Iraq is the champion of oppressed Arabs.
- c. The West is depriving the Iraqi people of food and medicine.
- d. Iraq will withdraw from Kuwait after a short time. ²

Later, a fifth objective-rationalizing the incorporation of Kuwait as a permanent province of Iraq-was established.

The MCI distributed the themes to the various media outlets for dissemination. This system worked very well, enabling the MCI/Baath Party to coordinate the campaigns, to react to impact indicators of current campaigns, and to initiate new campaigns on short notice. Some of the campaigns were selectively distributed to increase the stress impact on the target. Other

campaigns used all media to ensure the widest possible distribution in the shortest amount of time.

Few limitations were placed on the type or content of Iraqi propaganda. At no time did missing or contrary facts interfere with Iraqi operations. If needed, documentation was simply manufactured. In the Iraqi PSYOP system, few restrictions are placed on efforts used to further an Iraqi goal. Furthermore, their campaigns did not have to follow any consistency, logic, or form; it was acceptable to criticize the Multinational Force's (MNF) bombing as being inaccurate on one day and, on the next day, to rest a theme on the destruction wrought by highly accurate MNF bombing. As far as Iraqi media were concerned, MNF bombing accuracy varied with the need to enhance the Iraqi propaganda campaign.

Saddam's use of PSYOP had varying results. Saddam used Scud attacks on Israel and Saudi Arabia as a political weapon to divert coalition attention and military effort from the main battlefield. The ever-present threat of chemical warheads was a major factor in his plan. According to Lt Gen Tom Kelly, operations chief for the Joint Chiefs of Staff, the Scuds were "of little military significance." Nevertheless, they produced emotional and psychological effects. Although Saddam induced fear among the Israelis and Saudis, and consternation among the coalition in general, his plan ultimately grounded on the rocks of military reality. However, Saddam's combination of useless military technology and a politically diverse targeting policy did serve to divert valuable coalition resources from other targets to the difficult task of Scud hunting.

Saddam's tactical purpose was achieved, but his strategic purpose was thwarted by dual coalition responses. Coalition tactical air efforts against the Scuds helped the Israelis maintain their policy of restraint, while the technological breakthrough of Patriot missiles calmed both Israeli and Saudi publics and further demonstrated coalition invincibility. Tactical military response, based on military competence and technological superiority, blunted a political weapon aimed at the heart of the coalition.

Iraqi efforts to use Western television as a relay for propaganda programs failed to convince important world audiences, although they may have been somewhat effective within the

Arab world. Among those efforts were Saddam's personal appearances with hostages, whom he attempted to characterize as "guests" of the Republic of Iraq. But Saddam's campaign was doomed by the perfectly natural and spontaneous negative reaction of a little British boy whom Saddam tried to convince of his good will. In this case the attempt to manipulate Western media completely backfired, as repetition of this scene throughout the Western world established public opinion of the true nature of the hostage situation. Further, it exposed Saddam's manipulative efforts and seriously eroded whatever credibility he retained.

Later Iraqi broadcasts were to fall flat as a result of Saddam's loss of credibility. For example, scenes of bomb damage at the otherwise unidentified building presented by the Iraqis as the Baby Milk Factory (with signs and workers' jacket logos conveniently in English) were quickly dismissed as crude propaganda by all except the most gullible or anti-Western. The nonsequitur of the signs and the behavior of the Iraqi media escort personnel (who limited reporter access within the site) conflicted with Iraqi claims. And when Western intelligence analysts demonstrated that the claimed bombing damage to cultural facilities in Iraq (the bombing of which is forbidden by the accepted laws of war) had in fact been faked by Iraqi wrecking crews, the remaining shreds of Iraqi television propaganda credibility were destroyed.³

Controversy still rages, particularly within the TV news industry, on the wisdom of continuing censored and pressured TV broadcasts from within the enemy capital. The TV broadcasts had both positive and negative tactical effects. Coalition operators were able to conclude from viewing scenes from Baghdad, or from the disappearance of live TV from Baghdad, that certain targets had been effectively struck.

In addition, the televised appearance of downed coalition pilots proved counterproductive for Iraq's objectives. Instead of convincing the coalition partners to acquiesce, a worldwide audience was appalled by the battered physical condition of the captives-and their orchestrated, mechanical admissions of guilt were painfully transparent. A backlash effect inspired greater support for the coalition.

A closer look at this one aborted Iraqi campaign will help clarify the propaganda process. The Iraqi goal of this propaganda campaign was to break the coalition. The Iraqi leadership concluded that if US public opinion could be marshaled against the war in the same way it was during the Vietnam conflict, the US would withdraw. Toward that end, the propagandists attempted to mimic some of the successful tactics used by the government of North Vietnam. One of the tactics employed was on-camera interviews of captured coalition pilots. The Iraqis thought that presenting these interviews would stimulate the US public to call for the withdrawal of US forces and the pursuit of peaceful options. Instead, outrage at Iraq's obvious violation of the Geneva convention resulted in even greater backlash against Saddam.

The highest echelons of the MCI/Baath Party made the decision to use captured allied pilots for propaganda purposes. The Iraqi News Agency, one of the principal media outlets to the West, managed the entire campaign. The plan to exploit allied pilots for propaganda included this strategy:

- capture several pilots,
- parade them through the streets,
- put them on television with prepared questions and answers,
- view the impact of the broadcasts through the Western media, and
- disseminate broadcasts to media and determine their impact.⁴

The initial problem that Iraq faced was how to disseminate their product; the coalition had damaged most of Iraq's television broadcasting capability early in the conflict. The Iraqis were forced to use a surviving low-power television transmitter, which they used to televise the parade of coalition pilots through the streets of Baghdad. But Iran was the only country that could receive their transmissions, and the Iranians did not share them with the world in a manner that suited the Iraqi purpose.

To circumvent this problem, the Iraqis videotaped interviews of the pilots and delivered them to various Western news

agencies. The interviews of the pilots were choreographed with specific questions and answers.

Interviewer: What's your opinion of this aggression against Iraq?

Pilot: I think this war is crazy and should never have happened. I condemn this aggression against peaceful Iraq.

Interviewer: What do you think about this aggression against Iraq?

Pilot: I think our leaders and our people have wrongly attacked the peaceful people of Iraq. 5

In the interviews the pilots told their families that they were being treated well. The MCI/Baath previewed and approved the interviews before releasing them to the media.

The response to the broadcast came very swiftly. All Western government, public, and media severely condemned the broadcasts and use of the downed pilots in this manner. The worldwide condemnation was so overwhelming that the broadcasts, which had begun on 20 January, ended on 24 January. On 25 January, the MCI announced that the interviews of captured pilots would stop.

Another of Saddam's PSYOP efforts were the radio broadcasts to US troops in the field by "Baghdad Betty," reminiscent of those by Tokyo Rose during World War II. Intended to lower US troop morale, Betty's messages veered into the farcical as she warned American servicemen that their wives back home were sleeping with famous movie stars like Tom Cruise, Arnold Schwarzenegger, and Bart Simpson.

PSYOP, as used by Iraq, was intended to produce the greatest amount of negative stress within the coalition forces, the civilian population of those governments, and upon the civilian and political leadership of surrounding Arab states. As previously stated, the PSYOP efforts against the military forces of the coalition had minimal effects. However, the PSYOP effort aimed by Iraq at certain segments of the coalition countries and surrounding Arab nations was notable.

Saddam's propaganda effort as a stress-inducing instrument appears to have been as intense as the effort put forth by North Vietnam during the latter part of the Vietnam War. The

Iraqi PSYOP effort was clearly intended to pressure those nations supporting the coalition and those UN resolutions imposed on Iraq. Another Iraqi effort was to gather support for economic sanctions as an alternative to military action. Later, efforts were made against economic sanctions. Iraq portrayed the US, and specifically President George H. Bush, as the main opponent to Saddam. Some of the key themes used in these campaigns:

- **The war was really about access to oil.**
- **The US was using the war as an excuse for imperialism.**
- **The US was propping up a corrupt government in Kuwait.**

These attacks, targeted at the populations of Great Britain, Germany, France, Australia, Canada, the United States, and the Arab nations of the coalition, had varying degrees of success.

The Iraqi campaign against imperialism was a carbon copy of earlier Vietnam-era themes. Saddam spoke of the Gulf crisis as another Vietnam and painted a portrait of the US and coalition partners as embarking on another mistake. A great deal of effort was put into the following propaganda themes:

- **The US was embarking on another dirty war.**
- **The war would be very bloody and would last a long time.**
- **The US would again be divided over the war.**
- **Again, the poor and the minorities are fighting a war for the rich and powerful.**

Saddam Hussein's speeches were filled with images of certain doom, Vietnam-style-body bags returning home by the thousands, an enemy who could wait out the bombing to fight a bloody ground war, and an environment that would be as inhospitable as the jungle. He expected average citizens to recoil from the horror of such a war and spread more propaganda to dissuade the voters from supporting the coalition effort. A wedge between the Western nations would, in his mind, eventually result. The strategy is reflected in media writing around the world.

Iraq is no Panama and Saddam Hussein no General Noriega... The United States might be mired in the sands of the Arabian deserts just as they were bogged down in the paddy fields of Vietnam. (New Straits Times, 13 August 1990.)

It was clear from the beginning that the Persian Gulf conflict would not only be resolved in the hot dunes of the desert, but also in the

quicksand of US public opinion.... While the public's reaction against the US involvement in Vietnam took years to materialize, it has developed very quickly [for the Middle East] . . . This is a fortunate development. (*La Jornada*, 22 October 1990.)

[Saddam] seeks to break Western solidarity and above all to put the Bush Administration in a corner. Time is in favor of Iraq now that US public opinion is gaining a clearer dimension of the high cost in human life of military action in faraway lands. (*La Nacion*, 22 August 1990.)

The military force building up against Saddam Hussein is such that a spark may be struck at any moment. The United States will be in danger of sinking into the sand, as it once did in the rice paddies of Vietnam. (*La Suisse*, 23 August 1990.)

There's the strongly-held belief that the [Vietnam] experience has rendered America incapable of marshalling public support to launch another war. (*Irish Independent*, 20 September 1990.)

While the Iraq propaganda effort certainly caused some confusion, and increased the stress of susceptible segments of the audience, neither public opinion nor the world media were moved as the Iraqi president had hoped. The public within the US and other coalition countries was determined to show support for their soldiers stationed in the Gulf. Neither slogans nor disrespect of military forces gained popularity during the war.

The failure of most Iraqi propaganda was in its credibility. While Saddam himself believed much of his propaganda, it appears that most of the world did not. His biggest successes were in the Arab world; and even in those countries, success was neither significant nor complete on any issue. The propaganda, in general, was far below the level of sophistication of effective audiences. Politically aware segments of the population, who would be inclined to be antiwar in general, were, if anything, turned off by the crude Iraqi attempts to manipulate their sincere beliefs. The clear articulation of goals, international support through the coalition and the UN, and the effective, low-casualty military action, rendered Iraqi propaganda ineffective.

Coalition Psychological Operations

In contrast to Saddam's efforts, coalition PSYOP efforts significantly affected Iraqi soldiers. First, the coalition efforts

were of a more tactical nature (i.e., focused on *convincing* Iraqi troops to surrender). Second, the combining of PSYOP with the air and ground campaigns was intended to affect both soldiers and senior military leadership.

Tactical PSYOP in the Persian Gulf proved effective and efficient in terms of four principal sets of operations: ⁷

- radio *transmissions*,
- loudspeaker broadcasts,
- leaflet *disseminations*, and
- enemy prisoners of war (EPW) team actions.

Operational success resulted from effective innovation in the field and from well-executed, time-sensitive planning. To a lesser extent, tactical operations proceeded from the deliberate planning model. Using the four identifiable sets of operations, PSYOP was implemented by various agents and organizations, ranging from theater-level cells to small, three-person teams serving in direct support of the forward combat units.⁸

The four operations showed different levels of effectiveness as to their impact on the Iraqi target audience. Table 1 lists the efforts and the relative effectiveness resulting from the four operations collectively.

Table 1

Exhibit I PSYOP Effort and Relative Effectiveness
in the Persian Gulf

Effort
29 Million Leaflets Dropped In-theater
17 Hours Per Day of Radio Transmitting
19.5 Hours Per Day Aerial Broadcasting
Relative Effectiveness
73 Thousand Iraqis Reached through PSYOP
70% EPWs Report Messages Had Impact on Surrenders

Source: United States Special Operations Command (USSOCOM), "Post Operational Analysis: Iraqi Psychological Operations During Operations DESERT SHIELD/STORM," SOJ9, 1992.

The four operations focused on the intended Iraqi audience in concert with effective air and ground campaigns. However, because PSYOP had been slighted in the theater operational plan, this combination was not used at first. The result of this combined PSYOP, air, and ground effort was the influencing of an unexpectedly large number of Iraqi prisoners to surrender.

The four sets of operations-radio transmission, loudspeaker broadcasts, leaflet drops, and the actions taken by EPW teams-were conducted in January and February 1991.⁹ The coalition initiated its tactical leaflet and radio activities in January 1991 to coincide with the start of the air campaign and terminated them in March and May, respectively. The loudspeaker and EPW actions began in February with the start of the groufid campaign and ended in March and April.

An important precept at work in the radio and leaflet operations was reinforcement. Tactical PSYOP personnel announced to Iraqi ground units that a bombing was to occur at a specified time and place.¹⁰ The next day, they announced that a bombing had indeed occurred as warned (only if the event had occurred as planned). The repeated cycles of announcement and execution helped persuade the Iraqis that the message and delivery means were credible and that surrender was a viable alternative to useless death.¹¹

Radio Transmissions

Six broadcast platforms were established and used in the Persian Gulf theater of operations. Three were Volant Solo using EC-130 aircraft platforms (retransmissions made via modified USAF C-130 aircraft) and three were ground radio stations: "Voice of the Gulf," "Voice of America" (DOD-loaned equipment), and "Free Kuwaiti People." According to now declassified message sources, the radio stations were managed and run almost exclusively by US Central Command (USCENTCOM) as part of its theater operational plan. Thus, these stations were integrated into the overall combat-PSYOP effort relatively early. Programs consisted of pretaped messages broadcast continuously each day for about 17 hours. Messages conveyed such themes as the inevitability of defeat, Saddam's inappropriate leadership, and surrender

appeals. A typical message transmitted over an established "surrender hotline": "YOUR DIVISION WILL BE BOMBED TOMORROW. ABANDON YOUR EQUIPMENT, LEAVE YOUR LOCATION NOW, AND SAVE YOURSELVES."

The relative effectiveness of these radio transmissions, in terms of audience exposure, was approximately 58 percent (versus zero for no transmissions). The degree of persuasiveness relative to no transmissions was estimated to be 46 percent. Impact on surrender reached about 34 percent.¹²

Such moderate values, according to some thinking, may be reflective of a culture whose primary representational systems (or language channels) seemed not to be auditory, but visual (as with leaflet drops) and kinesthetic (as with the humane actions of EPW teams).¹³

Loudspeaker Broadcasts

Typical PSYOP was accomplished in the theater of operations by two- or three-person loudspeaker teams in direct support of forward combat brigades. Teams consisted typically of one or two noncommissioned officers and an interpreter or communications specialist.

Loudspeaker teams broadcast messages that had been prepared and dubbed onto audiotapes and distributed to them and other teams by the 4th PSYOP Group by way of its product dissemination battalion. Occasionally, a team would ad-lib a broadcast if pressures of the moment demanded variation from the prepared script and if the language skill and initiative of the team so permitted.

Loudspeaker broadcasts generally produced moderate effectiveness in terms of audience exposure, persuasiveness, and impact on surrender. The rather uneven successes of the loudspeaker operations were found to be similar to those of radio transmissions, although some results, arguably positive, were obtained through the convincing appeals of enterprising loudspeaker teams. At least one team induced a captured Iraqi sergeant to make heartfelt appeals to his comrades across a berm using the very loudspeaker system that induced him to surrender.¹⁴ **Feedback from some EPWs indicated that, while**

"leaflets and radio showed us how to surrender, loudspeaker teams told us [exactly] where [to do it]. ^ 15

The following account by SSgt Edward Fivel, 9th Battalion, 4th Psychological Operations Group (POG), illustrates the operation of his loudspeaker team and its unusual effectiveness.

We had to convince the company commander of our parent unit to let us PSYOP people try ousting those Iraqi soldiers from their underground bunker. We kept telling him there was nothing to lose by trying, especially since the pounding all morning by the 101st [Airborne Division] hadn't done anything.

So the three of us gave it a try. We arranged for the Blackhawk [helicopter] to ride us to the site of the bunker and we began dropping surrender leaflets. Then we returned to base and found that nothing had happened—no surrenders, no movement, nothing.

We tried something else. We hopped back on the Blackhawk and returned to the bunker area, this time intending to use our loudspeaker system and a pretaped message given by headquarters. We picked a spot on the ground about 800 meters from the bunker and started broadcasting. Nothing happened. I guess we couldn't be heard over the loud racket of our helicopter.

We asked the pilot to land us on the ground not too far from the bunker. With what you might call serious reservations, he eventually landed us, feeling a little protected, I guess, by the three Apaches and one Blackhawk whopping above our heads and to our right. He took off immediately, saying he'd stay in contact by radio.

The three of us were now on the ground. We were facing this enemy bunker that Intelligence says has 20 enemy soldiers who might be waiting to greet us. We picked up our loudspeaker equipment—the transmitter and the speaker—and ran about 200 meters closer to the bunker. We sat the equipment down and again started playing the cassette surrender tapes. Still no movement.

Then our team leader decided to lift up the speaker. He lifted it and began carrying it even closer to the bunker. He toted that speaker exactly 50 more meters. I knew the distance because that's the length of the electrical cord he stretched out to the end, 50 meters. The team leader was very close to the enemy now.

Then he suddenly stood straight up and pushed the speaker high over his head [like some kind of statue showing a big trophy to a crowd far away]. I told the other guy back with me watching all this, our communications man, to quit playing the taped message and go live, and to keep doing it. The guy had just gotten out of language school, so he could handle the Iraq language pretty well. He talked loudly through the speaker in four message sets.

That worked. A crackling voice came through our radio from the helicopter pilot who was still hanging up there with us. The pilot had spotted some movement. Then we saw Iraq soldiers begin climbing out of the bunker in front of our team leader. They were waving little white flags and carrying no weapons.

That was about it for us in that scene because our pilot said over the radio that he was landing to pick us up so he could refuel back at 101 division base. He was running real low on fuel. We didn't see how many Iraqis came out of that bunker, although we had counted up to about 20 of them before we took off.

When we got back to base, the three of us and our pilot began receiving weird congratulations. We weren't sure why. Seems that over 400 Iraqis eventually came out of the bunker, all without a fight.

For the next couple of days every helicopter the 101 had was flying back and forth carrying Iraqi soldiers from the bunker to a forward EPW camp. The camp must have been getting pretty crowded. The big thing we realized later was that these actions had kicked off the "Hail Mary" play in the ground war because they fixed the Iraqi units on line in front of us, letting our endrunners in the other division make their wide sweep around the main Iraqi force.

Leaflet Drops

Leaflets and other forms of print PSYOP proved especially effective. Of the targeted audience-300,000-plus Iraqi troops-approximately 98 percent of them read or were otherwise exposed to the 29 million leaflets dropped in the theater.¹⁶ Many EPWs were found clutching leaflets in their hands or hiding them somewhere on their uniforms as they raised their arms to surrender.¹⁷ An estimated 88 percent of the Iraqi forces were influenced by the leaflet drops as intended, and 77 percent were persuaded to quit the fight through the combination of combat-leaflet operations and credible tactical military threats and actions.¹⁸

Leaflets appeared to be effective in the Persian Gulf crisis. Their language was simple and straightforward. Appeals were visual for an audience that seemed to respond psychologically and emotionally to visual means. Whether the leaflets' effectiveness stemmed from psychological reasons or simply from the sheer volume of leaflets that descended on the Iraqis daily is open to interpretation. Weather conditions and low leaflet loss, combined with a generally effective theme, audience

vulnerabilities, and effective coalition military action, resulted in an unprecedented success in inducing surrenders. The leaflets enabled many Iraqi soldiers, who were not highly motivated to support Saddam's war of conquest, to avoid sacrificing their lives in a doomed cause.

Still, some curious effects were attributed to at least some of the leaflet designs. These were effects that startled even the Arab partners who had supposedly provided input to the format.¹⁹ PSYOP personnel later learned that the leaflets' effectiveness would likely have been enhanced had design consideration been given to the nonverbal, cultural cues that were read by the Iraqis as subtext.²⁰

If this concept (subtext in language) escaped or seemed vague to designers and others at first, the application certainly became clear with each EPW whom they later interviewed during *Desert Storm* and similar situations.²¹ Theater PSYOP personnel came to realize that they had missed an important dimension of cultural communication when designing the leaflets. In some cases, the PSYOP personnel were able to make adjustments and manage reprints; in others, they learned the cultural lessons after the cessation of hostilities.

An important illustration of this concept was the subtextual message transmitted by the color red. When red ink was included in leaflets, presumably for function or appeal, Iraqi soldiers typically hesitated or avoided approaching a leaflet sticking out from the sand nearby. They simply feared and disdained red as a signal for danger.²²

Whenever Iraqis read a leaflet that showed a coalition soldier without a chin beard gesturing affably to an Iraqi, the reader became distrustful. To an Iraqi a chin beard signals a certain Muslim holiness and trust he could not find on a clean-shaven chin.²³

When the Iraqis scrutinized a leaflet that showed Iraqi EPWs enjoying a bowl of fruit given by their captor, they were disappointed at seeing no bananas in the bowl. Bananas are a favored delicacy in Iraqi culture.

When an Iraqi soldier saw words encircled in the familiar thought bubble of Western comic strips, he became thoroughly confused. Unlike the English-speaking world and some other cultures, Iraqi culture does not link bubbles, words, and

pictures.²⁴ However, this technique had been so internalized by the leaflet designers, that they were unaware that some cultures use other clues to indicate which cartoon character is speaking.

Overall, *PSYOP in Desert Storm* was among the most successful media-based PSYOP campaigns ever undertaken. Planners incorporated PSYOP into air operations from the outset and relied on leaflets to multiply the stress induced by unopposed bombing raids. *Desert Storm* coalition PSYOP proved the value of this combat adjunct at the tactical level and reaffirmed the overriding importance of credibility. Iraqi disdain for truthfulness contrasted vividly with Western punctiliousness in behavior and leaflet preparation. Coalition determination to stick to truthful overt PSYOP, relying on credible military performance to override minor cultural missteps in message preparation, proved successful in inducing thousands of early surrenders. The bottom line of coalition policy was met-casualties were reduced on both sides.

6. Such use of prisoners is forbidden by the laws of warfare. The failure of the Iraqi plan was partially engineered by such clever Yankee air pirates as Lt Jeffrey Zaun, who adapted the methods used by US airmen and sailors in the Vietnam War. Zaun augmented the battering of his face and exaggerated his inappropriate behavior to inform the world the Iraqis were maltreating him. What is more amazing is that the Iraqis would peddle these devastating tapes. The coalition pilot's actions were so effective that future conflicts may finally see the end of such illegal exploitation of prisoners.

Epilogue

Lt Gen Samuel V. Wilson, USA, Retired

If past events are indeed prologue to the future, then understanding the early nature and scope of psychological operations, synthesizing the PSYOP lessons learned from historical national *policy* planning and from strategic, tactical, and operational PSYOP applications, can foreshadow even greater progress and success in accomplishing our national interests and objectives in political and military environments. *Psychological Operations: Principles and Case Studies* is the catalytic framework toward that end, since it reflects the foundation of PSYOP knowledge and wisdom.

It is critical that those involved with PSYOP—whether they are military commanders, political leaders, new PSYOP technicians, or experienced PSYOP practitioners and staff officers—become familiar with this book to better understand the importance that military PSYOP plays as a cost-effective, force-multiplier instrument of US military and political power. Such understanding is especially necessary today, given our military budgetary constraints, the existing nuclear, biological, and chemical threats, and our dynamic, complex, and worldwide arena of operations. Sun Tzu's strategy in 500 B.C. of subduing the enemy without engaging him is not only apropos but quite probably necessary for our very propagation.

The reader can learn much from parts II and III, which present various articles on national policy, PSYOP planning, and strategic and tactical PSYOP. Part III is especially significant since today much of the third world still uses Soviet PSYOP doctrine. In fact, those who would argue that the communist ideological threat has diminished with the demise of the Soviet Union, and that the US PSYOP focus should be abated, need to take heed of the various strategic and global resurgencies and the Vietnam legacy presented in part IV. One of the most important reasons for the communist "ideo-military"

victory in Vietnam, for example, was that American strategic PSYOP had no political or moral acceptance as a necessary foundation of our national policy. We should not minimize the urgent need to increase American sensitivity to the psychological dimension of warfare, and these articles and case studies support that theme. The articles on our recent actions in Panama and in *Desert Storm* not only solidify the PSYOP requirement but also point out our weaknesses and future challenges.

These authors lead us to believe correctly that the PSYOP weapon system, if employed properly, must precede, accompany, and follow all military force employments while being closely coordinated with all agencies of government and while being systematically integrated with US national security policy and objectives throughout the spectrum of conflict and in peacetime. PSYOP is indeed a phenomenon in itself.

Contributors

Preston S. Abbott

George V. Allen, retired career foreign service officer, has served as ambassador to Iran, Yugoslavia, India, and Nepal, and as Greece's assistant secretary of state for Near East, South Asia, and African Affairs. Other positions he has held include director, US Information Agency; president, Tobacco Institute; and director, Foreign Service Institute.

MSgt Richard A. Blair, USAFR, a military intelligence analyst in the Reserve, is staff assistant to the senior military liaison and defense advisor, United States Information Agency, Washington, D.C. He was recalled to active duty during the Persian Gulf War to provide ongoing analysis of Iraqi psychological operations for Headquarters US Special Operations Command.

DeWitt S. Copp served as an Army Air Force Air Transport Command pilot in North Africa and the Middle East in World War II. Since the war, he has specialized as a book, film, and news writer in military aviation and foreign affairs. Copp has served on the staff of "Voice of America" as a writer-editor and with the United States Information Agency as policy officer on Soviet disinformation.

Col Benjamin F. Findley, Jr., USAFR, is a politico-military affairs officer with the Directorate of Psychological Operations and Civil Affairs, J-9, Headquarters US Special Operations Command. He holds a PhD degree in business. Colonel Findley has been a regular speaker at the USAF Special Operations School and a guest instructor at the Air University Center for Professional Development. He previously won the PSYOP Outstanding Instructor's Award and was the outstanding USAF Academy liaison officer for the Alabama-Northwest Florida

Region. Colonel Findley is a graduate of Air War College and is the author of several books.

Lloyd A. Free, president, Institute for International Social Research, School of Advanced International Studies, Johns Hopkins University. His former positions include editor, *Public Opinion Quarterly*; director, Foreign Broadcast Intelligence Service, during World War II; assistant military attache, Switzerland; acting director, Office of International Information, State Department; advisor to Presidents Eisenhower, Kennedy, and Johnson; and advisor/consultant to Vice President Nelson Rockefeller.

Col Frank L. Goldstein, USAF, is dean, Education and Research, Air Command and Staff College, Air University. Formerly he served as deputy chief, Policy and Concepts Division, Directorate of Psychological Operations and Civil Affairs, J-9, Headquarters US Special Operations Command and as chief, Psychological Operations Branch, at the USAF Special Operations School. Colonel Goldstein earned a PhD degree in educational psychology and is a graduate of the USAF, British, NATO, and German PSYOP courses. He is a well-known writer and speaker among military audiences.

Col Joseph S. Gordon, USAR, professor of European studies at the Defense Intelligence College. He has taught history at Campbell College and at Duke University, where he earned a PhD degree in European history. Colonel Gordon's interest in psychological operations derived from three years as an intelligence analyst with the 4th Psychological Operations Group, Fort Bragg, North Carolina. He is a graduate of Army War College.

Col Daniel W. Jacobowitz, USAF, Retired, is assigned to strategic missile operations and the political-military field at Air University. Following his Titan II missile assignment, he had consecutive tours in Military Civic Action in Thailand. Colonel Jacobowitz has previously been on the faculties at Squadron Officer School and Air Command and Staff College and was operations officer of the Psychological Operations

Division, Combined Forces Command, Korea. After a tour in the State Department, he served as director of Psychological Operations in the Office of the Secretary of Defense and as director of the Center for Treaty Implementation, US Southern Command, Panama. He joined the Gulf War Air Power Survey team in 1991.

William F. Johnston is a member of the staff and faculty, National Interdepartmental Seminar, in the Office of the Chief of Psychological Warfare at the Foreign Service Institute. He has had several special warfare-type assignments, including command of a psychological warfare (psywar) battalion in US Army, Pacific. Johnston is a former chief of the Joint United States Public Affairs Planning Office, Vietnam.

Lt Col Philip P. Katz, USA, Retired, is a senior research scientist, American Institute for Research. He has been a psychological operations (PSYOP) instructor and lecturer at the Army Special Warfare Center, a PSYOP officer at the Department of Army, senior PSYOP officer for US Army, Pacific, and senior program manager for Development of Strategic Psychological Operations in Support of Field Activities, Vietnam. Colonel Katz developed a computerized PSYOP management information system for the Joint Chiefs of Staff and the Department of the Army. He is the author of several studies on psychological operations.

Maj James V. Keifer, USAF, Retired, is a psychological operations staff officer in the Directorate of Psychological Operations and Civil Affairs, J-9, Headquarters US Special Operations Command. He earned his master's degree in public administration from the University of Oklahoma and is a graduate of PSYOP courses instructed by the US Air Force and Army, the British army, and the North Atlantic Treaty Organization. Major Keifer's career has included experience in space operations, audiovisual media production and management, and public affairs.

Dr Carnes Lord earned PhD degrees from both Yale and Cornell Universities. He has been a distinguished fellow at the

National Defense University, an assistant to the vice president for National Security Affairs, and a foreign affairs officer with the Arms Control and Disarmament Agency. He has had consultant and director positions at the National Security Council and at the National Institute for Public Policy. Dr Lord's assignments at universities and colleges have been as assistant professor in the Department of Government and Foreign Affairs at the University of Virginia, instructor in the Department of Government at Dartmouth College, and lecturer in the Departments of Classics and Political Science at Yale University.

Ronald D., McLaurin is a research scientist, American Institute for Research. His previous positions include assistant for Africa, Office of the Assistant Secretary of Defense (International Security Affairs) and management assistant, Office of the Secretary of Defense. McLaurin is the author and contributor to studies on the analysis of foreign policy, international politics, and social and international conflict.

James Melnich is an analyst, Soviet Internal Affairs, Defense Intelligence Agency. He holds an MA degree from Harvard University. Melnich formerly served as director, Russian Émigré Center in Chicago.

Michael A. Morris is a fellow at the Canadian Institute of International Affairs. He formerly served on the faculty at Gallaudet University.

Laurence J. Orzell served as European branch chief, 6th Psychological Operations Battalion, 1st Special Operations Command, Fort Bragg, North Carolina. He taught European and American history at Marywood College and the University of Scranton. Orzell's publications on Polish history and immigrants have appeared in *Polish Review*, *Mid America*, and *Polish American Studies*.

Lt Col John Ozaki, USA, is a career military officer assigned to the Department of Army. He has served with the Army Security Agency, Headquarters 7th Army, Military Assistance Command, Vietnam, and in the infantry in Korea. Colonel

Ozaki is a graduate of Army Command and General Staff College.

Col Alfred H. Paddock, Jr., USA, Retired, served three combat tours with Special Forces units in Southeast Asia and held positions on the faculties of Army Command and General Staff College and Army War College. Other assignments include the Department of the Army Staff and the Secretary's Policy Planning Staff, Department of State. Colonel Paddock was commander of both the 6th Psychological Operations Battalion and the 4th Psychological Operations Group, and was director for Psychological Operations, Office of the Secretary of Defense. He earned his MA and PhD degrees from Duke University and is author of U.S. Army Special Warfare: Its Origins.

Gen Richard G. Stilwell (1917-91), USA, Retired, served in a number of key military and civilian positions throughout his professional life. He was commandant of cadets at the US Military Academy, commander of the 1st Armored Division and the 24th Army Corps, Vietnam, and chief of staff for General Westmoreland. As a civilian, the late General Stilwell served as under secretary of defense for policy and chairman of the DOD Security Review Commission.

Col Fred W. Walker (1942-90), USAF, Retired, was the first chief of the Psychological Operations Directorate, J-9, United States Special Operations Command. The late Colonel Walker was a pilot, parachutist, and past chief, PSYOP Division, Organization of the Joint Chiefs of Staff, Washington, D.C. An author and speaker on special operations throughout DOD, he was a graduate of the Armed Forces Staff College, Air War College, and the US Air Force Academy.

Col Dennis P. Walko, USA, master parachutist and licensed professional engineer, is chief of the Command Support and Coordination Division, Directorate of Psychological Operations and Civil Affairs, J-9, Headquarters US Special Operations Command. He has served in the Civil Affairs-PSYOP Exchange Office to the Colombian Army General Staff, as civic action

coordinator to the El Salvador Combined General Staff, and as commander of the 1st Psychological Operations Battalion. Colonel Walko is a graduate of Command and General Staff College and the Inter-American Defense College.

Lt Gen Samuel V. Wilson, USA, Retired, is president, Blackburn College, Carlinville, Illinois. Before his retirement in August 1977, he had served in combat during World War II with the Office of Strategic Services, in the 1944 North Burma Campaign with "Merrill's Marauders," with the US Defense Attaché/Moscow, in Vietnam as associate director for field operations at the US Agency for International Development and, later, as US mission coordinator and minister-counselor for the US Embassy in Saigon. General Wilson has been Special Forces Group commander; assistant commandant of the Army's Special Warfare School; deputy assistant to the Secretary of Defense for Special Operations; deputy to the director of Central Intelligence; director, Defense Intelligence Agency; adjunct professor of political science, Hampden-Sydney College; chairman, Military Board of Virginia; chairman of the Secretary of Defense's Special Operations Policy Advisory Group; staff consultant to House and Senate Armed Services Committees; advisor on foreign technology, Los Alamos National Laboratory; and senior consultant at the Betac Corporation, Arlington, Virginia.

Lev Yudovich, born and educated in the USSR, emigrated in 1977 to the West. He is an international author of numerous articles on Soviet political and military subjects. He was a platoon and company commander in the Red Army during World War II and a former practicing defense attorney in Moscow. Yudovich has served on the staff of the US Army Russian Institute as professor of military and political science. He has written more than 200 articles for "Radio Liberty/Radio Free Europe" on Soviet political, military, and economic policy.

WITH LOVE

Preface to the Second Edition

The present edition of this work has been modified to meet the needs of the readers of the mid-1950s. The material in the first edition following page 244 has been removed; it consisted of a chapter hopefully called "Psychological Warfare and Disarmament." A new Part Four, comprising three fresh chapters, has been added, representing some of the problems confronting students and operators in this field. Pages 1-243 are a reprint from the first edition.

This edition, like the first, is the product of field experience. The author has made nine trips abroad, five of them to the Far East, since 1949. He has profited by his meeting with such personalities as Sir Henry Gurney, the British High Commissioner for the Federation of Malaya, who was later murdered by the Communists, meetings with Philippine, Republic of Korea, Chinese Nationalist, captured Chinese Communist and other personalities, as well as by association with such veterans in the field as General MacArthur's chief psywar expert, Colonel J. Woodall Greene. To Colonel Joseph I. Greene, who died in 1953, the author is indebted as friend and colleague. He owes much to the old friends, listed in the original acknowledgment, who offered their advice and comment in many instances.

Many readers of the first edition wrote helpful letters of comment. Some of their suggestions have been incorporated here. The translators of the two Argentine editions of this book; the translator of the Japanese edition, the Hon. Suma Yokachiro; and the translator of the first and second Chinese editions, Mr. Ch'ên En-ch'êng—all of them

have made direct or indirect improvements in the content or style of the work.

The author also wishes to thank his former student, later his former ORO colleague, now his wife, Dr. Genevieve Linebarger, for her encouragement and her advice.

The author hopes that, as U. S. agencies and other governments move toward a more settled definition of doctrine in this field, a third edition—a few years from now—may be able to reflect the maturation of psywar in international affairs. He does not consider the time appropriate for a fundamental restatement of doctrine; he hopes that readers who have suggestions for future definitions of scope, policy, or operations can communicate these to him for inclusion in later printings of this book.

3 August 1954

ACKNOWLEDGMENTS

This book is the product of experience rather than research, of consultation rather than reading. It is based on my five years of work, both as civilian expert and as Army officer, in American psychological warfare facilities—at every level from the Joint and Combined Chiefs of Staff planning phase down to the preparing of spot leaflets for the American forces in China. Consequently, I have tried to avoid making this an original book, and have sought to incorporate those concepts and doctrines which found readiest acceptance among the men actually doing the job. The responsibility is therefore mine, but not the credit.

Psychological warfare involves exciting wit-sharpening work. It tends to attract quick-minded people—men full of ideas. I have talked about psychological warfare with all sorts of people, all the way from Mr. Mao Tse-tung in Yen-an and Ambassador Joseph Davies in Washington to an engineer corporal in New Zealand and the latrine-coolie, second class, at our Chungking headquarters. I have seen one New York lawyer get mentally befuddled and another New York lawyer provide the solution, and have seen Pulitzer Prize winners run out of ideas only to have the stenographers supply them. From all these people I have tried to learn, and have tried to make this book a patchwork of enthusiastic recollection. Fortunately, the material is non-copyright; unfortunately, I cannot attribute most of these comments or inventions to their original proponents. Perhaps this is just as well: some authors might object to being remembered.

A few indebtednesses stand out with such clarity as to make acknowledgment a duty. These I wish to list, with the caution that this list is not inclusive.

First of all, I am indebted to my father, Judge Paul M. W. Linebarger (1871-1939), who during his lifetime initiated me into almost every phase of international political warfare, whether covert or overt, in connection with his life-long activities on behalf of Sun Yat-sen and the Chinese Nationalists. On a limited budget (for years, out of his own pocket) he ran campaigns against imperialism and communism, and for Sino-American friendship and Chinese democracy, in four or five languages at a time. For five and a half years I was his secretary, and believe that this experience has kept me from making this a book of exclusively American doctrine. There is no better way to learn the propaganda job than to be whipped thoroughly by someone else's propaganda.

Second only to my debt to my father, my obligation to the War Department General Staff officers detailed to Psychological Warfare stands forth. By sheer good fortune, the United States had an unbroken succession of intelligent, conscientious, able men assigned to this vital post, and it was my own good luck to serve under each of them in turn between 1942 and 1947. They are, in order of assignment: Colonel Percy W. Black, Brigadier General Oscar N. Solbert, Colonel Charles Blakeney, Lieutenant Colonel Charles Alexander Holmes Thomson, Colonel John Stanley, Lieutenant Colonel Richard Hirsch, Lieutenant Colonel Bruce Buttles, Colonel Dana Johnston, Lieutenant Colonel Daniel Tatum, and Lieutenant Colonel Wesley Edwards. Their talents and backgrounds were diverse but their ability was uniformly high. I do not attribute this to the peculiar magic of Psychological Warfare, nor to unwonted prescience on the part of The Adjutant General, but to plain good luck.

Especial thanks are due to the following friends, who have read this manuscript in whole or in part. I have dealt independently with the comments and criticism, so that none of them can be blamed for the final form of the book. These are Dr. Edward K. Merat, the Columbia-trained MIS propaganda analyst; Mr. C. A. H. Thomson, State Department international information consultant and Brookings Institution staff member; Professor E. P. Lilly of Catholic University and concurrently Psychological Warfare historian to the Joint Chiefs of Staff; Lieutenant Colonel Innes Randolph; Lieutenant Colonel Heber Blankenhorn, the only American to have served as a Psychological Warfare officer in both World Wars; Dr. Alexander M. Leighton, M.D., the psychiatrist and anthropologist who as a Navy lieutenant commander headed the OWI-MIS Foreign Morale Analysis Division in wartime; Mr. Richard Hirsch; Colonel Donald Hall, without whose encouragement I would never have finished this book; Professor George S. Pettee, whose experience in strategic intelligence lent special weight to his comment; Colonel Dana Johnston; Mr. Martin Herz, who may some day give the world the full account of the mysterious Yakzif operations; and Mrs. M. S. Linebarger.

Further, I must thank several of my associates in the propaganda agencies whose thinking proved most stimulating to mine. Mr. Geoffrey Gorer was equally brilliant as colleague and as ally. Dean Edwin Guthrie brought insights to Psychological Warfare which were as much the reflection of a judicious, humane personality as of preeminent psychological scholarship. Professor W. A. Aiken, himself a historian, provided data on the early history of U. S. facilities in World War II. Mr. F. M. Fisher and Mr. Richard Watts, Jr., of the OWI China Outpost, together with their colleagues, taught me a great deal by letting me share some of their tasks and my immediate chief in China, Colonel Joseph K. Dickey, was kind to allow a member of his

small, overworked staff to give time to Psychological Warfare. Messrs. Herbert Little, John Creedy and C. A. Pearce have told me wonderful stories about their interesting end of propaganda. Mr. Joseph C. Grew, formerly Under Secretary of State and Ambassador to Japan, showed me that the processes of traditional responsible diplomacy include many skills which Psychological Warfare rediscovers crudely and in different form.

Finally, I wish to thank Colonel Joseph I. Greene in his triple role of editor, publisher and friend, to whom this volume owes its actual being.

While this material has been found unobjectionable on the score of security by the Department of the Army, it certainly does not represent Department of the Army policy, views, or opinion, nor is the Department responsible for matters of factual accuracy. I assume sole and complete responsibility for this book and would be glad to hear the comment or complaint of any reader. My address is indicated below.

PART ONE

DEFINITION AND HISTORY

CHAPTER 1

Historic Examples of Psychological Warfare

Psychological warfare is waged before, during, and after war; it is not waged against the opposing psychological warfare operators; it is not controlled by the laws, usages, and customs of war; and it cannot be defined in terms of terrain, order of battle, or named engagements. It is a continuous process. Success or failure is often known only months or years after the execution of the operation. Yet success, though incalculable, can be overwhelming; and failure, though undetectable, can be mortal.

Psychological warfare does not fit readily into familiar concepts of war. Military science owes much of its precision and definiteness to its dealing with a well defined subject, the application of organized lawful violence. The officer or soldier can usually undertake his task of applying mass violence without having to determine upon the enemy. The opening of war, recognition of neutrals, the listing of enemies, proclamation of peace—such problems are considered political, and outside the responsibility of the soldier. Even in the application of force short of war, the

soldier proceeds only when the character of the military operation is prescribed by higher (that is, political) authorities, and after the enemies are defined by lawful and authoritative command. In one field only, psychological warfare, is there endless uncertainty as to the very nature of the operation.

Psychological warfare, by the nature of its instruments and its mission, begins long before the declaration of war. Psychological warfare continues after overt hostilities have stopped. The enemy often avoids identifying himself in psychological warfare; much of the time, he is disguised as the voice of home, of God, of the church, of the friendly press. Offensively, the psychological warfare operator must fight antagonists who never answer back—the enemy audience. He cannot fight the one enemy who is in plain sight, the hostile psychological warfare operator, because the hostile operator is greedily receptive to attack. Neither success nor defeat are measurable factors. Psychological strategy is planned along the edge of nightmare.

The Understanding Of Psychological Warfare.

In a formal approach to this mysterious part of the clean-cut process of war, it might be desirable to start with Euclidian demonstrations, proceeding from definition to definition until the subject-matter had been delimited by logic. Alternatively it might be interesting to try a historical approach, describing the development of psychological warfare through the ages.

The best approach is perhaps afforded by a simplification of both a logical and historical approach. For concrete examples it is most worthwhile to look at instances of psychological warfare taken out of history down to World War II. Then the definitions and working relationships can be

traced and—with these in mind—a somewhat more detailed and critical appraisal of World Wars I and II organizations and operations can be undertaken. If a historian or philosopher picks up this book, he will find much with which to quarrel, but for the survey of so hard-to-define a subject, this may be a forgivable fault.

Figure 1: A Basic Form of Propaganda. This American leaflet, issued during the Philippine landings, was dropped on inhabited Philippine areas in order to obtain local civilian cooperation with the landing forces. It can be called the "civilian-action" type.

Psychological warfare and propaganda are each as old as mankind; but it has taken modern specialization to bring them into focus as separate subjects. The materials for their history lie scattered through thousands of books and it is therefore impossible to brief them. Any reader contemplating retirement from the army to a sedentary life is urged to take up this subject.¹ A history of propaganda would provide not only a new light on many otherwise odd or trivial historical events; it would throw genuine illumination on the process of history itself. There are however numerous instances which can be cited to show applications of psychological warfare.

The Use Of Panic By Gideon.

One of the earliest (by traditional reckoning, 1245 B.C.) applications was Gideon's use of the lamps and pitchers in the great battle against the Midianites.

The story is told in the seventh chapter of the Book of Judges. Gideon was in a tactically poor position. The Midianites outnumbered him and were on the verge of smiting him very thoroughly. Ordinary combat methods could not solve the situation, so Gideon—acting upon more exalted inspiration than is usually vouchsafed modern commanders—took the technology and military formality of his time into account.

Retaining three hundred selected men, he sought for some device which would cause real confusion in the enemy host. He knew well that the tactics of his time called for every century of men to have one light-carrier and one torch-bearer for the group. By equipping three hundred men with a torch and a trumpet each, he could create the effect of thirty thousand. Since the lights could not be turned on and off with switches, like ours, the pitchers concealed them, thus achieving the effect of suddenness.

Figure 2: Nazi Troop Morale Leaflet. In this leaflet, used on the Italian front in 1944, the Nazis did not call for any specific action from their American GI readers. Their aim was merely depression of American morale for future exploitation by action propaganda. Note the extreme simplicity of the message. Throughout World War II, the Nazis were misled by their own tendentious political intelligence reports and consequently overestimated the kind and degree of American opposition to Franklin D. Roosevelt. They mistook normal complaint for treasonable sedition; hence, leaflets such as this seemed practical to the Germans.

Figure 3: One of the Outstanding Leaflets of the War. Prepared in 1945 for distribution by B-29s operating over Japan, this leaflet lists eleven Japanese cities which were marked for destruction. The leaflet is apparently of the civilian-action type, calling on Japanese civilians to save their own lives. At the same time, it had the effect of shutting down eleven strategically important cities, thus hurting the Japanese war effort while giving the

Americans a reputation for humanity and also refuting enemy charges that we undertook indiscriminate bombing.

Figure 4: The Pass Which Brought them in. Germans liked things done in an official and formal manner, even in the midst of chaos, catastrophe and defeat. The Allies obliged, and gave the Germans various forms of very official-looking "surrender passes," of which this is one. The original is printed in red and has banknote-type engraving which makes it resemble a soap-premium coupon. (Western Front, 1944-45, issued by SHAEF.)

He had his three hundred men equipped with lamps and pitchers. The lamps were concealed in the pitchers, each man carrying one, along with a trumpet. He lined his forces in appropriate disposition around the enemy camp at night and had them—himself setting the example—break the pitchers all at the same time, while blowing like mad on the trumpets.

The Midianites were startled out of their sleep and their wits. They fought one another throughout their own camp. The Hebrew chronicler modestly gives credit for this to the Lord. Then the Midianites gave up altogether and fled. And the men of Israel pursued after the Midianites.² That settled the Midianite problem for a while; later Gideon finished Midian altogether.

This type of psychological warfare device—the use of unfamiliar instruments to excite panic—is common in the history of all ancient countries. In China, the Emperor-usurper Wang Mang on one occasion tried to destroy the Hunnish tribes with an army that included heavy detachments of military sorcerers, even though the Han Military Emperor had found orthodox methods the most reliable; Wang Mang got whipped at this. But he was an incurable innovator and in 23 A.D., while trying to put down some highly successful rebels, he collected all the animals out of the Imperial menagerie and sent them along to scare the enemy: tigers, rhinoceri, and elephants were included. The rebels hit first, killing the Imperial General Wang Sun, and in the excitement the animals got loose in the Imperial army where they panicked the men. A hurricane which happened to be raging at the same time enhanced the excitement. Not only were the Imperial troops defeated, but the military propaganda of the rebels was so jubilant in tone and so successful in effect that the standard propaganda theme, "Depress and unnerve the enemy commander," was fulfilled almost to excess on Wang Mang. Here is what happened to him after he noted the progress of the enemy: "A profound melancholy fell upon the Emperor. It undermined his health. He drank to excess, ate nothing but oysters, and let everything happen by chance. Unable to stretch out, he slept sitting up on a bench."³ Wang Mang was killed in the same year, and China remained without another economic new deal until the time of Wang An-shih (A.D. 1021-1086), a thousand years later. Better psychological warfare would have changed history.

Field Propaganda Of The Athenians And The Han.

A more successful application of psychological warfare is recorded in the writings of Herodotus, the Greek historian:

Themistocles, having selected the best sailing ships of the Athenians, went to the place where there was water fit for drinking, and engraved upon the stones inscriptions, which the Ionians, upon arriving the next day at Artemisium, read. The inscriptions were to this effect, 'Men of Ionia, you do wrong in fighting against your fathers and helping to enslave Greece. Rather, therefore, come over to us or if you cannot do that, withdraw your forces from the contest and entreat the Carians to do the same. But if neither of these things is possible, and you are bound by too strong a necessity, yet in action, when we are engaged, behave ill on purpose, remembering that you are descended from us and that the enmity of the barbarians against us originally sprang from you.'⁴

This text is very much like leaflets dropped during World War II on reluctant enemies, such as the Italians, the Chinese puppet troops, and others. (Compare this Greek text with [Figure 5](#).) Note that the propagandist tries to see things from the viewpoint of his audience. His air of reasonable concern for their welfare creates a bond of sympathy. And by suggesting that the Ionians should behave badly in combat, he lays the beginning of another line—the propaganda to the Persians, "black" propaganda making the Persians think that any Ionian who was less than perfect was a secret Athenian sympathizer. The appeal is sound by all modern standards of the combat-leaflet.

Another type of early military propaganda was the political denunciation which, issued at the beginning of war, could be cited from then on as legal and ethical justification for one side or the other. In the Chinese *San Kuo* novel, which has probably been read by more human beings than any other work of fiction, there is preserved the alleged text of the proclamation of a group of loyalist pro-Han rebels on the eve of military operations (about A.D. 200). The text is interesting because it combines the following techniques, all of them sound: 1) naming the specific enemy; 2) appeal to the "better people"; 3) sympathy for the common people; 4) claim of support for the legitimate government; 5) affirmation of one's own strength and high morale; 6)

invocation of unity; 7) appeal to religion. The issuance of the proclamation was connected with rather elaborate formal ceremony:

The House of Han has fallen upon evil days, the bonds of Imperial authority are loosened. The rebel minister, Tung Cho, takes advantage of the discord to work evil, and calamity falls upon honorable families. Cruelty overwhelms simple folk. We, Shao and his confederates, fearing for the safety of the imperial prerogatives, have assembled military forces to rescue the State. We now pledge ourselves to exert our whole strength, and to act in concord to the utmost limit of our powers. There must be no disconcerted or selfish action. Should any depart from this pledge may he lose his life and leave no posterity. Almighty Heaven and Universal Mother Earth and the enlightened spirits of our forefathers, be ye our witnesses.⁵

Any history of any country will yield further examples of this kind of material. Whenever it was consciously used as an adjunct to military operations, it may appropriately be termed military propaganda.

Figure 5: Revolutionary Propaganda. When revolution favors one side or the other in war, revolutionary propaganda becomes an instrument which is used by one constituted government against another. This leaflet was issued by the Azad Hind Fauj (Free India Army) of the Japanese puppet Subhas Chandra Bose. (Singapore, then called Shonan, 1943 and 1944.) The leaflet avoids direct

reference to the Japanese, and is therefore "black" propaganda. Its theme is simple: the British are alleged to eat while the Hindus starve. At the time, this argument had some plausibility. There was famine in Bengal, but no white men were found among the thousands of emaciated dead.

Emphasis on Ideology.

In a sense, the experience of the past may, unfortunately, provide a clue to the future. The last two great wars have shown an increasing emphasis on ideology or political faith (see definition, page 30 below) as driving forces behind warfare, rather than the considerations of coldly calculated diplomacy. Wars become more serious, and less gentlemanly; the enemy must be taken into account not merely as a man, but as a fanatic. To the normal group-loyalty of any good soldier to his army, right or wrong, there is added the loyalty to the Ism or the Leader. Warfare thus goes back to the Wars of Faith. It is possible that techniques from the Christian-Mohammedan or from the Protestant-Catholic wars of the past could be reëxamined with a view to establishing those parts of their tested experience which may seem to be psychologically and militarily sound in our own time. How fast can converts be made from the other side? In what circumstances should an enemy word of honor be treated as valid? How can heretics (today, read "subversive elements") be uprooted? Does the enemy faith have weak points which permit enemy beliefs to be turned against personnel at the appropriate times? What unobjectionable forms should leaflets and broadcasts follow in mentioning subjects which are revered by the enemy but not by ourselves?

Figure 6: Propaganda for Illiterates. Propaganda reached out for the mass audience in World War II. Some of the most interesting developments in this line were undertaken by CBI Theater facilities and their Japanese competitors. The leaflet shown above is designed to tell its story in Hindustani (Devanagari script) or in Romanized Hindustani to Indians who could read either form, and in pictures to the illiterates. It starts with the Union Jack and ends with the Congress flag used by the puppet pro-Japanese Indian leader, Subhas Chandra Bose.

Figure 7: Propaganda Through News. News is one of the best carriers of psychological warfare to the enemy. One of these

newspapers is directed by the Allies to the German troops in the Ægean Islands; the other by the Germans to the Americans in France. Of the two, the Allied paper (in German) is the more professional job. Note the separation of appeals from the news, the greater newsworthiness of the news columns, and the explanation provided for third-party civilians in their own Greek language (top right).

The expansion of the Islamic Faith-and-Empire provides a great deal of procedural information which cannot be neglected in our time. It has been said that men's faith should not be destroyed by violence, and that force alone is insufficient to change the minds of men. If this were true, it would mean that Germany can never be de-Nazified, and that there is no hope that the democratic peoples captured by totalitarian powers can adjust themselves to their new overlords or, if adjusted, can be converted back to free principles. In reality warfare by Mohammed's captains and successors demonstrated two principles of long-range psychological warfare which are still valid today:

A people can be converted from one faith to the other if given the choice between conversion and extermination, stubborn individuals being rooted out. To effect the initial conversion, participation in the public ceremonies and formal language of the new faith must be required. Sustained counterintelligence must remain on the alert against backsliders, but formal acceptance will become genuine acceptance if all public media of expression are denied the vanquished faith.

If immediate wholesale conversion would require military operations that were too extensive or severe, the same result can be effected by toleration of the objectionable faith, combined with the issuance of genuine privileges to the new, preferred faith. The conquered people are left in the private, humble enjoyment of their old beliefs and folkways; but all participation in public life, whether political, cultural or economic, is conditioned on acceptance of the

new faith. In this manner, all up-rising members of the society will move in a few generations over to the new faith in the process of becoming rich, powerful, or learned; what is left of the old faith will be a gutter superstition, possessing neither power nor majesty.

These two rules worked once in the rise of Islam. They were applied again by Nazi overlords during World War II, the former in Poland, the Ukraine and Byelorussia, the latter in Holland, Belgium, Norway and other Western countries. The rules will probably be seen in action again. The former process is difficult and bloody, but quick; the latter is as sure as a steam-roller. If Christians, or democrats, or progressives—whatever free men may be called—are put in a position of underprivilege and shame for their beliefs, and if the door is left open to voluntary conversion, so that anyone who wants to can come over to the winning side, the winning side will sooner or later convert almost everyone who is capable of making trouble. (In the language of Vilfredo Pareto, this would probably be termed "capture of the rising elite"; in the language of present-day Marxists, this would be described as "utilization of potential leadership cadres from historically superseded classes"; in the language of practical politics, it means "cut in the smart boys from the opposition, so that they can't set up a racket of their own.")

Figure 8: One of the Mongol Secret Weapons. The Mongol conquerors used rumor and terror in order to increase their military effectiveness. Once they came to power, they used spectacular military displays as a means of intimidating conquered peoples. This old French engraving shows a war-howdah mounted on four elephants allegedly used by Kublai Khan, grandnephew to Genghis Khan and friend of Marco Polo the Venetian. Obviously impractical for field use, the vehicle is well suited for ceremonial display and mere mention of it is a factor for "warfare psychologically waged."

The Black Propaganda Of Genghis Khan.

Another demonstration of psychological warfare in the past was so effective that its results linger to this day. It is commonly thought that the greatest conqueror the world has seen—Temujin, the Genghis Khan—effected his Mongol conquests with "limitless hordes" of wild Tatar horsemen, who flooded the world by weight of sheer numbers. Recent research shows that the sparsely settled countryside of Inner Asia could not have produced populations heavy enough to overwhelm the densely settled areas of the great Mongol periphery by weight alone. The empire of the Khan was built on bold military inventiveness—the use of highly mobile forces, the full use of intelligence, the coordination of half-global strategy, the application of propaganda in all its forms.⁶ The Mongols were fighting the Sung Dynasty in

China and the Holy Roman Empire in Prussia four thousand miles apart when neither of their adversaries knew (in more than rumor) that the other existed. The Mongols used espionage to plan their campaigns and deliberately used rumor and other means to exaggerate accounts of their own huge numbers, stupidity, and ferocity. They did not care what their enemies thought as long as the enemies became frightened. Europeans described light, hard-hitting *numerically inferior* cavalry as a "numberless horde" because Mongol agents whispered such a story in the streets. To this day most Europeans do not appreciate the lightness of the forces nor the cold intelligence of command with which the Mongols hit them seven centuries ago.

Genghis even used the spies of the enemy as a means of frightening the enemy. When spies were at hand he indoctrinated them with rumors concerning his own forces. Let the first European biographer of Genghis tell, in his own now- quaint words, how Genghis put the bee on Khorezm (Carizme):

And a Historian, to describe their Strength and Number, makes the Spies whom the King of *Carizme* had sent to view them, speak thus: They are, say they to the Sultan, all compleat Men, vigorous, and look like Wrestlers; they breathe nothing but War and Blood, and show so great an Impatience to fight, that the Generals can scarce moderate it; yet though they appear thus fiery, they keep themselves within the bounds of a strict Obedience to Command, and are intirely devoted to their Prince; they are contented with any sort of Food, and are not curious in the choice of Beasts to eat, like Mussulmen [Mohammedans], so that they are subsisted without much trouble; and they not only eat Swines-Flesh, but feed upon Wolves, Bears, and Dogs, when they have no other Meat, making no distinction between what was lawful to eat, and what was forbidden; and the Necessity for supporting Life takes from them all the Dislike which the *Mahometans* have for many sorts of Animals; As to their Number, (they concluded) *Genghizcan's* Troops seem'd like the Grasshoppers, impossible to be number'd.

In reality, this Prince making a Review of his Army, found it to consist of seven hundred thousand men....⁷

Enemy espionage can now—as formerly—prove useful if the net effect of it is to lower enemy morale. The ruler and people of Khorezm put up a terrific fight, nevertheless, despite their expectation of being attacked by wolf-eating wrestlers without number; but they left the initiative in Genghis' hands and were doomed.

However good the Mongols were in strategic and tactical propaganda, they never solved the problem of consolidation propaganda (see page 46, below). They did not win the real loyalty of the peoples whom they conquered; unlike the Chinese, who replaced conquered populations with their own people, or the Mohammedans, who converted conquered peoples, the Mongols simply maintained law and order, collected taxes, and sat on top of the world for a few generations. Then their world stirred beneath them, and they were gone.

The Blindness Of John Milton.

Moving across the centuries for an example, it is interesting to note that John Milton, author of *Paradise Lost* and of other priceless books of the English-speaking world, went blind because he was so busy conducting Oliver Cromwell's psychological warfare that he disregarded the doctors' warning and abused his ailing sight. And the sad thing about it was that it was not very good psychological warfare.

Milton fell into the common booby-trap of refuting his opponents item by item, thus leaving them the strong affirmative position, instead of providing a positive and teachable statement of his own faith. He was Latin Secretary to the Council, in that Commonwealth of England which was—to its contemporaries in Europe—such a novel, dreadful, and seditious form of government. The English had killed their king, by somewhat offhanded legal procedures,

and had gone under the Cromwellian dictatorship. It was possible for their opponents to attack them from two sides at once. Believers in monarchy could call the English murderous king-killers (a charge as serious in those times as the charge of anarchism or free love in this); believers in order and liberty could call the British slaves of a tyrant. A Frenchman called Claude de Saumaise (in Latin form, Salmasius) wrote a highly critical book about the English, and Milton seems to have lost his temper and his judgment.

In his two books against Salmasius, Milton then committed almost every mistake in the whole schedule of psychological warfare. He moved from his own ground of argument over to the enemy's. He wrote at excessive length. He indulged in some of the nastiest name-calling to be found in literature, and went into considerable detail to describe Salmasius in unattractive terms. He slung mud whenever he could. The books are read today, under compulsion, by Ph.D. candidates, but no one else is known to find them attractive. It is not possible to find that these books had any lasting influence in their own time. (In these texts written by Milton in Latin but now available in English, Army men wearying of the monotonous phraseology of basic military invective can find extensive additions to their vocabulary.) Milton turned to disappointment and poetry; the world is the gainer.

The vocabulary of seventeenth-century propaganda had a strident tone which is, perhaps unfortunately, getting to be characteristic of the twentieth century. The following epithets sound like an American Legion description of Communists, or a Communist description of the Polish democrats, yet they were applied in a book by a Lutheran to Quakers. The title of the tirade reads, in part:

... a description of the ... new Quakers, making known the sum of their manifold blasphemous opinions, dangerous practices, Godless crimes, attempts to subvert civil government in the churches and in

the community life of the world; together with their idiotic games, their laughable action and behavior, which is enough to make sober Christian persons breathless, and which is like death, and which can display the lazy stinking cadaver of their fanatical doctrines....

In its first few pages, the book accuses the Quakers of obscenity, adultery, civil commotion, conspiracy, blasphemy, subversion and lunacy.⁸ Milton was not out of fashion in applying bad manners to propaganda. It is merely regrettable that he did not transcend the frailties of his time.

Other Instances From History.

Innumerable other instances of propaganda in warfare and diplomacy could be culled out of history; these would not mean much if they were presented as mere story-telling. The cultural factors would have to be figured out; the military situation would need to be appraised in realistic terms; the media available for psychological warfare would have to be charted pretty carefully, before the instances would become usable examples. Here are some of the most promising topics:

Naval psychological warfare techniques used by the Caribbean pirates to unnerve prospective victims.

Cortez's use of horses as psychological disseminators of terror among the Aztecs, along with his exploitation of Mexican legends concerning the Fair God.

The failure of Turkish psychological warfare in the great campaigns of 1683 which left the issue one of purely physical means and cost Turkey the possible hegemony of central Europe.

The propaganda methods of the British East India Company in the conquest of India against overwhelming

Indian numerical superiority. (Edmond Taylor mentions these in his *Richer by Asia*.)

The preventive psychological warfare system set up by the Tokugawa shoguns after 1636, which bottled up the brains of the Japanese through more rigorous control than has ever been established elsewhere over civilized people.

The field psychological warfare of the Manchus, who conquered China against odds running as much as 400 to one against them, and who used terror as a means of nullifying Chinese superiority.

The propaganda of the European feudal classes against the peasant revolts, which identified the peasants with filth, anarchy, murder, and cruelty.

The Inquisition considered as a psychological warfare facility of the Spanish Empire.

The agitational practices of the French Revolutionaries.

Early uses of rockets and balloons for psychological effect.

The beginnings of leaflet-printing as an adjunct to field operations.

Such a list just begins to touch on subjects which can and should be investigated, either as staff studies or by civilian historians. Collection of the materials and framing of sound doctrines for psychological warfare are no minor task.

Figure 9: Black Propaganda from the British Underground, 1690. When William of Orange took the crown of England away from the timid rascal, James II, he met opposition from the Loyalists devoted to the Stuarts. This broadsheet demonstrates an early form of black propaganda. It also provides a good instance of propaganda material borrowing a familiar form of expression in order to get its message across, in this case, the tradesman's enumeration of debit and credit.

Figure 10: Secret American Propaganda Subverting the Redcoats. Readers of Charles Dickens' great novel, *Barnaby Rudge*, will remember that anti-Catholicism was a lively

propaganda issue in England at the time of the American Revolution. This American propaganda avoids discussion of the theme of American independence—a topic on which Englishmen were liable to hold united opinions—and instead attempts to subvert British troops by means of the anti-Catholic appeal. (Original source unknown; from War Department files. Probable date, 1775.)

PROSPECT HILL.	BUNKER HILL.
I. Seven Dollars a Month. — —	I. Three Pence a Day.
II. Fresh Provisions, and in Plenty. — —	II. Rotten Salt Pork.
III. Health. — — —	III. The Scurvy.
IV. Freedom, Ease, Affluence and a good Farm.	IV. Slavery, Beggary and Want.

Figure 11: Desertion Leaflet from Bunker Hill. This leaflet is as valid today as the day it was written. No source is indicated, but neither is any attempt made to suggest a false source different from the true one; it is in modern parlance "grey" propaganda. Wealth, food, health and economic status are played up simultaneously; difficult political issues are not argued—they are sidestepped.

The American Revolution.

In the American Revolution, psychological warfare played a very important role. The Whig campaign of propaganda which led up to colonial defiance of Britain was energetic and expert in character, and the very opening of hostilities was marked by passionate appeals to the civilian population in the form of handbills. The American forces at the Battle of Bunker Hill used one of the earliest versions of front-line combat propaganda (see [Figure 11](#)). The appeal was as direct as could be wished. Artful use was made of the sharp class distinctions then existing between British officers and enlisted men; fear was exploited as an aid to persuasion; the language was pointed. Even in our own time, the Bunker Hill propaganda leaflet stands as a classic example of how to do good field propaganda.

The Americans made extensive use of the press.⁹ When the newspaper proprietors veered too far to the Loyalist side, they were warned to keep to a more Patriotic line. If, in the face of counter-threats from the Loyalists, the newspaper threatened going out of business altogether, it was warned that suspension of publication would be taken as treason to America. The Whigs, before hostilities, and their successors, the Patriots of the war period, showed a keen interest in keeping the press going and in making sure that their side of the story got out and got circulated rapidly. In intimidation and control of the press, they far outdistanced the British, whose papers circulated chiefly within the big cities held as British citadels throughout the war. Political reasoning, economic arguments, allegations concerning the course of the war, and atrocity stories all played a role.

Figure 12: Money as a Carrier of Propaganda. The note on the left above is French revolutionary currency; observe the use of revolutionary slogans. Next to it is the famous Russian 10,000 ruble bill which calls for the world revolution in seven languages. The Japanese peso note (at top of page 22) carries American propaganda on the reverse; captured notes were overprinted by Psychological Warfare Branch during the Philippine campaign and

dropped back on the enemy. The two five-rupee notes date from the Japanese occupation of Burma. The lower of the two was issued by Americans as a means of deriding the Japanese.

George Washington himself, as commander of the Continental forces, showed a keen interest in war propaganda and in his just, moderate political and military measures provided a policy base from which Patriot propagandists could operate.

Some wars are profoundly affected by a book written on one side or the other; the American revolutionary war was one of these. Thomas Paine's *Common Sense* (issued as a widely sold series of pamphlets) swept American opinion like wildfire; it stated some of the fundamentals of American thinking, and put its bold but reasonable revolutionary case in such simple terms that even conservatives in the Patriot group could not resist using it for propaganda purposes.¹⁰ *Common Sense* has become a classic of American literature, but it has its place in history too, as "the book that won the war." Other pamphleteers, with the redoubtable Sam Adams in the lead, also did well.

American experience in the Mexican war was less glorious. The Mexicans waged psychological warfare against us with considerable effect, ending up with traitor American artillerymen dealing out heavy murder to the American troops outside Mexico city. Historians in both countries gloss over the treason and subversion which occurred on each side.

In the Civil War, psychological warfare was practised by both Lincoln and the Confederacy in establishing propaganda instrumentalities in England and on the continent of Europe. The Northern use of Negro troops, which was followed, at the end of the war by the Confederate plans for raising Negro troops, did not become the major propaganda issue it might have because of the

community of feeling on the two sides, indecision on each side as to the purpose of the war (apart from the basic issue of union or disunion), and the persistence of politics-as-usual both North and South of the battle line.

Boers And Burmese.

In the latter part of the nineteenth century, two sets of British wars indicate the effect psychological warfare can play. The British conquered both Burma and the Boers. The Burmese were more numerous, had the larger country, and (if they had had leadership comparable to the Japanese leadership of the time) could have developed the larger military potential. But Burma was conquered by the British in a final war which went on quietly and ingloriously. No nation came to their aid. They did not even get a chance to surrender. The British simply ended the war in the middle by announcing the end of the Burmese government, and by making a one-sided declaration that Burma was annexed to the Empire of India. The political death of Burma occurred on 1 January 1886, but the event has been forgotten.

The Boers, on the other hand, made a stir throughout the world. They got in touch with the Germans, Irish, Americans, French, Dutch, and everybody else who might criticize Britain. They stated their case loudly and often. They waged commando warfare, adding the word *commando* to international military parlance, and sent small units deep into the British rear, setting off a mad uproar and making the world press go crazy with excitement. When they finally gave in, it was on reasonable terms for themselves; they left the British with an internationally blacked eye.

Nobody remembered the Burmese; everybody remembered the Boers. The Boers used every means they

could think of; they did everything they could. They even captured Winston Churchill.

These examples may show that the military role of propaganda and related operations is not as obscure or intangible as it may have seemed. They cannot be considered history but must be regarded as a plea for the writing of history. More recent experience is another question, and involves tracing the doctrines pertaining to psychological warfare which have now become established military procedure in the modern armies.

CHAPTER 2

The Function of Psychological Warfare

Psychological warfare in the broad sense, consists of the application of parts of the science called psychology to the conduct of war; in the narrow sense, psychological warfare comprises the use of propaganda against an enemy, together with such military operational measures as may supplement the propaganda. Propaganda may be described, in turn, as organized persuasion by non-violent means. War itself may be considered to be, among other things, a violent form of persuasion. Thus if an American fire-raid burns up a Japanese city, the burning is calculated to dissuade the Japanese from further warfare by denying the Japanese further physical means of war and by simultaneously hurting them enough to cause surrender. If, after the fire-raid, we drop leaflets telling them to surrender, the propaganda can be considered an extension of persuasion—less violent this time, and usually less effective, but nevertheless an integral part of the single process of making the enemy stop fighting.

Neither warfare nor psychology is a new subject. Each is as old as man. Warfare, being the more practical and plain subject, has a far older written history. This is especially the case since much of what is now called psychology was formerly studied under the heading of religion, ethics, literature, politics, or medicine. Modern psychological warfare has become self-conscious in using modern scientific psychology as a tool.

In World War II the enemies of the United States were more fanatical than the people and leaders of the United States. The consequence was that the Americans could use and apply any expedient psychological weapon which either science or our version of common sense provided. We did not have to square it with Emperor myths, the Führer principle or some other rigid, fanatical philosophy. The enemy enjoyed the positive advantage of having an indoctrinated army and people; we enjoyed the countervailing advantage of having skeptical people, with no inward theology that hampered our propaganda operations. It is no negligible matter to be able to use the latest findings of psychological science in a swift, bold manner. The scientific character of our psychology puts us ahead of opponents wrapped up in dogmatism who must check their propaganda against such articles of faith as Aryan racialism or the Hegelian philosophy of history.

Psychological Warfare as a Branch of Psychology.

Good propaganda can be conducted by persons with no knowledge of formal psychology. The human touch, the inventive mind, the forceful appeal—things such as these appear in the writings of gifted persons. Thomas Paine never read a word of Freud or Pavlov, yet Paine's arguments during the Revolutionary War played subtly on every appeal which a modern psychologist could catalogue. But war

cannot, in modern times, assume a statistical expectation of talent. Psychology makes it possible for the able but ordinary statesman or officer to calculate his persuasion systematically and to obtain by planning those results which greater men might hit upon by genius.

What can psychology do for warfare?

In the first place, the psychologist can bring to the attention of the soldier those elements of the human mind which are usually kept out of sight. He can show how to convert lust into resentment, individual resourcefulness into mass cowardice, friction into distrust, prejudice into fury. He does so by going down to the *unconscious* mind for his source materials. (During world War II, the fact that Chinese babies remain unimpeded while they commit a nuisance, while Japanese babies are either intercepted or punished if they make a mess in the wrong place, was found to be of significant importance in planning psychological warfare. See below, page [154](#).)

In the second place the psychologist can set up techniques for finding out how the enemy really does feel. Some of the worst blunders of history have arisen from miscalculation of the enemy state of mind. By using the familiar statistical and questionnaire procedures, the psychologist can quiz a small cross section of enemy prisoners and from the results estimate the mentality of an entire enemy theater of war at a given period. If he does not have the prisoners handy, he can accomplish much the same end by an analysis of the news and propaganda which the enemy authorities transmit to their own troops and people. By establishing enemy opinion and morale factors he can hazard a reasoned forecast as to how the enemy troops will behave under specific conditions.

In the third place, the psychologist can help the military psychological warfare operator by helping him maintain his

sense of mission and of proportion. The deadliest danger of propaganda consists of its being issued by the propagandist for his own edification. This sterile and ineffectual amusement can disguise the complete failure of the propaganda as propaganda. There is a genuine pleasure in talking back, particularly to an enemy. The propagandist, especially in wartime, is apt to tell the enemy what he thinks of him, or to deride enemy weaknesses. But to have told the Nazis, for example, "You Germans are a pack of murderous baboons and your Hitler is a demented oaf. Your women are slobs, your children are halfwits, your literature is gibberish and your cooking is garbage," and so on, would have stiffened the German will to fight. The propagandist must tell the enemy those things which the enemy will heed; he must keep his private emotionalism out of the operation. The psychologist can teach the propaganda operator how to be objective, systematic, cold. For combat operations, it does not matter how much a division commander may dislike the enemy; for psychological warfare purposes, he must consider how to persuade them, even though he may privately thirst for their destruction. The indulgence of hatred is not a working part of the soldier's mission; to some it may be helpful; to others, not. The useful mission consists solely of making the enemy stop fighting, by combat or other means. But when the soldier turns to propaganda, he may need the advice of a psychologist in keeping his own feelings out of it.

Finally, the psychologist can prescribe media—radio, leaflets, loudspeakers, whispering agents, returned enemy soldiers, and so forth. He can indicate when and when not to use any given medium. He can, in conjunction with operations and intelligence officers, plan the full use of all available psychological resources. He can coordinate the timing of propaganda with military, economic or political situations.

The psychologist does not have to be present in person to give this advice. He does not have to be a man with an M.D. or Ph. D. and years of postgraduate training. He can be present in the manuals he writes, in the indoctrination courses for psychological warfare officers he sets up, in the current propaganda line he dictates by radio. It is useful to have him in the field, particularly at the higher command headquarters, but he is not indispensable. The psychologist in person can be dispensed with; the methods of scientific psychology cannot. (Further on, throughout this book, reference will be made to current psychological literature. The general history of psychology is described in readable terms in Gregory Zilboorg and George W. Henry, *A History of Medical Psychology*, New York, 1941, and in Lowell S. Selling, *Men Against Madness*, New York, 1940, cheap edition, 1942.)

Propaganda can be conducted by rule of thumb. But only a genius can make it work well by playing his hunches. It can become true psychological warfare, scientific in spirit and developed as a teachable skill, only by having its premises clearly stated, its mission defined, its instruments put in systematic readiness, and its operations subject to at least partial check, only by the use of techniques borrowed from science. Of all the sciences, psychology is the nearest, though anthropology, sociology, political science, economics, area studies and other specialties all have something to contribute; but it is psychology which indicates the need of the others.

Psychological Warfare as a Part of War.

An infantry officer does not need to study the whole nature of war, in order to find his own job. Tradition, military skill, discipline, sound doctrine—these have done the job for him. Sun Tzu, Vegetius, Frederick, Clausewitz and a host of lesser

writers on war have established the place of combat in war, and have appraised its general character.

How much the traditional doctrines may be altered in the terrible light of atomic explosion, no one knows; but though the weapons are novel, the wielders of the weapons will still be men. The motives and weaknesses within war remain ancient and human, however novel and dreadful the mechanical expedients adopted to express them.

Warfare as a whole is traditionally well defined, and psychological warfare can be understood only in relation to the whole process. It is no mere tool, to be used on special occasion. It has become a pervasive element in the military and security situation of every power on earth.

Psychological warfare is a part of war. The simplest, plainest thing which can be said of war—any sort of war, anywhere, anytime—is that it is *an official fight between men*. Combat, killing, and even large-scale group struggle are known elsewhere in the animal kingdom, but war is not. All sorts of creatures fight; but only men declare, wage, and terminate war; and they do so only against other men.

Formally, war may be defined as the "reciprocal application of violence by public, armed bodies."

If it is not *reciprocal*, it is not war, the killing of persons who do not defend themselves is not war, but slaughter, massacre, or punishment.

If the bodies involved are not *public*, their violence is not war. Even our enemies in World War II were relatively careful about this distinction, because they did not know how soon or easily a violation of the rules might be scored against them. To be public, the combatants need not be legal—that is, constitutionally set up; it suffices, according to international usage, for the fighters to have a reasonable minimum of numbers, some kind of identification, and a

purpose which is political. If you shoot your neighbor, you will be committing mere murder; but if you gather twenty or thirty friends, together, tie a red handkerchief around the left arm of each man, announce that you are out to overthrow the government of the United States, and *then* shoot your neighbor as a counterrevolutionary impediment to the new order of things, you can have the satisfaction of having waged war. (In practical terms, this means that you will be put to death for treason and rebellion, not merely for murder.)

Finally, war must be *violent*. According to the law of modern states, all the way from Iceland to the Yemen, economic, political, or moral pressure is not war; war is the legalization, in behalf of the state, of things which no individual may lawfully do in time of peace. As a matter of fact, even in time of war you cannot kill the enemy unless you do so on behalf of the state; if you had shot a Japanese creditor of yours privately, or even shot a Japanese soldier when you yourself were out of uniform, you might properly and lawfully have been put to death for murder—either by our courts or by the enemies'. (This is among the charges which recur in the war trials. The Germans and Japanese killed persons whom even war did not entitle them to kill.)

The governments of the modern world are jealous of their own monopoly of violence. War is the highest exercise of that violence, and modern war is no simple reversion to savagery. The General Staffs would not be needed if war were only an uncomplicated orgy of homicide—a mere getting-mad and throat-cutting season in the life of man. Quite to the contrary, modern war—as a function of modern society—reflects the institutional, political complexity from which it comes. A modern battle is a formal, ceremonialized and technically intricate operation. You must kill just the right people, in just the right way, with the right timing, in

the proper place, for avowed purposes. Otherwise you make a mess of the whole show, and—what is worse—you lose.

Why must you fight just so and so, there and not here, now and not then? The answer is simple: you are fighting against *men*. Your purpose in fighting is to make them change their minds. It is figuratively true to say that the war we have just won was a peculiar kind of advertising campaign, designed to make the Germans and Japanese like us and our way of doing things. They did not like us much, but we gave them alternatives far worse than liking us, so that they became peaceful.

Sometimes individuals will be unpersuadable. Then they must be killed or neutralized by other purely physical means—such as isolation or imprisonment. (Some Nazis, perhaps including the Führer himself, found our world repellent or incomprehensible and died because they could not make themselves surrender. In the Pacific many Japanese had to be killed before they became acceptable to us.) But such is man, that most individuals will stop fighting at some point short of extinction; that point is reached when one of two things happens:

Either, the defeated people may lose their sense of organization, fail to decide on leaders and methods, and give up because they can no longer fight as a group. This happened to the American Southerners in April, 1865. The President and Cabinet of the Confederate States of America got on the train at Richmond; the men who got off farther down the line were "refugees." Something happened to them and to the people about them, so that Mr. Davis no longer thought of himself as President Davis, and other people no longer accepted his commands. This almost happened in Germany in 1945 except for Admiral Doenitz.

Or, the defeated people can retain their sense of organization, and can use their political organization for the purpose of getting in touch with the enemy, arranging the end of the war, and preparing, through organized means, to comply with the wishes of the conquerors. That happened when Britain acknowledged American independence; when the Boers recognized British sovereignty; when Finland signed what Russia had dictated; and when Japan gave up.

Sometimes these things are mixed. The people might wish to make peace, but may find that their government is not recognized by the enemy. Or the victors may think that they have smashed the enemy government, when the new organization is simply the old one under a slightly different name, but with the old leaders and the old ideas still prevailing.

It is plain that whatever happens wars are fought to effect a psychological change in the antagonist. They are then fought for a psychological end unless they are wars of extermination. These are rare. The United States could not find a people on the face of the earth whose ideas and language were unknown to all Americans. Where there is a chance of communication, there is always the probability that one of the antagonistic organizations (governments)—which have already cooperated to the extent of meeting one another's wishes to fight—will subsequently cooperate on terms of primary advantage to the victors. Since the organizations comprise human beings with human ways of doing things, the change must take place in the minds of those specific individuals who operate the existing government, or in the minds of enough other people for that government to be overthrown.

The fact that war is waged against the minds, not the bodies, of the enemy is attested by the comments of

military writers of all periods. The dictum of Carl von Clausewitz that "war is politics continued by other means" is simply the modern expression of a truth recognized since antiquity. War is a kind of persuasion—uneconomical, dangerous, and unpleasant, but effective when all else fails.

Ideology.

An ideology is a system of deep-rooted beliefs about fundamental questions in human life and affairs.¹¹ Ideology also plays a part in psychological warfare. A difference in beliefs which does not touch fundamentals is commonly termed a difference of *opinion*. You may believe in high tariffs; and I, in no tariff. You may believe in One World; I may not. You may support Republicans; I, Democrats. Despite these differences both of us can still believe in dollars as a method of paying income, in marriage as a system of setting up the family, in private property for most goods industrial or personal, in the Government of the United States, in majority rule, in democratic elections, in free speech, and so on.

If our difference of opinion is so inclusive that we can agree on nothing political, our differences have gone from mere opinion into the depths of *ideology*. Here the institutional framework is affected. You and I would not want to live in the same city; we could not feel safe in one another's presence; each would be afraid of the effect which the other might have on the morals of the community. If I were a Nazi, and you a democrat, you would not like the idea of my children living next door to yours. If I believed that you were a good enough creature—poor deluded devil—but that you were not fit to vote, scarcely to be trusted with property, not to be trusted as an army officer, and generally subversive and dangerous, you would find it hard to get along with me.

It was not metaphysical theories that made Protestants and Catholics burn one another's adherents as heretics in early wars. In the seventeenth century, the Protestants knew perfectly well what would happen if the Catholics got the upper hand, and the Catholics knew what would happen if the Protestants came to power. In each case the new rulers, fearful that they might be overthrown, would have suppressed the former rulers, and would have used the rack, the stake, and the dungeon as preventives of counterrevolution. Freedom cannot be accorded to persons outside the ideological pale. If an antagonist is not going to respect your freedom of speech, your property, and your personal safety, then you are not obliged to respect his. The absolute minimum of any ideology is the assumption that each person living in an ideologically uniform area (what the Nazi General Haushofer, following Rudolf Kjellen, would call a *geo-psychic* zone) will respect the personal safety, etc., of other individuals in the same area.

In our own time, we have seen Spaniards get more and more mistrustful of one another, until years of ferocious civil war were necessary before one of the two factions could feel safe. Spain went from republican unity to dictatorial unity in four years; in neither case was the unity perfect, but it was enough to give one government and one educational system control of most of the country. The other countries of the world vary in the degree of their ideological cohesion. Scandinavia seemed serene until the German invasion brought to the surface cleavages, latent and unseen, which made Quisling a quisling. Russia, Italy, Germany and various other states have made a fetish of their ideologies and have tried to define orthodoxy and heresy in such a way as to be sure of the mentality of all their people. But most of the countries of the world suffer from a considerable degree of ideological confusion—of instability of basic beliefs—without

having any immediate remedy at hand, or even seeking one.

Education.

Education is a process usually institutional by which the people of a given area transmit to their successors, their own children, the purely practical information needed in modern life, together with a lot of other teachings designed to make good men and women, good citizens, good Christians or other believers, of them. In the democratic states this process is ideological only in some parts of the curriculum; elsewhere in the field of opinions, the government seeks to control ideology only negatively—through laws concerning obscenity, blasphemy, subversion, and so on.

In the states which are ideologically self-conscious and anxious to promote a fixed mentality, the process of education is combined with agitation and regulation, so that the entire population lives under conditions approximating the psychological side of war. Heretics are put to death or are otherwise silenced. Historical materialism and the Marxian "objectivity," or the *Volk*, or *Fascismo*, or *Yamato-damashii*, or "new democracy" is set up as the touchstone of all good and evil, even in unrelated fields of activity. Education and propaganda merge into everlasting indoctrination. And when such states go to war against states which do not have propaganda machinery, the more liberal states are at a disadvantage for sheer lack of practice in the administrative and mechanical aspects of propaganda. Education is to psychological warfare what a glacier is to an avalanche. The mind is to be in both cases captured, but the speed and techniques differ.

Salesmanship.

Salesmanship is related to psychological warfare. Propaganda is often compared to another art of our time—industrialized salesmanship through mass printing and telecommunications. This bad parallel was responsible for much of the inept American propaganda overseas in the early part of the war; some of our propagandists had a fundamental misconception of the nature of wartime propaganda.

Allegiance in war is a matter of ideology, not of opinion. A man cannot want his own side to lose while remaining a good citizen in all other respects. The desire for defeat—even the acceptance of defeat—is of tragic importance to any responsible, sane person. A German who wanted the Reich to be overthrown was a traitor to Germany, just as any American who wished us to pull out of the war and exterminate American Jews would have been a traitor to his own country. These decisions cannot be compared with the choice of a toothpaste, a deodorant, or a cigarette.

Advertising succeeds in peacetime precisely because it does not matter; the choice which the consumer makes is of slight importance to himself, even though it is of importance to the seller of the product. A Dromedary cigarette and an Old Coin cigarette are both cigarettes; the man is going to smoke one anyhow. It does not matter so much to him. If Dromedaries are associated in his mind with mere tobacco, while Old Coins call up unaccountable but persistent memories of actresses' legs, he may buy Old Coins. The physical implements of propaganda were at hand in 1941-1942, but we Americans had become so accustomed to their use for trivial purposes that much of our wartime propaganda was conducted in terms of salesmanship.

In a sense, however, salesmanship does serve the military purpose of accustoming the audience to appeals both visual and auditory. The consequence is that competing, outside

propaganda can reach the domestic American audience only in competition with the local advertising. It is difficult for foreign competition to hold attention amid an almost limitless number of professionally competent commercial appeals. A Communist or Fascist party cannot get public attention in the United States by the simple expedient of a "mass meeting" of three hundred persons, or by the use of a few dozen posters in a metropolitan area. Before the political propagandist can get the public attention, he must edge his media past the soap operas, the soft drink advertisements, the bathing beauties advertising Pennsylvania crude or bright-leaf tobacco. The consequence is that outside propaganda either fails to get much public attention, or else camouflages itself to resemble and to exploit existing media. Clamorous salesmanship deadens the American citizen to his own government's propaganda, and may to a certain extent lower his civic alertness; but at the same time, salesmanship has built up a psychological Great Wall which excludes foreign or queer appeals and which renders the United States almost impervious to sudden ideological penetration from overseas.

Psychological Warfare and Public Relations.

Psychological warfare and public relations are different in the direction in which they apply. Psychological warfare is designed to reach the enemy. Public relations is designed primarily to reach the home audience. Both reach neutrals, sometimes confusingly much. In some nations, the two functions were combined in a single instrumentality, as in the Japanese *Joho Kyoku* (see page [184](#), below). The American army and navy traditions of public relations are based on the ideas that the news should be as complete as military security may permit, that it should be delivered speedily and interestingly, that it should enhance the

confidence of the people in their armed services, and that its tenor (no less than its contents) should not aid the enemy morale. These ideas are justified in terms of sound newspaper practice, but they can lead to a weak psychological warfare position when we must deal with an inventive and enterprising enemy.

It is not possible to separate public relations from psychological warfare when they use the same media. During World War II, the Office of War Information prepared elaborate water-tight plans for processing war news to different audiences; at their most unfortunate, such plans seemed to assume that the enemy would listen only to the OWI stations, and that the American public releases issued from Army and Navy would go forth to the world without being noted by the enemy. If a radio in New York or San Francisco presented a psychological warfare presentation of a stated battle or engagement, while the theater or fleet public relations officer presented a very different view, the enemy press and radio were free to choose the weaker of the two, or to quote the two American sources against each other.

Psychological Warfare and Morale Services.

All modern armies, in addition to public relations, also employ morale services facilities—officers or employees whose function it is to supply troops with entertainment, educational materials, political indoctrination, and other attention-getting materials. Morale services are the prime overt defense against enemy psychological warfare, and by a program of keeping the attention of the troops, can prevent the enemy from establishing effective communication. During World War II, the Armed Forces Radio Service of the United States established global radio service for Americans, and incidentally turned out material

of top importance to United States propaganda. Naturally, enemy and allied peoples would pay more serious heed to communications from Americans to Americans than they would to materials which they knew had been concocted for themselves. The American morale services in the last war indignantly rejected the notion that they were a major propaganda facility, rightfully insisting that their audience counted on getting plain information, plain news, and plain education without ulterior propaganda content. The fact that in a theater of war *all communication has propaganda effect* was not always taken into account, and only on one or two critical occasions was there coordination of stress and timing.

It must be said, however, that propaganda by any other name is just as sweet, and that the conviction of the propagandist that he is not a propagandist can be a real asset. Morale services provided the American forces with news, entertainment, and educational facilities. Most of the time these morale facilities had huge parasitical audiences—the global kibitzers who listened to our broadcasts, read our magazines, bought our paper-bound books on the black markets. (It was a happy day for Lienta University at Kunming, Yünnan, when the American Information and Education set-up began shipping in current literature. The long-isolated Chinese college students found themselves deluged with good American books.)

The morale services lost the opportunity to ram home to their G.I.-plus-foreign audience some of the more effective points of American psychological warfare, but they gained *as propagandists* by not admitting, even to themselves, that they *were* propagandists. Since the United States has no serious inward psychological cleavages, the general morale services function coordinated automatically with the psychological warfare function simply because both were produced by disciplined, patriotic Americans.

In the experience of the German and Soviet armies, morale services were parts of a coordinated propaganda machine which included psychological warfare, public relations, general news, and public education. In the Japanese armies, morale services were directed most particularly to physical and sentimental comforts (edible treats, picture postcards, good luck items) which bore little immediate relation to news, and less to formal propaganda.

Related Civilian Activities.

In a free nation, the big media of communication will remain uncoordinated even in time of war. The press, the stage, motion-pictures, part of the radio, book publishing and so on will continue. Psychological warfare has in such private facilities a constantly refreshed source of new material for news or for features. By a sparing but well considered liaison with censorship, psychological warfare can effect negative control of non-governmental materials, and can prevent the most overt forms of enemy propaganda from circulating on the home front.

News becomes propaganda when the person issuing it has some purpose in doing so. Even if the reporters, editors, writers involved do not have propaganda aims, the original source of the news (the person giving the interview; the friends of the correspondents, etc.) may give the news to the press with definite purposes in mind. It is not unknown for government officials to shift their rivalries from the conference room to the press, and to provide on-the-record or off-the-record materials which are in effect *ad hoc* propaganda campaigns. A psychological warfare campaign must be planned on the assumption that these civilian facilities will remain in being, and that they will be uncoordinated; the plan must allow in advance for interference, sometimes of a very damaging kind, which

comes from private operations in the same field. The combat officers can get civilian cars off the road when moving armored forces into battle but the psychological warfare officer has the difficult task of threading his way through civilian radio and other communication traffic over which he has no control.

Psychological warfare is also closely related to diplomacy. It is an indispensable ingredient of strategic deception. In the medical field, psychological warfare can profit by the experiences of the medical corps. Whenever a given condition arises among troops on one side, comparable troops on the other are apt to be facing the same condition; if the Americans are bitten by insects, the same insects will bite the enemy, and enemy soldiers can be told how much better the American facilities are for insect repulsion. Finally, psychological warfare is intimately connected with the processing of prisoners of war and with the protection of one's own captured personnel.

Psychological warfare is a field to itself, although it touches on many sciences and overlaps with all the other functions of war. It is generally divisible into three topics: the general scheme of psychological warfare, the detection and analysis of foreign psychological warfare operations, and the tactical or immediate conduct of psychological warfare. Sections of this book deal with each of these in turn. In each case it must be remembered, however, that psychological warfare is not a closed operation which can be conducted in private, but that—to be effective—psychological warfare output must be a part of the everyday living and fighting of the audiences to which it is directed.

CHAPTER 3

Definition of Psychological Warfare

Psychological warfare seeks to win military gains without military force. In some periods of history the use of psychological warfare has been considered unsportsmanlike.¹² It is natural for the skilled soldier to rely on weapons rather than on words, and after World War I there was a considerable reluctance to look further into that weapon—propaganda—which Ludendorff himself considered to be the most formidable achievement of the Allies. Nevertheless, World War II brought a large number of American officers, both Army and Navy, into the psychological warfare field: some of the best work was done without civilian aid or sponsorship. (Capt. J. A. Burden on Guadalcanal wrote his own leaflets, prepared his own public-address scripts, and did his own distributing from a borrowed Marine plane, skimming the tree tops until the Japanese shot him down into the surf. He may have heard of OWI at the time, but the civilians at OWI had not heard of him.)

Psychological warfare has become familiar. The problems of psychological warfare for the future are problems of *how better* to apply it, not of whether to apply it. Accordingly, it is to be defined more for the purpose of making it convenient and operable than for the purpose of finding out what it is. The whole world found out by demonstration, during World Wars I and II.

Psychological warfare is not defined as such in the dictionary.¹³ Definition is open game. There are three ways in which "psychological warfare" and "military propaganda" can be defined:

first, by deciding what we are talking about in a given situation, book, conversation, or study course;

second, by determining the responsibilities and authority involved in a given task;

or third, by stating the results which are believed to be accomplishable by the designated means.

Plainly, the staff officer needs a different definition from the one used by the combat officer; the political leader would use a broader definition than the one required by soldiers; the fanatic would have his own definition or—more probably—two of them; one (such as "promoting democracy" or "awakening the masses") for his own propaganda and another (such as "spreading lies," "corrupting the press," or "giving opiates to the people") for antagonistic propaganda.¹⁴ Definition is not something which can be done once and forever for any military term, since military operations change and since military definitions are critically important for establishing a chain of command.

The first method of definition is satisfactory for research purposes; it may help break a politico-military situation down into understandable components. The second method—the organizational—is usable when there exists organization with which to demonstrate the definition, such as, "Propaganda is what OWI and OSS perform." The third method, the operational or historical, is useful in evaluating situations after the time for action has passed; thus, one may say, "This is what the Germans did when they thought they were conducting propaganda."

Since the first lesson of all propaganda is *reasoned disbelief*, it would be sad and absurd for anyone to believe propaganda about propaganda. The "propaganda boys" in every army and government are experts at building up favorable cases, and they would be unusual men indeed if they failed to work up a fine account of their own performance. Propaganda cannot be given fair measurement by the claims made for it. It requires judicious

proportioning to the military operations of which it is (in wartime) normally a part.

Broad and Narrow Definitions.

The term *propaganda* springs from the name of that department of the Vatican which had the duty of propagating the faith. A multitude of definitions is available. Among Americans, Walter Lippmann, Harold Lasswell and Leonard W. Doob have done some of the most valuable critical, analytical, and historical writing, but a host of other scholars have also made contributions, some of them works of very real importance.¹⁵ For the purposes of explaining what this book is about, propaganda may be defined as follows: *Propaganda consists of the planned use of any form of communication designed to affect the minds, emotions, and action of a given group for a specific purpose.*

This may be called the broad definition, since it would include an appeal to buy Antident toothpaste, to believe in the theological principle of complete immersion,¹⁶ to buy flowers for Uncles on Uncles' Day, to slap the Japs, to fight fascism at home, or to smell nice under the arms. All of this is propaganda, by the broad definition. Since War and Navy Department usage never put the Corps of Chaplains, the PX system, the safety campaigns, or the anti-VD announcements under the rubric of propaganda, it might be desirable to narrow down the definition to exclude those forms of propaganda designed to effect private or nonpolitical purposes, and make the definition read:

Propaganda consists of the planned use of any form of public or mass-produced communication designed to affect the minds and emotions of a given group for a specific public purpose, whether military, economic, or political.

This may be termed the everyday definition of propaganda, as it is used in most of the civilian college textbooks.¹⁷ For military purposes, however, it is necessary to trim down the definition in one more direction, applying it strictly against the enemy and making it read:

Military propaganda consists of the planned use of any form of communication designed to affect the minds and emotions of a given enemy, neutral or friendly foreign group for a specific strategic or tactical purpose.

Note that if the communication is not *planned* it cannot be called propaganda. If a lieutenant stuck his head out of a tank turret and yelled at some Japs in a cave, "Come on out of there, you qwertyuiop asdfgs, or we'll zxcvb you all to hjkl, you etc.'s!," the communication may or may not work, but—in the technical sense—it is not propaganda because the lieutenant did not employ that form of communication planned and designed to affect the minds or emotions of the Japanese in the cave. Had the lieutenant given the matter thought and had he said, in the Japanese language, "Enemy persons forthwith commanded to cease resistance, otherwise American Army regrets inescapable consequences attendant upon operation of flamethrower," the remark would have been closer to propaganda.

Furthermore, propaganda must have a known purpose. This element must be included in the definition; a great deal of communication, both in wartime and in peacetime, arises because of the pleasure which it gives to the utterer, and not because of the result it is supposed to effect in the hearers. Sending the Japanese cartoons of themselves, mocking the German language, calling Italians by familiar but inelegant names—such communications cropped up during the war. The senders got a lot of fun out of the message but the purpose was unintelligently considered.

The actual effect of the messages was to annoy the enemy, stiffening his will-to-resist. (Screams of rage had a place in primitive war; in modern military propaganda they are too expensive a luxury to be tolerated. Planned annoyance of the enemy does, of course, have its role—a minor, rare and special one.)

"Psychological warfare" is simple enough to understand if it is simply regarded as application of propaganda to the purposes of war, as in the following definition:

Psychological warfare comprises the use of propaganda against an enemy, together with such other operational measures of a military, economic, or political nature as may be required to supplement propaganda.

In this sense, "psychological warfare" is a known operation which was carried on very successfully during World War II under the authority of the Combined and Joint Chiefs of Staff. It is in this sense that some kind of a "Psychological Warfare Unit" was developed in every major theater of war, and that the American military assimilated the doctrines of "psychological warfare."

However, this is only one of several ways of using the term, "psychological warfare." There is, in particular, one other sense, in which the term became unpleasantly familiar, during the German conquest of Europe, the sense of *warfare psychologically waged*. In the American use of the term, psychological warfare was the supplementing of normal military operations by the use of mass communications; in the Nazi sense of the term, it was the calculation and execution of both political and military strategy on studied psychological grounds. For the American uses, it was modification of traditional warfare by the effective, generous use of a new weapon; for the Germans it involved a transformation of the process of war itself. This is

an important enough distinction to warrant separate consideration.

Warfare Psychologically Waged.

Various labels were devised to name Hitler's queer, terrifying strategy for the period 1936-1941. One writer, Edmond Taylor, called it "*the strategy of terror*" in a book by that name (Boston, 1940), and also "the war of nerves." Another, Ladislas Farago, a political journalist who started out as an authority on the Axis fifth column in the Near East and ended up in American naval psychological warfare planning, put forth a book called *German Psychological Warfare: A Critical, Annotated and Comprehensive Survey and Bibliography* (New York, 1941), which digested hundreds of German works on topics pertaining to psychology and war, much of this material concerned personnel practices, psychosomatic medicine, and other non-propaganda aspects of psychology, but the book as a whole was an impressive demonstration of how much the Germans had done to make their war scientific. Other articles and books on the Nazi "inventions" followed in rapid succession.

After the excitement had died down, it was found that the novelty of the German war effort lay in two special fields:

- first, the perfect or perfect-seeming synchronizing of political, propaganda, subversive, and military efforts;
- second, the use of the findings of modern psychology for the attainment of military goals.

The Germans set the pace, in the prewar and early war period and United Nations psychological warfare tried to keep up, even though the two efforts were different in scope and character.

In conquering Europe, the German staff apparently used opinion analysis. Much of this analysis has turned out to have been superb guesswork; at the time, it looked as though the Nazis might have found some scientific formula for determining just when a nation would cave in. In the conduct of war, the Germans waged a rapid war—which was industrially, psychologically and militarily sound, as long as it worked. Their "diplomacy of dramatic intimidation" used the war threat to its full value, with the result that the Czechoslovaks surrendered the Sudetenland without a shot and then submitted themselves to tyranny half a year later; the Germans wrung every pfennig's worth of advantage out of threatening to start war, and when they did start war, they deliberately tried to make it look as horrible as it was. The psychologists had apparently taught the German political and military intelligence people how to get workable opinion forecasts; German analysis of anti-Nazi counterpropaganda was excellent. Add all this to strategy and field operations which were incontestably brilliant: the effect was not that of mere war, but of a new kind of war—the psychological war.

The formula for the psychological war is not to be found in the books of the psychologists but in the writings of the constitutional lawyers. The totality of war is a result of dictatorship within government; total coordination results from total authority. The "secret weapon" of the Germans lay in the power which the Germans had openly given Hitler, and in his use of that power in a shrewd, ruthless, effective way. The Führer led the experts, not the experts the Führer. If the Germans surprised the world by the cold calculation of their timing, it was not because they had psychological braintrusts inventing a new warfare, but because they had a grim political freak commanding the total resources of the Reich. Even in wartime, no American President has ever exercised the authority which Hitler used in time of peace;

American Cabinet members, military and naval figures, press commentators and all sorts of people are free to kibitz, to offer their own opinions, to bring policy into the light of day. That is as it should be. The same factors which made "psychological warfare" possible in the beginning of the war were the ones which led to Germany's futile and consummate ruin in 1944-45: excessive authority, an uninformed public, centralized propaganda, and secret political planning.

That kind of "psychological warfare"—war tuned to the needs of fanatically sought lusts for power, war coordinated down to the nth degree, waged in the light of enemy opinion and aiming at the political and moral weaknesses of the enemy—is not possible within the framework of a democracy. Even from within Imperial Japan, Pearl Harbor had to be waged secretly as a *purely* naval operation; those Japanese who would have told the Board of Field Marshals and Fleet Admirals that an unannounced attack was the best way to unify all American factions *against* Japan were obviously not brought into the planning of the Pearl Harbor raid. The Japanese still had too much of their old parliamentary spirit left over, as Ambassador Grew's reports show; the military had to outsmart the home public, along with the foreigners. In the Western dictatorships, the home public is watched by élite troops, secret police, party cells, and is made the subject of psychological warfare along with the victim nations. Hitler could turn the war spirit on and off; the Japanese did not dare do so to any effective extent. "Psychological warfare" was too dictatorial a measure even for prewar Japan; it is therefore permanently out of reach of the authorities of the United States. After war starts, we are capable of surprising the enemy with such things as incendiary raids, long-range bombers, and nuclear fission; but we cannot startle with the start of war. The United States is not now capable and—under the spirit of the

Constitution, can never be capable—of surprising an enemy by the *timing of aggression*. If the same were true of all other nations, peace would seem much nearer than it does.

German psychological warfare, in the broad sense of warfare psychologically waged, depended more on political background than on psychological techniques. Disunity among the prospective victims, the complaisance of powers not immediately affected, demonstration of new weapons through frightful applications, use of a dread-of-war to harness pacifism to appeasement, the lucky geographic position of Germany at the hub of European communications—such factors made the German war of nerves seem new. Such psychological warfare is not apt to be successful elsewhere except for aggressions by dictatorships against democracies; where the democracies are irritable, tough, and alert, it will not work at all.

The psychological warfare which remains as a practical factor in war is therefore not the Hitlerian war of nerves, but the Anglo-American application of propaganda means to pre-decided strategy. Let him who will advocate American use of the war of nerves! He will not get far with commentators publishing his TOP SECRET schedule of timing, with legislators very properly catechizing him on international morality, with members of his own organization publishing their memoirs or airing their squabbles right in the middle of the operation. He would end up by amusing the enemy whom he started out to scare. Psychological warfare has its place in our military and political system, but its place is a modest one and its methods are limited by our usages, morality, and law.

Propaganda: Definitions.

Propaganda has been defined (above, page [39](#)). It remains to distinguish some of the other technical and professional terms which apply in this field. In operational terms, propaganda can be distinguished by the consideration of five elements:¹⁸

1. Source (including Media)
2. Time
3. Audience
4. Subject
5. Mission

These factors are given in approximate order of importance to the analyst, and provide a good working breakdown for propaganda analysis when expert staffs are not available. The five factors can be remembered by memorizing the initial letters in order: S-T-A-S-M. The last factor, "Mission," covers the presumed effect which the enemy seeks by dissemination of the item.

Without going into the technique of field propaganda analysis (described below, page [115](#)), it is useful to apply these analysis factors to the definition of some subordinate types of military propaganda.

Source is the most important. If the source is open and acknowledged, the government issuing it is putting the propaganda on the record before the world, and must therefore issue the propaganda with a certain amount of dignity and with an eye to the future. If the source is faked, then it is important for the government or army to make sure that the faking is a good job, and that the propaganda cannot readily be traced back. Two very different techniques are employed. Open sources require responsible public officials, preferably men with international reputations, who

will get the best effect from use of the name and facilities of the government. Use of an open source usually (but not always) implies belief of the disseminator in the veracity of his materials. Fabricated sources require persons adept at illicit imaginativeness, impromptu forgery, and general devilment, combined with a strong sense of discipline and security. The United States was so chary of mixing the two kinds of propaganda during World War II that it operated them in different categories, giving rise to the three following types:

White propaganda is issued from an acknowledged source, usually a government or an agency of a government, including military commands at various levels. This type of propaganda is associated with overt psychological operations.

Grey propaganda does not clearly identify any source.

Black propaganda purports to emanate from a source other than the true one. This type of propaganda is associated with covert psychological warfare operations.

White propaganda is shown in [figure 4](#) which does everything possible to make the message the official message of the British and American governments. The border is done up in handsome banknote fashion; the great seals of the nations are handsomely displayed; the signatures of the commanding generals are shown as further attestation of the openness and good faith of the issuer of the propaganda.

[Figure 38](#) was also prepared by British-American authority; it too had the job of making Germans surrender. But in this case, nothing was done to make the British-American source evident; indeed, every effort was made to hide the source, so that the German who read it would think that it came from within his own territory. The two different kinds of

propaganda were both of them needed; each supplemented the other but they had to be kept apart as far as possible.

In the field of radio, the difference between Covert and Overt was even more plain. During World War II, the ether over Europe was filled with appeals from radio stations both public and covert in character. The British spoke to the Germans over B.B.C., making no effort to conceal the fact that they were British. But they also spoke to the Germans over clandestine stations, which pretended to be free-lancing Nazis, German army stations, or freedom group operations. The Germans, comparably, beamed official German news to the United States in English; but they also pretended to be Americans broadcasting from an isolationist radio in the American mid-west. In some cases, the belligerent powers used the identical radio transmission facilities for overt and covert propaganda. Radio Saipan, under the Americans, was most of the time the relay for the acknowledged San Francisco programs; intermittently OSS borrowed it, and it then became a "Japanese" station. (Under such conditions, black radio cannot remain black very long.)

In terms of the timing, propaganda can be subdivided into two further categories, strategic and tactical. Strategic propaganda is conducted with no immediate effect in view. Its purpose is to wear down the enemy by psychological changes that may extend over months. [Figure 19](#), warning the Germans of the remote future, is an example of this in leaflet form. Tactical propaganda is operated to accomplish an immediate short-range purpose, and normally does not cover a long time-span. Only in a few cases, such as leaflets for a besieged enemy unit, is tactical propaganda run for a purpose that encompasses a long delay between the operation and the expected result. These two forms may be defined as follows:

Strategic propaganda is directed at enemy forces, enemy peoples, and enemy-occupied areas in their entirety, and—in coordination with strategic planning—is designed to effectuate results planned and sought over a period of weeks, months, or years.

Tactical propaganda is directed at specific audiences, usually named, and is prepared and executed in support of localized combat operations.

Another set of distinctions can be set up, depending on the relationship of the propaganda operation to the simultaneous hostile propaganda operations, namely offensive or defensive propaganda. Before the advent of World War II, this distinction appeared to be significant but experience on almost all fronts indicated that it meant little when applied to day-in day-out necessities of actual practice. Propaganda is so intimately keyed to the news and opinion situation that it does not usually bear elaborate pre-operational analysis. Elaborate planning very often ends up in the locked files; the distinction of offensive and defensive means little in routine work. However, for the sake of the record, the distinction can be listed:

Defensive propaganda is designed to maintain an accepted and operating form of social or other public action. (Soviet propaganda for the Five Year Plans is a conspicuous instance.)

Offensive propaganda is designed to interrupt social action not desired by the propagandist, or to predispose to social action which he desires, either through *revolutionary* means (within the same society) or *international*, either diplomatic or belligerent (between different societies).

Another set of distinctions arises from the purpose which the propaganda officer or group may have in mind for the people whom he addresses. These distinctions, like offensive-defensive, are theoretical rather than practical, and did not often appear in the actual operations, although all the more hush-hush plans made elaborate references to them:

Conversionary propaganda is designed to change the emotional or practical allegiance of individuals from one group to another.

Divisive propaganda is designed to split apart the component subgroups of the enemy and thereby reduce the effectiveness of the enemy group considered as a single unit. (An instance is provided by the Allied effort to make German Catholics think first as Catholics, then as Germans.)

Consolidation propaganda is directed toward civil populations in areas occupied by a military force and is designed to insure compliance with the commands or policies promulgated by the commander of the occupying force.

Counterpropaganda is designed to refute a specific point or theme of enemy propaganda. (Japanese charges of American atrocities usually followed American charges of Japanese atrocities.)

Except for those terms that are firmly rooted in the literature of propaganda, most of the distinctions can be forgotten; the basic distinctions are those determined by the task involved, and not by the propaganda content.

World War II brought up a very sore issue between military and civilians with respect to propaganda in areas with unsettled governments—such as Darlanist North Africa,

Communist China, all of Siam. (See, also, discussion of World War II, below, page 77 ff.) In these areas every military act involved the definition of the political relations of the United States Government to the governments locally enjoying authority. Were we at war with them, or not? And so on. In these cases, politics itself became a vital foundation to propaganda, especially when the local authorities were themselves active in the propaganda field. The American theater and unit commanders had to decide what kinds of political promises they could or could not make. In this job, they had a more difficult task than did the British, who possessed in the Political Warfare Executive a pooling facility which coordinated foreign policy with propaganda.¹⁹ Could we promise freedom from France to the Algerians? Or immunity to the Siamese who re-doublecrossed in the matter of allegiance and got ready to subvert the Japanese? Or the Yenan people who wanted us to hijack the Generalissimo as a price of their support? Or the Indonesians who might oppose the Japanese and already opposed the Dutch? Such questions transcended propaganda. Their decision made propaganda, or unmade it; but the deciding power was outside the authority of the propaganda people.

Political warfare is therefore, in administrative terms, a higher-level activity than propaganda, and may be defined as follows:

Political warfare consists of the framing of national policy in such a way as to assist propaganda or military operations, whether with respect to the direct political relations of governments with one another or in relation to groups of people possessing a political character.

Such policy-framing does not normally fall within the authority of the Army or Navy, though these may be consulted and called upon to effect appropriate military action. An outstanding instance of the use of political warfare was President Roosevelt's impromptu enunciation of the theme "Unconditional Surrender" at Casablanca. The theme affected not only our propaganda, but the types of surrenders which American generals could accept from Germans.

CHAPTER 4

The Limitations of Psychological Warfare

Psychological warfare cannot be known simply in terms of what it is; it must also be understood in relation to the limits which are imposed on it. The limitations can be described under four headings:

- political limitations;
- security limitations;
- limitations arising from media;
- limitations of personnel.

Like all limitations, these are handicaps only to the person who lacks the courage and resourcefulness to turn them into assets. Propaganda is dependent on politics, even for such

front-line requirements as "definition of the enemy," yet intelligent exploitation of political goals yields valuable results. Security is an asset to any army; its price is rarely too high a price to pay for protection, but a selective and flexible censorship can lead to positive advantages. *Media*—that is, the actual instrumentalities by which propaganda is conveyed—are the ordnance of psychological warfare. They limit the performable job but they also make it possible in the first place. And as in any military operation, success depends most of all on proper use of personnel.

Each of these merits discussion. The experience drawn upon has, in almost all instances, been that of World War II. As in most other fields, common sense runs a close second to experience as a guide in new methods of struggle.

Political Limitations of Psychological Warfare.

Politics has great influence on the content of psychological warfare. The relationship between two warring states is not one of complete severance; on the contrary, in wartime the relationship becomes abnormal, acute, sensitive. Each belligerent takes a strong interest in the other, in its affairs and weaknesses. During World War II the American armed services, government, and people learned more about the Japanese than they would have in twenty years of peacetime education. Japanese names made news. The purposes and weaknesses of the Japanese became the objects of hatred and—along with the hatred—intense scrutiny.

Each warring nation tries to turn the known enemy interest in itself into favorable channels. The propagandists of each country try to give the enemy the news which the enemy wants, while so arranging that news as to create a drop in enemy morale, to develop uncertainty in enemy

policies, to set enemy cliques into action against each other. The propagandist sometimes becomes very agitated because he recognizes as a technician propaganda opportunities which national policy prohibits his using. The propagandist who is so intent on his target that he forgets his broader responsibilities can often spoil the entire operation.

German broadcasters who emphasized the anti-capitalist character of National Socialism in the programs beamed to Eastern Europe found that B.B.C. picked up the most tactless statements and repeated them to Western Europe, where the Germans posed as anti-Bolshevik champions of private property. American attacks on the Germans for associating with Japanese monkey-men were passed along by the Japanese to the Chinese, who did not like the slur either. The most notorious example of backfiring propaganda was of course the famous "Rum, Romanism, and Rebellion" phrase, which may have made James G. Blaine lose to Grover Cleveland in the national election of 1884; the phrase was used by a Republican clergyman in New York, referring to the Democrats, and implied that the Wets (anti-prohibitionists), Catholics, and Southerners were important components in the Democratic Party. (This may have been true, but it pleased none of them to have the matter pointed out with such epithets; the phrase succeeded in its short-range purpose, that of rousing Republicans, but failed by rousing the enemy even more and offending neutral-minded persons as well.)

The balance between home-front politics and field psychological warfare is difficult to maintain. The closer the psychological warfare officer is to the enemy, the more apt he is to think of the mission in terms of getting the enemy to come on over. Why quibble about a few phrases if the words will save lives, matériel, and time? Unfortunately the phrase that is successful against the enemy on the battle

front may prove to be an irritant to the home public, with the sure consequence that the enemy will pick it up and send it back to do harm. Similarly, home-front propaganda can get out to do the theaters of operation harm: "Do your utmost—save lard!" sounds silly to men in combat areas.

This can be illustrated by the propaganda problem of the Japanese Emperor. It would have helped domestic American politics to call the Japanese Emperor a monkey, a swine, a lunatic, a witch-doctor or comparable names; some people did so. But if the American government had done so at home for the purpose of rousing its own public, the Japanese home public would have been roused even more with the net result that the Americans would have lost by such attacks. If the Russians promised—as in another instance they are reported to have done—good food and warm clothes to the Germans on the winter fronts, the Nazis passed that promise along to the Russian civilians, who would not think well of Stalin's letting Fascist invaders be plump and snug while they themselves nearly starved. For the enemy audience, it is good to portray excellent care of enemy personnel; for the home audience, it is poor. For the home audience it is sometimes good to present the enemy as ruthless lunatics, beasts in human form, cruel degenerates, and so on; but the same claims, falling into enemy hands, can be used to the disadvantage of the originator by being relayed to the enemy home audience.

Furthermore, sound psychological warfare must take account of the fact that its ultimate aim is the successful ending of the war. For the end to be successful it must occur—the fighting must stop and the nations must enter into altered but renewedly peaceful relations. Propaganda that promises the enemy too much will alienate both allies and home public. But propaganda that promises bloody vengeance hurts possible peace movements in the enemy camp. None of the great powers in World War II went so far

as to promise specific frontiers for the postwar period. They kept their promises vague, knowing that a definite promise would please somebody but alienate everyone else; furthermore, by not promising, the expectations of the hopeful parties can be kept at a higher pitch. If the French do not *know* that they will get the Saar they will fight so much the harder; but if they are promised the Saar they come in a very short while to regard the promise as a settled matter, and proceed to ask for something else. Meanwhile, other possible claimants to the Saar either have a sense of grievance or lose interest in the matter. For this reason, postwar political uncertainty can be a propaganda asset.

President Roosevelt, in his conduct of the political world role of the United States, promised Manchuria to the Chinese, Korea "in due course" to the Koreans, and the integrity of the French Colonial Empire to the French; outside of that he avoided specific promises. In another instance (to put a complicated matter baldly), the British promised Palestine to both the Arabs and to the Jews in World War I, and consequently got themselves into a political mess which, thirty years later, was still a mess.

Definition of the Enemy.

Another significant connection between politics and propaganda is found in definition of *the nature of the enemy*. For combat operations, it is easy (most of the time) to tell who the enemy is; he is the man with the other uniform, the foreign language, the funny color or physique. For psychological operations, it is not that easy. The sound psychological warfare operator will try to get enemy troops to believing that the enemy is not themselves but somebody else—the King, the Führer, the élite troops, the capitalists. He creates a situation in which he can say,

"We're not fighting *you*." (This should not be said too soon after extensive use of bombs or mortars.) "We are fighting the So-and-so's who are misleading you." Some of the handsomest propaganda of World War II was produced by the Soviet experts along this line. Before the War was over, Soviet propaganda created a whole gallery of heel-clicking reactionary German generals *on the Russian side*, and made out that the unprofessional guttersnipe Hitler was ruining the wonderful German Army in amateurish campaigns. Joseph Stalin's ringing words, "The German State and the German *Volk* remain!" gave the Russians a propaganda loophole by which they implied that Germany was not the enemy—no, not Germany! just the Nazis. This was superb psychological warfare, since the Russians had already built up the propaganda thesis that the common people (workers and peasants) were automatically—by virtue of their class loyalty—on the side of the workers' country, Russia. That left very few Germans on the other side.

For psychological warfare purposes, it is useful to define the enemy as:

- (1) the ruler;
- (2) or the ruling group;
- (3) or unspecified manipulators;
- (4) or any definite minority.

It is thoroughly unsound to define the enemy too widely. On the other hand, too narrow a definition will leave the enemy the opening for a peace offensive if the ruler dies, or if the ruling group changes part of its composition. It was fear of a peace move by the German generals, plus the desire to maintain the precarious anti-German unity of the occupied countries, which led the United States and Britain to adopt the policy of defining the German Reich rather than

Naziism as the enemy. In the instance of Japan, we defined the enemy as the militarists and "Fascists," with the capitalists a poor second, and left the Emperor and people with whom to make peace.

If the psychological warfare campaign is operated for a definite political purpose, it is possible for politics to be an aid rather than a limitation. The operator can describe his own political system in its most radiant light. He can say complimentary things about the enemy leaders or groups who might come over (though he should avoid giving them the kiss of death which the Nazis gave certain prominent American isolationists, by praising them too much). He can promise his own brand of Utopia.

If the politics are defensive, vague, well-meaning but essentially non-committed, psychological warfare has to avoid making blunders. In World War II we could not say that we were against one-party states, because our largest ally (Russia) was a one-party state. We could not attack the ruin of free enterprise by the Japanese and German governments since socialism existed on the Allied side too. We could not bring up the racial issue, because our own national composition rendered us vulnerable to racial politics at home. There was a huge catalog of *Don'ts* (usually not written down but left to individual judgment) in every propaganda office. Whenever we violated them, we paid the price in adverse opinion.

Promises.

Finally, psychological warfare must avoid promises that may not be kept. The Americans during World War II never promised much as a government, but individual American agents promised all sorts of things which could not be delivered. We promised the Dutch their homeland and

empire by implication; we promised the Indonesians self-government, also by implication; and we promised everybody, including the Japanese, access to Indonesian raw materials. It is highly probable that individual Americans, off-the-record, stated that they "expected," "hoped," or "thought" that their government would fulfill each of these promises. The three are not compatible, especially the first and second. The New York banker, James Warburg, has written a book, *Unwritten Treaty*, pointing out that the United States promised just about everything to everybody during the war (he was in OWI and he ought to know), and that it is going to take a generous, wise, and intelligent foreign policy to fulfill—even in part—the promises which we made. The promises of the loser are forgotten; he can write them off and start international policies with a clean slate. But the promises of the victor remain, and have to be carried out or else repudiated.

The psychological warfare officer should not make promises to persons in occupied territory, to friendly guerrillas, to underground movements, or to enemy troops when those promises are not backed up by word-for-word quotations from the head of his government or someone of Cabinet rank. The promises may not conform with promises which other psychological warfare officers are making to other groups. (In China, some American officers told the Chinese Communists that the Chinese Communists were wonderful people, and would be sure to get American material aid and political sympathy against Chiang Kai-shek. At the same time, other American officers told the Chinese government people that the United States did not propose to short-circuit recognition of the Chinese government, or to interfere in internal Chinese affairs. The two sets of Chinese heard about the American promises and, for a while, could not decide whether Americans were fools or liars. Much the same sort of thing happened in our dealings with French,

Serbs, and Poles.) It is a poor piece of work for a combat officer to promise elections , liberties, labor rights, or even food to people in his path, unless the rear echelon people will be able to deliver the goods when they come up. And it is an irresponsible radio or leaflet man who makes promises without finding out whether his government is in a position, in relation to the political situation, to back up the promises one way or other. His nation itself will be called a liar if he slips up.

Security Limitations.

Another serious set of limitations arises from security problems.

The very conduct of psychological warfare encroaches upon perfectionist plans for security. Security is designed to keep useful information from reaching the enemy; propaganda operations are designed to get information to him. Security is designed to keep the enemy from knowing true figures; but propaganda must have a lot of good, current, *true* information if it is to be believed. Security demands that military and naval news be withheld until the extent of the enemy's knowledge is known; propaganda is designed to tell the enemy the news faster than his own sources tell him, thus discrediting enemy news. Security demands that dubious persons, intimately associated with the enemy, be kept away from communications facilities; propaganda officers have to keep an eye open for people who speak the enemy language well, who can address the enemy sympathetically and get his attention, who have a keen appreciation of the enemy culture.

Often, it is plain, psychological warfare and security officers get in each other's way. This conflict was lessened by American censorship organization during World War II.

The United States Office of Censorship under Byron Price achieved a distinguished record of smooth, reasonable, and modest operation. It took an adult view of the intelligence of the American public, and permitted bad news to reach the public except when the Services or the White House intervened. Much of the story of this office is told in Theodore Koop's exciting book, *Weapon of Silence*,²⁰ which makes it plain that censorship sought to avoid developing negative psychological warfare campaigns on its own initiative.

The usual wartime security procedures apply with special force to psychological warfare operations. Civilian employees who are qualified as political experts, as writers, or as propaganda analysts are often well-educated and artistic. They are apt to value classified information highly for the pleasure which they can derive by violating security—that is, by showing "people they can trust" how much they are "in on" certain operations. The temptation to show off is almost irresistible. (The vice is not unknown even in military echelons.) An atmosphere of excessive security easily degenerates into melodrama, bringing out in many individuals a silly zest for displaying to others how much TOP SECRET information they possess. Where military and civilian personnel work together, this human weakness is stimulated by rivalry. Even among the Germans in World War II, propaganda groups were easily infected by an atmosphere of gossip and intrigue.

Security Procedures.

Security procedures for psychological warfare involve the usual common-sense precautions which apply to all operations, and which may be summarized in the following rules:

(1) Classification should be kept at an absolute minimum. No information should be classified unless there are genuinely strong reasons for supposing that it would benefit the enemy. Classification and declassification should be the responsibility of designated officers trained for the task. (In World War II, many American civilians classified information recklessly, with the result that all classification became a subject of disrespect. The author once found a highly classified inter-Allied plan in the hands of an elderly woman stenographer in Washington, who safeguarded the information by leaving the papers in a desk drawer which had no pull. The drawer had to be opened with a nail file and that fact comprised the "security.")

(2) Security should apply, generally speaking, to units as a whole, taking working units up to the limit of face-to-face working acquaintance as a base. It is unsound procedure to give certain individuals a higher level of information than others, since the privileged individuals will be tempted to display their inside knowledge, and the underprivileged individuals will be goaded by unwholesome, resentful, and acute curiosity. Either the entire unit should be given the information, or denied it.

(3) Security should not be applied for editorial purposes. Censorship is a separate function. Improper security procedures, vesting arbitrary powers in stated officers, may tempt the security officer to express his personal literary, artistic, or political preferences under the guise of maintaining security. The inevitable consequence is the breakdown of both security and of procedure. Censorship should be applied in conformity with national or theater censorship policies. Review and estimate of radio or leaflet output is another function.

(4) Security for printed materials is easy enough to maintain. The leaflets can be sent to the G-2 to check, or

wherever else security functions may be vested. Radio security is another problem. Experience in World War II indicates that spot news cannot wait for routine security, but must be processed through. Two types of control, supplementing one another, are desirable:

Security liaison on a 24-hour basis should be available to the radio operatives for the rapid processing of military news. The security duty officer should be indoctrinated with an attitude of cooperativeness, based on an understanding of the value of propaganda, and should conceive it as his mission to explain the needs of radio propaganda to his superiors, rather than taking the attitude of being superior to the radio operatives. There is a sound psychological reason for this. The presence of a sympathetic security officer will increase cooperativeness on the part of the propaganda broadcaster. An unsympathetic one will merely maintain the official dignity of his office and position. High morale on the part of script writers is more important than high morale of security officers.

Security supervision can be exercised by monitoring facilities: that is, the security officers can equip themselves with a good radio receiver and listen to the broadcasts without ever meeting the broadcasters. A critical frame of mind on the part of such security personnel is desirable. Unlike liaison officers, they need not be cooperative. Since their criticism applies after the operation, they can afford to apply rigorous standards. (During most of 1942 and 1943, no one in Washington had any idea of what actually *went out* from San Francisco. The civilians who broadcast to Japan received elaborate orders to do this and to do that, but the Washington policy-makers did not know what was going on the air. On one occasion, the civilian propaganda broadcasters told the Army in Washington that the information was too highly classified to be released or

circulated. The result was that Army and Navy found out what OWI was doing by receiving reports from listeners in the Pacific.)

Security liaison can check propaganda output in the process of transmission; security supervision can check the output after it goes on the air, and can transmit through channels recommendations for punitive or corrective action. The final military connection should exist (for an all-military psychological warfare group) in the person of a responsible commanding or executive officer. For a civilian group functioning under military control the military connection should lie in the hands of an officer capable of watching a great deal and of saying little. Attempts by security to act as propagandists have been found to be as disastrous as the efforts of operators to get along without security.

Media Limitations.

Psychological warfare should not broadcast into areas in which radio sets are unknown. Psychological warfare should not drop books to illiterates. These rules seem obvious but they have often been violated. Psychological warfare should not assume that an extensive news or morale campaign is going to achieve the desired results unless there is trustworthy intelligence to the effect that propaganda is getting through.

It is ridiculous to broadcast to the masses of a country when the masses are known not to have radio facilities. This was done in the anti-Japanese broadcasts of OWI, at least in the early part of the war, in which mass-audience soap operas and popular music were sent to Japan on the short-wave—this despite reports that short-wave sets were almost unknown outside governmental or plutocratic circles. What was known was that the Japanese government itself had

listening facilities, and that the content of American broadcasts was relayed through Japanese military and governmental groups. The propaganda (to fit the medium, radio) should have been designed *to affect the persons actually reached*, and not an audience known to be out of reach. The mere fact that enemy counterpropaganda mentions one's own material is nothing more than a professional exchange of compliments. Goading the enemy radio into a reply may be fun, but unless non-propagandists are known to be listening, the fun is expensive and unprofitable.

(It is really fun, though. The author suggested in the spring of 1942 that the San Francisco radio carry an item to the effect that "American art lovers" hoped the Japanese would move their priceless books and paintings away from the great cities. This was preparation for eventual nagging on the topic, "the air raids will get you if you don't watch out!" The radio civilians in San Francisco put the item on the air. Nothing was heard from the Japanese on the subject. Four days later, Radio Luxembourg [then under Nazi control, of course] broadcast in German to Europe that a spokesman for the "beastly American Air Ministry" had told the Japanese that the Americans planned to destroy cultural monuments. The Nazi commentator added that this was characteristic of the actions of uncivilized Americans. New York picked up the German broadcast. The author enjoyed seeing his item go all the way around the world, but in retrospect he wonders whether he did any good other than to please himself. He did do the actual harm of giving the Nazis another point to distort.)

Media consist simply of the facilities possessed. These are, most commonly:

- (1) Standard-wave radio;

- (2) Short-wave radio;
- (3) Loudspeakers;
- (4) Leaflets;
- (5) Pamphlets;
- (6) Books;
- (7) Novelties.

The limitations consist simply of applying the right medium at the right time. Radio broadcasts need be made only when receiving sets are known to exist. Written material should be dropped only to areas in which at least some people can read. (The OWI in China, at the request of CBI Forward Echelon Headquarters, made up the leaflet showing pictures only. This was designed for the aboriginal hillmen between China and Tibet—to tell them to rescue downed American pilots. Broadcasting to these people would have been as profitable as spitting in the ocean. None of them could read, much less understand radio.) The probable number of listeners or readers should be calculated conservatively, taking enemy policing, amount of enemy interest, customs of the people, tension among enemy troops or civilians and other appropriate factors into account.

Occasionally propaganda media exceed the expected limitations. The Americans and British dropped leaflets on Berlin. The leaflets had little key numbers in the corners, showing to which series they belonged, and could thus be arranged in series. The Germans prohibited civilians from picking up the leaflets. The Nazi authorities followed up the prohibition by sending the *Hitlerjugend* and *Hitlermädels* out to pick up the leaflets and turn them in for destruction. The boys and girls did their job with gusto. Vast quantities were turned in for destruction. What the Nazis discovered—too

late, too late—was that the schoolchildren had begun collecting the leaflets, using the key numbers to make up perfect sets. Some numbers were rarer than others, so that the Hitlerite children swapped Allied leaflets all over Berlin, trying to make up attractive albums. Mother and Father—who did not dare pick the leaflets up off the street for fear the Gestapo might be watching—found a convenient file, reasonably complete, in the room of little Fritzl or Ermintrude! The most hopeful British or American planner could not have counted on such a happy result.

Maximum Performance of Personnel.

Another limitation, to be found in any psychological warfare operation, is that imposed by the types of personnel available. It would be a rash commander who assumed that he had air support because he saw airplanes—without knowing whether air crews were available. A microphone does not make a propagandist. Personnel using the speaking voice have to be good speakers; merely knowing the language is not enough. Writing personnel must be up to the level of professional writers. On the other hand, the available personnel must not be driven above its limits of performance: often an attempt to do a too-professional job will defeat the propaganda. (When the Japanese pretended to be perfectly American, and used the corny obsolete slang of the 1920's, they aroused more contempt than they would have done had they confined themselves to rather bookish, plain English.)

The psychological warfare operation must be gauged to the personnel facilities no less than to the material facilities. (In China, the author sat in with an expert on medieval and modern Japanese art, who was writing leaflets which were to be dropped on the Japanese garrisons of the Yangtze cities. The expert wrote pure, dignified Japanese, but the Chinese-

Japanese language experts brought up the point, "Would the Japanese common soldier understand this kind of talk?" For a while, we had no plain-spoken Japanese at hand, and we had to send our Japanese leaflets from Chungking up to Yen-an, where the Japanese Communists read the leaflets and wrote back long detailed criticisms.)

Whenever the politico-military situation permits, it is sound procedure to check output with live enemies, either interned civilians or captured military personnel. A shrewd interrogator can soon find out whether the comments from the enemy jury are honest or not.

Intelligent psychological warfare procedures have often turned liabilities into assets. Absence of a good orchestra has compelled propagandists to make up current music schedules by recording enemy musical programs, re-broadcasting them with new spoken commentary. Failure to obtain native speakers (such as genuine home-grown Japanese, or Chinese with the properly slurred Wu dialect) has led to the use of substitutes that proved better than the original. There is no point in trying to establish *rapprochement* with the enemy unless you talk his language with effortless perfection on the one end of the scale—or else admit that you really are a foreigner, on the other end of the scale. It is easier to build up the image of a trustworthy enemy than it is to create trust in a traitor. Frequently the attempt to talk the enemy's own language is less successful than a frank acceptance of handicaps.

In actual practice this means that either—

- (a) the speaker should be authentically perfect in use of the enemy language, whether spoken or written as script; *or*
- (b) the speaker should make no effort to conceal his foreign accent.

In British broadcasts to Germany, for example, it was found to be desirable for the radio announcers to have British accents in their German, rather than the Viennese or Jewish lilt which many of them did have. A Nazified audience was so infected with anti-Semitism that no Jewish speaker could carry much weight, no matter how cogent his arguments nor how eloquent his appeals. The British tone in the voices of other speakers actually helped carry conviction. The Germans were prepared to listen to a genuine Britisher, and might have been disappointed if he had spoken letter-perfect *German*.²¹

Furthermore, with the perfect speaker of the enemy language there is always the question, "What is that guy doing over there?" A traitor is less appealing than an open enemy spokesman; a traitor has to be sensationally good in order to get across at all. Lord Haw Haw was one of a kind, but he seems to have had genuine theatrical talent along with a crazy zeal which persuaded his hearers that though he was on the wrong side, he did believe his own line. The perfect speaker, whether enemy renegade or friendly linguist, has an inglorious role at the beginning of war, when enemy morale is high and the enemy population has not had time to think over the problem of changing sides. Only toward the end of the war, or in any morale downgrade, the man who says, "Come on over! See? I'm here. It's fine," has a chance of being believed.

The propaganda administrator must use his personnel thoughtfully. It is a waste of talent and—in advance field units, of life as well—to impose tasks which operatives cannot handle. An American *nisei* from California should not be asked to talk slangy *Edokko* Japanese; a soldier detailed to psychological warfare, because of some special linguistic qualification, should not be considered a great journalist, radio commentator, or actor just because he speaks the right language. If he is given a microphone, and the feeling

of having an audience (one that cannot write adverse fan mail), it will be easy for the average man to overestimate the effect of his own talk. The intelligent officer tries to see his staff as the enemy would see them; he keeps their limitations in mind. If they speak the enemy language perfectly, they fall under suspicion as traitors; if they speak it poorly, they may sound like bunglers or jackasses. Nevertheless, propaganda must come from men and through words written by men, and the flavor must be fitted to the situation. Advance planning should therefore consider the available personnel as an actual factor in estimating the situation.

Counterpropaganda.

Counterpropaganda could be listed as a limitation, as the enemy combat strength is sized up in physical warfare. This, however, is one of the points at which psychological warfare differs from other forms. If the propaganda message is worth putting across, it need not be geared to what the enemy is saying. Enemy propaganda should, in well conducted operations, be taken into account only when it becomes an asset. That is, the enemy need only be heeded when he tells a whopping lie, or comes forth with a piece of hypocrisy so offensive to his own people that it needs little improvement to be adapted for counterpropaganda. Most enemy themes are beyond reach, especially those of inter-ideological warfare. The Nazis and Russians made the best propaganda against each other when they got down to the basic necessities of life, not when they were trying to weave finespun theories about each other's way of thinking or of life. Refutation is a joy; it is delightful to talk back. But the best propaganda is only incidentally counterpropaganda. It uses enemy blunders and counteracts enemy success by building up unrelated successes of its own.

This does not mean that propaganda analysis is not needed. Somewhere in every psychological warfare unit there must be an intelligence group servicing the operation. If, for example, the enemy has announced that the candy your aviators are dropping is poisoned (and has proved it by dropping some of "your" candy, made by his black-operations boys and actually poisoned), there is no point in calling him a liar; you may not know for some time whether poisoned candy has been dropped or not. If the enemy commander has shown his troops photographs of prisoners whom your side has taken and "murdered" (according to his well staged photos), it is not a good idea to ask people to surrender without sending along equally convincing pictures of well cared for prisoners. If the enemy alleges that you and your allies are rioting in the streets or stealing each other's womenfolk, or that one of you is doing all the fighting while the other sits around in safe staging areas, it may be a good idea to send along some leaflets showing inter-allied cooperation on your side, or to run a few radio shows on the subject.

This consists merely of reckoning the enemy propaganda as part of the psychological warfare situation, and of using the enemy as part of the background to your own advantage. The moment you start letting him take the initiative, your propaganda wags along behind his. Tell *his* people something *he* can't deny. Let him sit up nights worrying about how he will counteract *you*. Make him drive his security officers crazy trying to release figures that will please your G-2 in order to reassure his home audience. Really good propaganda does not worry about counterpropaganda. It never assumes that the enemy propagandist is a gentleman: he is by definition a liar. Your listeners and you are the only gentlemen left on earth.

CHAPTER 5

Psychological Warfare in World War I

World War I saw psychological warfare transformed from an incidental to a major military instrument, and later it was even called the weapon which won the war. The story spread, since the Germans liked to imagine that they had been talked out of winning, and since ex-propagandists among the Allies enjoyed thinking that their own cleverness had been decisive when even the tremendous violence of trench warfare had produced nothing more than a stalemate. If psychological warfare is considered in the broad sense, it seems plain that it was among the decisive weapons of 1914-1918. The political decency of the Allies, the appeal of President Wilson's Fourteen Points, the patent obsolescence of the Kaiser and what he stood for, the resurgence of Polish, Baltic, Finnish, Czechoslovak and South Slav nationalisms—all these played a real part in making Germany surrender in 1918. More real than the role of guns, men, ships, planes, tanks? This cannot be answered: it is like asking of a long-distance runner whether his heart, lungs, legs, or head contributed most to his success. Since war is waged by and against all parts of the human personality—physical condition, skills, intelligence, emotions, and so on—it is impossible to distinguish between the performance of one kind of weapon and the other in the attainment of a goal itself complex—governmental surrender. Only a weapon which left no enemy survivors could claim for itself undisputed primacy in victory.

Propaganda came to prominence in war because the nations involved had made mass-communications part of their civilian lives. The appearance of huge newspapers, systematic advertising, calculated political publicity, and opinion manipulation in other forms made it inevitable that

skills which developed in civilian life should be transferred to the military. In general, *the psychological warfare efforts of each belligerent were the direct equivalent of his peacetime nonpolitical propaganda facilities*. (By way of exception, the peculiar genius of the Bolshevik leaders stimulated a propaganda effort disproportionate to the facilities, either of personnel or matériel, to be found in pre-1914 Russia.)

Nations rarely change their basic character in time of war. When war starts it is usually too late to re-educate generations already grown up, teach them wholly new skills, or develop administrative or operational procedures unknown in peacetime life. Sometimes, by great effort, a nation can transform a small available cadre into large, new and effective units on the political, military, economic or social fronts. Even then, the character of the war effort will be colored and influenced by the experience of the men undertaking it. The British had, in 1914, one of the world's finest news systems, a highly sophisticated press, and extensive experience in international communication for technical and commercial purposes, notably the undersea cable system, and they turned these to war use with considerable smoothness. The Germans had a far more regimented press and a more limited network of commercial and technical connections. The British, furthermore, had a diplomatic and consular service of superb quality; comparable German services included a much higher proportion of bunglers and enthusiasts.

From the very beginning the British had the lead. They nailed German propaganda as propaganda, while circulating their own as news, cultural relations, or literature. The Germans who boasted that they were a "cultured" people had their naïveté rewarded when the British let the German word *Kultur* become a synonym for boorish pedantic arrogance. The Germans had the awful habit of putting many of their own unattractive emotions into words, and the

even more ruinous habit of then printing the words. In many instances, the British simply let the Germans think up braggadocio or vengeful phrases, then circulated the German phrases to the world. The English language was permanently enriched by some of these: *strafe* comes from the German plea that God "strafe" (punish) England. The actual "Hymn of Hate" was originally a song made up by Germans for Germans. The word "Hun" was applied to the German Army by Kaiser Wilhelm himself, and so on. Furthermore, the Germans created in their press and information services a condition of bureaucratic snafu which has rarely been excelled in any war. National character certainly worked out its automatic vengeance in World War I.

The American psychological warfare effort of 1917-1919 also drew heavily on familiar skills: the American press, second only to that of the British at the time; the church, Y.M.C.A., and Chautauqua groups; and the wealth of private clubs which flourish under our liberal system of laws and usages. Other nationalities made efforts similarly in keeping with their peacetime facilities. The Japanese were adroit, but even at that time confused by the mix-up of trying to be a "civilized" power but simultaneously expansionist. The French showed high professional skill in adapting their military and diplomatic personnel to propaganda tasks. France's position as battleground ensured her of the rage of her own people and the sympathy of neutrals, giving propaganda from Paris a hearing. The Chinese, though undergoing the downfall of the Yüan Shih-k'ai dictatorship and lapsing into chaos, maintained an impeccable diplomatic front and played a weak hand for everything it was worth; they had their private quasi-war with the Japanese in 1915. That they did so while putting the blame for Allied disunity squarely on the Japanese where it belonged is to their credit.

The weight of the propaganda war, as of the material war, fell on its prime contestants, Britain, Germany, and the United States. The private and revolutionary groups which emerged as the revolutionary governments played a vigorous part because they had few other functions to distract their attention. The Republic of Czechoslovakia got its start in Pittsburgh, Pennsylvania, in 1918, and fought psychological warfare from the instant it took form; not till later did it assume the weightier and more expensive responsibilities of ruling and warring.

The British Effort.

In World War I, the British made most of the mistakes and learned most of the lessons which the Americans were to make and to learn in World War II. The British Foreign Office formed a War Propaganda Bureau in 1914, but a great deal of the effort was done by private facilities (patriotic associations) or by lower political and military echelons of the government and armed forces—and without coordination. Things became so confused that at the mid-point of the war, the British organized a Department of Information with Colonel John Buchan at its head. (Buchan will be remembered by all adventure-lovers as author of *The Thirty-nine Steps*, *The Courts of the Morning*, and other first-class thrillers; he was also made a peer under the style, Lord Tweedsmuir, and became a popular Governor-General of Canada.) Buchan did not always get along with the committee which floated above him, telling him how to run his business.

The British, like the Germans, had immense organizational difficulties. The British ended up by inventing a distinction of roles. Thus they finished World War I with two separate propaganda agencies. The Ministry of Information, under Lord Beaverbrook, with Colonel Buchan as Director of

Intelligence, carried on civilian psychological warfare outside Britain; the National War Aims Committee carried on civilian psychological warfare within Britain. Military psychological warfare was carried on by military and civilian agencies, both. The British required five years of honest effort, bitter wrangling, and positive political invention in order to devise a psychological warfare system sufficient to meet the needs of a great power at war. They did not let their administrative difficulties prevent their conduct of correct, poised and highly moral propaganda, nor impede their use of plentiful funds and high ingenuity in getting their propaganda across.²²

The British set the pace in coordinating political warfare with news-propaganda, and in effecting workable liaison between national policy-makers and operational and public-relations chiefs of the armed services. It is not likely that, even in World War II, the Americans—within the looser, younger, bigger framework of our more compendious government—achieved as good results in terms of timing. State-War-Navy-OWI-OSS-Treasury timing of related events or news items was obtained through most of World War II in the following manner: the federal agency affected did whatever it was going to do anyhow, and other federal agencies took notice after the event, initiating their related actions, if any were feasible, then and only then. The British sought to get around this in World War I by correlating their policy toward various countries with their policy involving different departments. They were not totally successful but they learned a lot; the net product of their propaganda was, for most of its purposes, superb.

The German Failure In Propaganda.

German writers, after World War I, sometimes attributed the superiority of the British in propaganda to the innate

fiendishness of Britishers as contrasted with the gullible purity of Germans. The psychoneurotic non-com who made himself famous to the world's cost did not make this mistake. In *Mein Kampf* Hitler stated categorically that the British had understood the professional touch in propaganda while the Germans had not. Hitler's contempt for the masses was shown in his explicit statement of their inattentiveness, their poor response to formal logic, their affirmative reaction to simple one-sided reiteration. He said: "[In England] ... propaganda was a weapon of the first class, while with us it was a sop to unemployed politicians...." German nationalists of whatever stripe found themselves in accord when they blamed their military defeat on the enemy's use of propaganda. They thus succeeded in maintaining the myth, already sedulously inculcated for two centuries, that the German army could not be beaten in the field. The extremists and crackpots among them went on to develop the "stab-in-the-back" theory that an unbeaten Germany was betrayed from within by Jews, socialists, and democratic people. (The mutually exclusive alternatives—namely that either Allied propaganda was fiendishly good, and the Germans merely innocent victims, or else that Allied propaganda was ineffectual and the anti-war sentiment a purely German development—did not keep the Hitlerites from exploiting both alibis simultaneously.)

The postwar period of the 1920's saw, therefore, the curious spectacle of the Germans lauding American psychological warfare, and counting it as a major factor of defeat, while the Americans naturally emphasized the fighting record of American troops.

As for Kaiserist propaganda, it started out with the twin curses of amateurishness and bureaucracy, each of them crippling but deadly when paired. German writers and scholars ran wild in 1914 and 1915 in trying to put the blame on the Allies; amateurish in public relations, they

succeeded in arousing a tremendous amount of antagonism. They were handicapped by the ponderosity of the German Imperial Government, by the intervention of persons unfamiliar with news or advertising (at that time the most obvious sources of civilian propaganda personnel), and by a military stodginess which made German press communiqués infuriating even to anti-British readers. Overseas propaganda developed through poorly secured clandestine channels, and was mixed up with espionage and sabotage personnel. Inescapable "breaks" gave all German agents a bad name. George Sylvester Viereck, who has enjoyed the odd distinction of being our most vocal pro-German sympathizer in both wars with Germany, later wrote a naïve but revealing account of his operations under the title *Spreading Germs of Hate* (Boston, 1930). (No British information officer was guilty, even after the war, of a comparable breach of taste.) Viereck praises the British for their sang-froid and skill; coming from him, the praise is more than deserved.

More seriously, German propaganda lacked both organization and moral drive. Lieutenant Colonel Nicolai, the Imperial German General Staff officer responsible, puts part of the blame on the German press and on the press officers of the Army and the Reich: "In fact, the enemy remained virtually untouched by any kind of German propaganda. This reproach falls against the press, it would seem, as well as on the responsible officials.... Internationally minded papers themselves failed to cooperate. Yet it was precisely these which were circulated and esteemed abroad. Newspapers with other (pro-militarist) editorial policies, failing to get leadership from the Government, could not aim at any unified effect.... Instead, the goal of the governmental press leadership remained a thoroughly negative one: to prevent the press from doing harm to national policy."²³

Without developing his theme into systematic doctrine for psychological warfare, the German colonel stated the basic defect of World War I from the German point of view. Writing in 1920, he went on to say: "The enemy alleges simply to have copied our front-line propaganda when he initiated his. In so doing, he is guilty of a deliberate untruth, made for the sake of removing the moral blot which is attached to his victory...." Nicolai could not overcome the supposition that propaganda was a dirty and unsoldierly device and that it was much more honorable for armies to exchange loss of life than to save men on both sides by talking the enemy into surrendering, but he went on to the real point at issue. "Furthermore, it was not moralistic misgivings which kept us from applying to the enemy front lines a propaganda campaign as successful as theirs, but very sober practical obstacles. There were available to us none of the (psychological) points of attack at which propaganda would have been effective against the enemy forces, points such as the enemy found in our own domestic conditions. What was lacking was political propaganda as precursor of military."

What the Germans failed to learn in World War I, they later learned and applied in World War II. The German Imperial Government started in 1914 with a defiant assurance of its own power. Power was not sought among the masses so far as Kaiser Wilhelm was concerned; one inherited it from one's ancestors, along with an army, and the masses had better keep their noses out of it. The Hitlerite German government of 1939 began its world war only after two decades of shrewd, conscienceless, bitter domestic propaganda. Hitlerism had come to power by first wooing and then bullying the common man, and the Nazi chiefs, in their strategy of terror or "warfare psychologically waged," subsequently applied the same tactics to the international community. Hitler conquered Europe with these tactics; he

started with flattery, made scenes, and ended with cold brutality. These were the skills of the urban slum.

The Creel Committee.

The fabulous American propaganda, of which the Germans expressed such dread, was the work of two agencies. The civilian agency was the Committee on Public Information, universally known as the "Creel Committee" after its chairman, Mr. George Creel. The military agency was the Propaganda Section (or Psychologic Section), G-2D, General Headquarters, American Expeditionary Forces, under Captain Heber Blankenhorn.

The Creel Committee had the superlative advantage of possessing a chief who enjoyed the confidence of the President and whose participation in national policy was on a high enough level to give propaganda coordination to other governmental policies on a basis of equality. Creel himself considered the task to be one of advertising, and he organized his Committee with extreme looseness, expanding it rapidly. Although his total gross budget for the war was only a fraction of OWI's budgets in World War II, he systematized most of the publicity activities then available.

News services were maintained by means of a news bureau in Washington that fed material to the commercial press and processed other material to publicity missions abroad. Heavy emphasis was placed on the home audience for Creel's mission covered all phases of propaganda work. Sections were set up for posters, advertising, "Four Minute Men" (volunteer local speakers in all American communities), films, American minority groups and the foreign-language press, women's organizations, information bureaus, syndicated features, and cartoons. The young but already large American motion picture industry was made a

channel whereby American propaganda movies went to both the United States and overseas audiences. In one instance Creel got the American producers to threaten Swiss exhibitors with a boycott unless they showed American propaganda film along with the features.

Missions were sent to France, England, Italy, Switzerland, Holland, Spain, Scandinavia, Mexico and other Latin American countries, China, and Russia. It was not considered necessary to send American propagandists to Japan in World War I. The Japanese were given the American propaganda file and were asked to use it; they said they would.

The Creel Committee was run in simple, almost chaotic fashion. Agencies proliferated whenever a new idea turned up. The basic concept was that of domestic American agitation, as practiced commercially through advertising and socially through the civic clubs. The war propaganda left a rather bad taste in the mouth of many Americans, and the boisterous joviality of the arousers probably produced negative attitudes which encouraged pacifism and isolationism in the postwar years. The purely technical side of the work was done well, but at the terrible cost of overshooting national commitments.

America emerged from the war disappointed at home and discredited abroad—so far as the heated propaganda of "making the world safe for democracy" was concerned. A more modest more calculated national propaganda effort would have helped forestall those attitudes which, in turn, made World War II possible. Creel and his fellow-workers did not remember that beyond every war there lies a peace, in its own way as grim and difficult as war. They did not understand that no war is the last war, that leeway must be left for propaganda to be effective *again*. They said that

World War I would be the last of all wars; perhaps they believed it themselves.

General Pershing's Headquarters.

The civilians of the Creel committee patronizingly claimed to have helped the G-2 men at A.E.F. Headquarters run psychological warfare. In the official history of Captain Blankenhorn's group, which centered from the very beginning on leaflet production, there is little reference to outside aid. Radio did not exist as a means of mass communication, and loudspeakers then surpassed an ordinary megaphone very little, if at all; hence communication with the enemy had to be through print. Leaflets were basic.

The Americans at A.E.F. concentrated on morale and surrender leaflets. They did work that was superb from the point of view of common-sense psychology. They used British and French experience in applying techniques of leaflet distribution, making inventions and improvements of their own. Balloons and airplanes were the chief methods for air distribution; the plane-borne leaflet bomb was a development of World War II. Extensive improvements were made in the procedures of leaflet distribution by means of mortars.

The morale leaflets used the anti-militarist, pro-democratic sentiments of the world at that time. The autocracy and inefficiency of the German government provided an excellent target. Since propaganda against the upper classes was not yet regarded as a Communist monopoly, considerable appeal was introduced for the common German soldier against his generals, nobles, officials, and capitalists. German nationalism was attacked by means of sectional appeals to Lorrainers and Bavarians.

The news that America was in fact producing vast weapons, that the American army was truly in Europe, that the German retreats were really serious—these were used in morale form (see below, page [212](#)) rather than as spot-news leaflets.

It was in the primary mission of combat propaganda—the inducement to surrender—that the Americans excelled themselves. They produced limitless appeals (see [Figure 13](#)) promising the Germans first-class American food when they surrendered. Emphasis was indeed on all surrender themes—good food, human care, privileges under international law, patriotic value of remaining alive, opportunity to return to loved ones, and so forth. But the Americans went over these variously, and came back to the topic of food. For an army of hungry men who knew that their homeland starved behind them, the enumeration of things to eat had obsessive value.

Haughty and incompetent, the German high command tried to counteract Allied leaflets—particularly the American leaflets—by the use of appeals to "disregard propaganda." While the German armies plainly backed down toward defeat, such German statements preached about the situation. They did not put the common soldier's plight in concrete terms. They did not say, "You will be unemployed, poor, sick, dishonored, lonely, if you surrender. Your wife will be beaten by Frenchmen, your daughters raped by savages, your father and mother starved to death by the food prices." Such tactics had to wait for a later war. In 1918, the German command, senile and fussy, pointed out that enemy leaflets were propaganda (nasty! nasty!) and that good German soldiers would remember their duty. For men who probably imagined they could smell white bread baking, bacon frying, and coffee cooking across the lines, such wordage was nonsense. The Germans came on over to surrender.

The Bolshevik and Chinese Revolutions.

The dynamic propaganda development of this period came about in Russia. The Russian revolution began as reaction to an adverse military situation, disesteemed leadership, economic hardship, and long overdue reforms. In its first, or constitutional phase, it had an inevitableness about it; there was little resistance to the revolution, and the popular mood was one of relief, joy, easement. However, the majority group of the Russian Socialists interpreted the Marxist philosophy to mean (putting it bluntly) that the end is justified by the means. They believed that they had developed a system of politico-economic forecasting which, while not always certain, was close to certain. And they further believed that no one else, lacking this system of forecasting, could lead the workers and peasants to their historically inevitable freedom. This philosophy may sound beside the point, but it is not. Such abstruse doctrines of Hegelianism and Marxism were used by the majority-Socialists (known by their Russian name, *Bolshevik*) to give themselves a sense of unconditional rightness. From the first phase of the revolution on, the Bolsheviks pitilessly sabotaged all other democratic groups. There was no point in helping other groups, when Bolsheviks alone had the inner secrets of history at their command.

In the geniuses Lenin and Trotzky, the Bolshevik movement found its leadership. Lenin had no use for democracy as it was known in America. To him it was a sham, a front for the great capitalist trusts, which—even though the capitalists themselves might not know it—were doomed to get bigger on a shrinking market, until international capitalist war, bankruptcy, and working-class revolution was the result. Lenin was as sure that this would happen as he was that the sun would rise the next morning. The only dispute was the matter of timing; a few Bolshevik

pessimists thought that the capitalist world might last into the 1920's.

Such a frame of mind led to a very deadly kind of psychological warfare. The Bolsheviks despised their opponents, desiring to "liquidate" them (this meant breaking down a group and preventing its reforming as a group, but came above all to mean mass murder). They were so antagonistic to the "capitalist" world that they hated God, patriotism, national history, churches, money, private property, chastity, marriage, and verse that rhymed, all with equal intensity. Moscow became the Mecca for the eccentrics and malcontents of the world and for some years Russia was in fact looser in morals than any other civilized country.

Hatred for the capitalist world enabled the Bolsheviks to throw Russian Czarist patriotism into the discard. They delighted in getting Russian troops to desert at the front; the Germans delighted in this, too. But the Bolsheviks were certain they would have the last laugh because they knew it was only a matter of weeks or months before the revolution—the *inevitable* revolution, forecast by Karl Marx's peculiar economics—broke out in Germany as well. The Russian devil-may-care attitude toward all established forms of society was perfectly characterized by Trotzky's flip but deadly answer to the German military negotiators at the Brest-Litovsk negotiations. When the Germans balked at some point, "All right," said Trotzky, "no war and—no peace."

The Germans insisted that if the Bolsheviks did not sign the dictated peace terms the German army would make more war.

Fine, said Trotzky in effect, he didn't mind. Go ahead and make war. It wouldn't worry him or his army. They would go

somewhere else and would refuse to play games with capitalists.

This stopped the Germans in their tracks. They did not want to send their troops into a starving country that roared with subversive doctrines. They knew that while Trotzky wasted their time quibbling over negotiations, his printing presses worked night and day telling the German troops that the war was over, that capitalism was on its way out, that the workers' revolution was coming, everywhere, for everybody, with food, peace, plenty, atheism and all the other delights of the good Bolshevik life. The Russians finally signed the surrender treaty but in point of fact, the German divisions on the Eastern front were contaminated by Bolshevism, and when they came back across Germany they brought the message of freedom and peace with them. Germany did have an abortive Communist revolution—partly because of Russian operations—though it was stopped by an alliance of the moderate Socialists and the dependable remnants of the army.

The Russians went on merrily through a living hell. For five more years the Bolshevik leaders held their country together with wretched industrial production, poor food, bad weapons. They had amazingly high morale among their own select Bolshevik group, and against the common people they had two weapons, propaganda and terror. (The terror was symptomatic of the first of the modern totalitarian dictatorships; its domestic police role is not a part of psychological warfare.)

The Bolshevik propaganda was probably the finest propaganda effort ever known in history down to that time—down, perhaps, all the way to our own time. The political limit was beyond reach; anything in the old world was fair game. Things the sober Soviet citizen of 1946 would regard with veneration were open to ridicule in 1919-1922:

patriotism, religion, national sovereignty, international law, treaties with or between capitalist states. There flowed from Russia a world-wide stream of propaganda, mostly clandestine, some of it overt. In every nation of the world there was, to a greater or less degree, a "Red scare"; the propaganda of the Bolsheviks was regarded as having mystical subversive powers which no other operation could match. In retrospect it seems absurd that anyone could have worried about the Americans of the 1920's revolting against their own Constitution; but a lot of people, including the Attorney General of the United States, did indeed worry.

They had cause for alarm though not for the reasons they supposed. Much of the magic of Bolshevik propaganda arose from its taking up where British, French and American propaganda left off. The psychological warfare of the Allies had made the sad mistake of promising a new, a better world to everyone on earth. When the war ended, and conditions went back to normal, many people in the world did not consider "normalcy" the fulfillment of that better world. The Bolshevik propaganda reaped the harvest which the Allied propagandist had sown and then left untended. Expectations, whipped up beyond normal, turned to Bolshevism when the Western democracies abandoned both domestic and foreign propaganda operations. The strategic advantage of Bolshevik propaganda was overwhelming. The Allies had gotten the world ready for it, so that the wild Utopia of the Leninists temporarily made sense to millions.

This does not mean that the Bolshevik propaganda of the 1920s was not good. It was good, technically, psychologically, politically—but good in terms of achieving an immediate scare at the cost of long-range confidence. The eventual cost to the Soviet Union was terrible. The Soviet government isolated itself and declared a condition of open psychological warfare against every other government on earth, including the United States. (This so

exasperated Presidents Wilson, Harding, Coolidge, and Hoover that they refused to recognize the Soviet Union.) The Bolshevik propaganda was carried by:

Russian government channels;

Communist "party" channels (the Communists not really being a political party, anywhere, but using the name "party" to designate the hierarchy of a dogmatic, ruthless and fanatical political religion);

trade unions;

individual subversive operators;

"cover organizations";

trade, consular and other official missions;

leaflets in the mails;

posters, books and other literature;

films;

radio.

The theme throughout was plain: the world revolution is coming, by inescapable economic laws discovered by our theory. The world revolution, which *will* come, will remove the *owning* classes from control of the productive capital, and will put all capital in the hands of the workers. "The expropriators will be expropriated." Thereupon the economic laws we have found in Marx's books will cease their bad influence and will guarantee world peace, world prosperity, happiness, human freedom. This is not an appeal (they said); this is *science*. This is *objective*. We *know*. Listen!

The Communists harped on these basic themes. They waged political warfare along with the psychological. Every attempt of the non-Communist countries to discuss the situation was termed "conspiracies of the warmongers." The

word "democratic" was reserved to the Communists or to non-Communists who were certain to cause Communism no trouble. The Communists invented an entirely new vocabulary, which the Soviet and other Communist papers still use, with meanings that have the same emotional value (plus-value, or, "that's *good!*") as in America or Britain, but which have entirely different meanings in concrete practice. "Democracy" means "free elections"; "free elections" mean that the people elect "democratic leaders"; but "democratic leaders" are not the people who are elected in non-Communist countries. Non-Communist leaders are usually dubbed "tools" or "stooges" of something; they are "servile" or "reactionary." Real "democratic leaders" are only those people approved by the international Communist movement. It *knows*. By *science*.

What was the net effect of such psychological warfare? In the first place, much use of common terms without regard to ultimate fulfillment means that Communist propaganda is self-defeating. It can succeed only in situations of desperation, anarchy, or terror. That is satisfactory to the Communist leaders, because they think their *science* tells them that the capitalist states will lead to desperation, anarchy and terror anyhow. Secondly, Communist propaganda sacrifices all other values to the propaganda. One has to be a religious fanatic (of the Marxist sort) to turn it out; one has to be ready for a totally new creed in order to keep on accepting it. International understanding, patriotism, truthfulness, freedom of action, artistic conscience—all these are sacrificed to propaganda. In the end, *everything is propaganda* to the Communist. Nothing which hurts Communism can be true. They have their *science*. (If you would like to look at this fabulous *science*, read *The Communist Manifesto*, V. I. Lenin's *The Teachings of Karl Marx*, and Stalin's latest current compilation of speeches. You will be impressed by the crazy logic, the

genuine but ill-informed zeal.) Third and most important, Communist psychological warfare is continuous. The themes may change—sometimes provocative, sometimes almost conciliatory—but the machinery, the operation, does not. Communist propaganda is therefore seasoned and professional, dependent on a powerful police-state at home and on uneducated or emotionally ill fanatics abroad, except for those few countries where Communism is so stable as to attract hard-headed or practical idealistic men.

This Bolshevik success, rather than the splendid but short-lasting accomplishments of the Allies in World War I, kept psychological warfare on the map. Modern Communism is permanent psychological warfare in action.

The Communist leaders unwittingly made a tremendous mistake between 1922 and 1927. They invited the military and political staff of the Chinese Nationalists (Kuomintang) to cooperate with them. Filled with their own Communist sense of certainty, it never occurred to them that anyone else could outsmart them. The Chinese did. Their military chief of mission in Moscow learned everything that the Communists had to teach about irregular fighting, subversive propaganda, revolutionary situations, mass agitation. He then went home and got more Communist aid to carry out the military phase of the Nationalist revolution, which started under way in the summer of 1922. The old war-lord armies were helpless in the face of agents, agitators, poster crews, student strikes, press propaganda and indoctrinated troops. The most sensational war in modern Asia involved relatively little combat. The Nationalist leader used all the Communist psychological warfare techniques, and added a few more of his own. His name was Chiang Kai-shek.

In 1927 the Communists began a debate in Moscow as to whether they had used the Nationalists enough or not. One

group said they might as well liquidate the Nationalists, Sunyatsenism, Chiang Kai-shek and all; the other said they should use the Nationalists a little longer, to carry on the struggle against American, Japanese, and British "imperialism." Chiang Kai-shek displayed a keen interest in these formal theoretical discussions which, thanks to his Moscow training, he understood perfectly. While the Communists were still debating when and how to hijack him, he hijacked them. In the fall of 1927, he turned against them, using the weapons of terror and propaganda, and then shifting to the more solid ground of economic development. They have not forgiven him. Nationalist China to this day possesses a working duplicate of the Moscow propaganda facilities which the Communists, unconscious of the humor of it, call "fascist." (What is anti-Communist for whatever cause *is* Fascist, they say.)

The Russian revolution of 1917-1922 and the Chinese revolution of 1922-1927 represent the situations created by Communist psychological warfare. Since that time, except for Spain, Communist psychological warfare has failed in every single attempt to come to power outside Russia. Following World War II, Communist psychological warfare proved itself capable of holding countries only *after* the military force had occupied or won them. The magic has gone out of Communist propaganda; it can keep control only with heavy military pressure behind it. But in the far past, it has been capable of winning—as in Russia and China—without outside military aid. With a renovation of techniques, doctrines, and personnel, it may do so again.

CHAPTER 6

Psychological Warfare in World War II

Bolshevik accomplishments in psychological warfare were often regarded as part of the peculiar mischief of Marxism, not as techniques which could be learned and used by other people. Similarly, the history-making sweep of the Chinese Nationalist armies northward in 1922-1927 was considered to be specially and incomprehensibly Chinese; possible lessons which might have been learned from Chinese Communist psychological warfare were left unheeded by officials and students in the West. Meanwhile Germany, the greatest power of Europe, had been fighting bitter internal psychological warfare battles²⁴ which looked like heated internal politics. Not until Adolf Hitler assumed the Reich's Chancellorship and began using his Brown-shirt methods for foreign affairs did other people wake up to the existence and application of the new weapon.

(The War College files, for example, show that not one single officer was assigned full-time to study of these problems during 1925-1935. For the entire period 1919-1929, there are listed only two War College research papers on the subject. Yet the American Army was far from negligent. It was an excellent army, though crippled by outright poverty of personnel and materials. The Army was simply American, and like the rest of America for a while took the world for granted.)

The National Socialist German Workers' Party, as Hitler called his movement, was a conglomerate built up around a few determined fanatics. The Nazis do not appear to have believed their own doctrines to anything like the degree to which the Communists believed theirs. From the first, the Nazis regarded propaganda very consciously as a new, fierce instrument which led to the accomplishment of *modern* power. The Communists had proclaimed that democracy was a fake; the Nazis agreed. The Communists had shown that a minority with a sacred mission of its own invention could get mass support for a government that

claimed to be *for* the people, even though it was obviously not by the people nor *of* them. The Nazis took this as a model. The Communists had shown that a modern man-god could be set up and worshipped in a twentieth-century state, and called leader (*Vozhd* in Russian). The Nazis elevated the Soviet practice all the way into a principle, the principle of the leader (*Führer* in German).

The Communists had shown that an organization calling itself a *party*, actually a quasi-religious hierarchy with strong internal discipline, definite membership, and active organizational components, could control fifty times its own membership. The Nazis organized the same general sort of party, copying the Italian Fascists in part, but copying more from the direct example of the German Communists right in front of them. The Communists had shown that such a movement needed to have youth branches, women's organizations, labor sections, clubs of its own, and so on, calling this "mass organization." The Nazis copied this too.

The machinery of Naziism was in many ways a copy of Communism, applied to allegedly different ends, (the Nazis had an Aryan myth; the Communists had their pseudo-economics). But the important thing about them both was the destruction of the *end* by the *means*; the problem of getting and keeping power despite the people was so obsessive that propaganda became all-important. Theoretically, the *end* (to the Nazi, German world rule; to the Communist, the fulfillment of history in universal communism) was the most important thing. But since any means at any time which led to that end was good, and since the Party bosses were the sole ones who could determine whether a particular action led to the very remote end or not, the outcome in both Russia and Germany became the conscienceless seeking of power for its own sake.

The new psychological warfare, a cause as well as a means of World War II, arose from the subjection of other considerations to *propaganda*. The propaganda addict takes everything with a ton of salt; what he does believe is lost in what he doesn't believe. The ordinary controls of civilized life—regard for truth, regard for law, respect for neighbors, obedience to good manners, love of God—cease to operate effectively, because the propaganda-dizzy man sees in everything its propaganda content and nothing else. Everything, from a girl dancing on a stage to an ecclesiastic officiating in a cathedral, is either *for* him or *against* him. Nothing is innocent; nothing is pleasurable; everything is connected with his diseased apprehension of power. Before he gets power, he hates the people who have power; he does not trust their intelligence, esteem their personalities, believe in their good will, or credit their motives.²⁵ They must be scum, because they hold power when *he*, the propaganda-infatuated man, is a member of the group that *should* hold it. Yet when such a man comes to power he hates his colleagues and comrades. Remembering the cold cynical way in which he himself sought power, knowing that his brother fanatics have the same ruthless arrogance, the propaganda-using Party man cannot trust anyone. Blood purges, mass trials, liquidations, removal of families, concealment of crimes—all these result from the establishment of propaganda in an overdeveloped role.

It is against such people that we—ordinary folk, Americans—dared wage psychological warfare during World War II. Propaganda had grown into ideology; the world was convulsed with monstrous new religions. For instance: the greatest journalist of the Soviet Union, Karl Radek, was placed on trial for treason. He was asked by the prosecutor, Vyshinsky,

"These actions of yours were deliberate?"

Radek answered: "Apart from sleeping, I have never in my life committed any undeliberate actions."²⁶

This answer sums up the mood of the totalitarian who is obsessed by propaganda. He comes to believe that all activity, whether his own or of other people, has meaning. He had developed the sense of responsibility that made him violate tenets which Americans, in a free society, regard as fundamental to human nature: things like self-respect, kindness, love of family, pity for the unfortunate.

This kind of mentality was found chiefly in the National Socialist and Communist states, and to a lesser degree in dictatorships such as Italy; by contrast, reactionary Japan was almost democratic. This mentality makes it possible for the ruler to control his own people enough to undertake "warfare psychologically waged." Without domestic fanaticism and domestic terror, governments have to fall back on "psychological warfare"—that is, the mere supplementing of politics and military operations by propaganda. It is vain to expect a free people in a free country to submit to such humiliating control, even for the purpose of winning a war. What made the psychological warfare of World War II peculiar was the fact that our enemies fought one kind of war ("warfare psychologically waged," or total war) and we fought them back with another. Theoretically, it is possible to argue that we had no business succeeding.

But we did succeed.

The Pre-Belligerent Stages.

The propaganda-conscious Axis states had first to control their own people enough to wage aggressive war. They then had to split their possible enemies, to make piecemeal victory possible. They had to stay on good terms with the

Soviet Union (Hitler till 1941; Japan till the last week of war). They had to frighten their immediate enemies while assuring their eventual enemies. This called for a great deal of propaganda.

Pre-belligerent operations required extensive use of "black" propaganda. Since their political systems aroused hostility and anger in audiences which they wished to address, the aggressors sought to disguise their propaganda. They used pacifist groups to keep the democracies from rearming. Militarist groups were encouraged to keep the democracies from undertaking domestic reforms or discussing military matters with Russia. Financial groups were contacted to preserve the fiction of normal international relations. Cultural groups were employed to preserve friendliness for their respective nationalities as such. The Japanese did a little global propaganda and for a while subsidized several magazines in this country, but in general they concentrated their main effort in the immediate area of their military operations.

It was the Germans who developed world-wide pre-belligerent propaganda to a fine art. They exploited every possible disunity which could contribute to the weakness of an enemy. They were not choosy about collaborators. If the Communist Party of the United States lent a hand (as it did between September, 1939 and June, 1941, terming the war "an imperialist war"; after Russia got in, the war was called "the democratic anti-fascist war"), the Nazis did not object. They willingly listened to men who had fantastic schemes for world peace and later used such men as aids in getting appeasement. They tried to rouse Catholics against Communists, Communists against democrats, Gentiles against Jews, whites against negroes, the poor against the rich, the rich against the poor, British against Americans, Americans against British—anyone against anyone, as long as it delayed action against Germany and weakened the

enemy potential. They went to special pains to organize German-speaking minorities in non-German countries, but they never neglected using people who had no open connection with Naziism at all.

This work was performed, so far as the open propaganda itself was concerned, through the instrumentalities of the Reich's Ministry for Propaganda and Popular Enlightenment under control of that malignant intelligence, Paul Josef Göbbels. The broader program was not solely a publicity matter, and was operated chiefly through Party channels. The German capacity to learn was demonstrated by the contrast between World War I and World War II. In World War I the Germans lacked political motifs, professionalism, and coordination; in World War II they had all of these.

German Accomplishments.

Three basic propaganda accomplishments were achieved by the Germans. First, in the political warfare field, they succeeded in making large sections of world opinion believe that the world's future was a choice between Communism and Fascism. Since they and the Communists agreed on this the point seemed well taken. Actually, there is no historical or economic justification for supposing that those two forms of dictatorship constitute a real choice in the first place, or that the civilized and truly free countries need ever depart from their ancient freedoms in the second place.

Second, in the strategic field, they made each victim seem the last. There was still hope that war would not arise, even while the Spanish Republic was being strangled before the eyes of the world. The British hoped that they could stay out even after Czechoslovakia fell. Astute though the Russians were, they hoped to stay out even after Britain and France fought. And as late as December 6, 1941 many

Americans still believed that the United States would avoid war. This suited the Nazis' book; take them on one at a time.

Thirdly, in the purely psychological field the Germans used outright fright. They made their own people afraid of Communist liquidations. They brazenly showed movies of their blitzkriegs to the governing groups of prospective victims, just to lower morale. When one nation is really ready to fight, and the other knows it, the nation that doesn't want to fight can be reduced to something resembling a nervous breakdown by constant uncertainty. (The author was in Chungking during the summer of 1940, when the German propaganda agent, Wolf Schenke, showed these German movies to the Chinese leaders. The author asked for an invitation and did not get it; it was for Chinese only, said Schenke. But the Chinese were not awed, or made fearful of the power of Japan's ally. They simply said, "Nice movie ... that's the kind of thing we used to do in the Ch'in dynasty," and let it go at that.)

The British-German Radio War.

With the outbreak of war the British and Germans found radio at hand. Neither had to change broadcasting policies a great deal. Each could reach almost all of Europe on standard-wave; each could jam the other's wave lengths, never with complete success, and the struggle centered around a contest for attention. Who could get the most attention? Who could get the most credence? Who could affect the beliefs, emotions, loyalties of friendly, neutral, and enemy listeners the most?

Figure 14: Radio Program Leaflet, Anzio, 1944. These leaflets were dropped by the Germans on American troops at Anzio in April 1944. They show an interesting tie-in between two forms of propaganda. The counterpropaganda to the British Broadcasting Corporation is slight; chief emphasis is on entertainment value of the German radio programs. (From photograph taken by Signal Corps and released through War Department Bureau of Public Relations.)

The Germans showed evidence of real planning. Their public relations facilities were perfectly geared to their propaganda facilities. When the Germans wanted to build the British up for a let-down, they withheld military news favorable to themselves. During the fight for Norway, they even spread rumors of British successes, knowing that if British morale went up for a day or two, it would come down all the harder when authentic bad news came through the War Office. When the Germans wanted to turn on a war of nerves, their controlled press screamed against the victim; when they turned it off their press was silent. The Germans thus had the advantage of not needing to make much distinction between news, publicity, and propaganda. All three served the same purpose, the immediate needs of the Reich.

AMERICAN SOLDIERS! Remember those happy days when you stepped out with your best girl "going places and doing things"? <i>No matter</i> whether you two were enjoying a nice juicy steak at some tony restaurant or watching a thrilling movie with your favourite stars performing, or dancing to the hit of a swing band <i>you were happy</i> WHAT IS LEFT OF ALL THIS? Nothing! Nothing but days and nights of the heaviest fighting and for many of you MORNING BUT A PLAIN WOODEN CROSS IN FOREIGN SOIL!	FILL IN THIS BLANK AND KEEP IT USE BLOCK LETTERS TO BE TRANSMITTED BY JERRY'S FRONT RADIO: Name: _____ Rank: _____ Serial Number: _____ Address: _____ Street _____ Zone: _____ Country: _____ In this space write a short message of not more than 10 words which will be transmitted by radio.
---	--

Figure 15: Radio Leaflet Surrender Form, Anzio, 1944. Willingness of prisoners to surrender sometimes involves speedy communication of their names to their families, as in the preceding illustrations. At other times, prisoners are very unwilling to be identified and want their faces masked. This leaflet combines radio program announcements with the standard surrender pass.

The Germans put on the following types of news propaganda:

- (1) Official OKW (*Oberkommando der Wehrmacht*, or *Wehrmacht* HQ) communiqués. (These rarely departed from the truth, though they naturally gave favorable situations in detail and unfavorable ones scantily.)
- (2) Official government releases, marked by considerable dignity, possessing more political content than the military communiqués.
- (3) News of the world, part of it repeated from the British radio, part plain non-controversial news (for stuffing), and part (the most important part) news of genuine curiosity value to the listeners but which, at the same time, had the propaganda effect of damaging belief in the Allied cause.
- (4) Feature items, comparable to feature articles in newspapers, which tried to concentrate on a single topic

or theme.

- (5) Recognized commentators, speaking openly and officially.
- (6) Pseudonymous commentators, pretending to speak from a viewpoint different from that of the German Government, but who were announced as being broadcast over the official German radio system. (Of these the British traitor William Joyce, since hanged, known as "Lord Haw Haw," was the most notorious. His colleagues were the American traitors Fred Kaltenbach and Douglas Chandler. At the end of the war Chandler was tried in Boston and sentenced to life imprisonment but Kaltenbach fell into Soviet custody and died.)
- (7) Falsified stations, which pretended to have nothing at all to do with Germany. (The "New British Broadcasting Company" transmitted defeatist propaganda with a superficial anti-German tone. Others took a strong Communist line and sought to build up opposition to the British government within England.)
- (8) Falsified quotations on the official German radio. (Sometimes it was easier to make up an imaginary foreign source, ostensibly quoted in the German program, rather than to set up a special fake program for the purpose.)
- (9) "Planted" news sources quoted on the German radio. (A great deal of the German news was culled out of Swedish, Spanish and other papers which were either secretly German-controlled or which—as in the case of the United States papers involved—were so sympathetic to Germany that they voluntarily printed German-inspired news which the Nazis could then quote from a "neutral" or "enemy" source.)

- (10) Open falsification of BBC (British Broadcasting Company, the official British agency) materials—at which the Germans were not necessarily caught by their ordinary listeners, but at which BBC caught them.
- (11) Ghost voices and ghost programs, transmitted on legitimate Allied wave lengths when the Allied transmitters went off the air, or else interrupting the Allied broadcasts by transmitting simultaneously.

Figure 16: Invitation to Treason. Another German leaflet, also from Anzio, combines the radio surrender-notice form with a political invitation to Britishers to commit treason. The Germans had a few British traitors in their "Legion of St. George," and a few American civilian renegades, but in general this line of appeal was useless. The last paragraph of the appeal is such naïve trickery that it probably aroused suspicion in the minds of the men it was supposed to persuade.

Of all these, it was soon found that the communiqués and government releases were the most important, although the bulk of the station time had to be diversified with other types of program. The Germans and British both found that radio was important as a starting point for news. It was more valuable to have the press (as in England) or rumor (as in Germany) pass along an item than it was to rely on the direct listeners. Each side sought to make opinion analyses of the enemy; some of the British studies were clever in technique. The radio propagandists had to ask

themselves *why* they made propaganda. It is simple to make mischief, spreading rumors or putting practical jokes into circulation. Such antics do not necessarily advance a military-political cause. Sustained psychological warfare required—as both British and German radio soon found out—a deliberate calculation of the particular enemy frame of mind to be cultivated over a long period of time. When radio stations had to broadcast day after day whether anything happened or not, it became difficult to continue to circulate news without faking it and losing the confidence of enemy listeners.

On the German side, the German radio had the forced attention of the entire world. As long as the Germans had the strategic initiative for field warfare, they were in a position to make news scoops whenever it suited them. The security policies of the Allies often gave the Germans a monopoly of news on a given operation. There was never any danger that the Germans were not listened in on; the danger the Nazi operators had to worry about was disbelief. Hence the Germans tried to keep a moderate tone in their news, tried to prepare between crises for the news that would become sensational during crises.

The Germans soon learned a basic principle of war radio. They learned not to permit radio to run ahead of their military capacities. At first, when their spokesmen promised attainment of a given goal by a given time, and the army failed to live up to the schedule, the British radio picked up the unfulfilled promise and dangled it before the world as proof that the Germans were weakening. The Germans thereupon effected Army-radio liaison so that the radio people could promise only those things which the army was reasonably sure of delivering. (When Allied propaganda analysis woke up to this fact, it added one more source of corroboratory intelligence to be checked. (See page [126](#).)

The British had their hands full getting news out in the languages of the occupied countries. It was immensely difficult for them to follow the politics of the underground. German counterespionage, under the deadly *Sicherheitsdienst*, made it difficult to keep track of opinion in the occupied countries. Work against Naziism depended on the temper of the people; propaganda against collaborators had to distinguish between outright evil collaborators and those public officials who stayed on out of a sense of mistaken or necessary duty. The British did not necessarily announce themselves at any time as anti-Communist, and collaborated for short-range purposes with Communists all over the Continent. Mr. Churchill himself shifted his North Balkan political support from Mikhailovich to Broz-Tito. But it was vitally necessary to know just how and when to change support from one group to the other. Since the undergrounds had very few radio transmitters, and none of these was reliable during most of the war, the British faced the task of providing radio facilities for all of the occupied countries. The consequence was to make their radio warfare highly sensitive to politics; they had to address the right people with the right language at the right time, on penalty of failure.

wished. Furthermore, the British were usually scrupulous in yielding to America's primary interest in areas they felt to be American problems—Japan, China, the Philippines. They were least cooperative when the OWI tried to spread the ideals of Mr. Henry Wallace in Burma or to explain the CIO-PAC to the Hindus.

No clear victor emerged from the Anglo-German radio war; the victory of the United Nations gave the British the last say. In the opinion of many, the British were one war ahead of the United States. They had profited by their World War I experience, and by their two years' operational lead which they had on the Americans. But side-by-side with the Germans, it is harder to appraise their net achievements. The British had immense political advantages; the resentment of a conquered continent worked for them. But they had disadvantages too. The enemy worked from the starting point of a fanatical and revolutionary philosophy; the British had the tedious old world to offer. The postwar interrogations of civilians in Germany showed that an amazingly high proportion of them had heard BBC broadcasts, and that many of the ideas and attitudes which the British propagandized were actually transmitted to the enemy. On the British side, it is almost impossible to find any surviving traces of the effect of Nazi propaganda. Had the war been purely a radio war this test might be conclusive. But if psychological warfare supplements combat, combat certainly supplements propaganda. The great British and American air raids over Europe unquestionably created an intense interest in British and American plans and purposes.

It is historically interesting to note that the Germans went on fighting psychological warfare even after the death of Hitler and the surrender of the jury-rigged government of Grossadmiral Karl Doenitz, which functioned 6-23 May 1945 at Flensburg under Allied toleration. This resulted from the

inability of the 21st Army Group swiftly to initiate information control. The Flensburg radio, still under Nazi direction, emphasized Anglo-American differences with the Soviet Union in every possible way short of direct appeals. German naval radio also carried on propaganda for a while, using topics such as the sportsmanship of the German surrender, the hatred of the German Navy for atrocities committed by the Nazis, and the usefulness of the phantom government to the Western Allies.

Black Propaganda.

Subversive operations formed a major part of the Nazi pre-belligerent effort. The Germans planted or converted quislings wherever they could, and when they failed to have time to prearrange stooges they converted them rapidly after arrival. (A major cause of the German defeat is to be found in the fantastic political policies followed in the Ukraine and neighboring Soviet Socialist Republics. In these areas, despite the Soviet boast that Russia had no fifth columnists within her borders, the Germans found thousands of helpers. The Nazis organized a large army (General Vlassov's Russian Army of Liberation) out of Soviet prisoners, and these troops were usable and docile. But in the political warfare field the Germans were too cocksure. They let their men go wild in orgies of cruelty against the local population; the economic system went entirely to pieces. The natives then became convinced that the worst possible conditions of Sovietism were infinitely better than the best that Naziism could offer.)

These subversive groups were formed by political means. Propaganda aid was offered to such an extent that it was often difficult to tell how much of the quisling movement was spontaneously native, and how much mere cover for a purely German operation.

In the latter phase of the European war, the Russian Communists followed the German Nazi example of having tame natives ready to take over the government of occupied areas. In Poland, the so-called Lublin Committee took over the government from the constitutional Polish Government-in-exile at London. In Yugoslavia, the Russian-trained propagandist, Tito, seized the leadership from the recognized Minister of War, Draja Mikhailovich, after the British and American governments had shifted their support to him; later Mikhailovich was put to death. The Russian army brought along to Germany a considerable number of German Communists. In Czechoslovakia the strength of the constitutional regime was such as to compel the pro-Russians to allow the prewar leadership a precarious toehold in the new government. The same cadres of sympathetic persons who had been useful as propaganda sources for psychological warfare during the period of hostilities became useful instruments of domination after hostilities ended. The British and Americans, with their belief that government should spring from the liberated and defeated peoples, did not prepare and equip comparable groups to rival the Communist candidates; only in Italy and Greece did the friends of the Western Allies stay in power, and then only because they were the nearest equivalent of *de jure* authorities. In the Scandinavian and Low Countries the national leadership reemerged without prodding or interference by the Western Allies; they passed from the sphere of psychological warfare (that is, of being someone's cover) to that of world politics.

Specific black propaganda operations were of considerable value. However, black propaganda is more difficult to appraise than overt propaganda. Analytical and historical studies, gauging the results obtained by Black operations in relation to their cost, are not yet available.

(Certain particular operations are described later in this book, pages [208](#) and [237](#).)

American Operations: OWI and OSS.

Long after the outbreak of war in the Far East, and even after the coming of full war in Europe, neither the civilian nor military portions of the American government possessed propaganda facilities. This is not as serious as it may sound, for the United States is lucky in possessing a people well agreed on most fundamentals. The commercial press, radio, magazine, and book publishing facilities of the country for the most part expressed a national point of view without being prodded. (The isolationist issue never brought in the question of America's basic character.) Before the war, and even after the government entered the field, private American news and publishing continued to engage in operations which had the effect if not the intention of propaganda. OWI at its most vigorous could scarcely have reached the audience that had been built up by the *Time-Life-Fortune* group, not to mention the *Reader's Digest*, both of which became truly global in coverage during the war years. American movies already had a world-wide audience. The propaganda turned out unwittingly by such agencies may not have had the gloss and political smoothness of Dr. Paul Josef Göbbels best productions, but it had something no government propaganda had—the possession of a readership all of which was unmistakably voluntary, obtained by the appeal of authentic interest and entertainment—and proved by an ability to charm money out of people's pockets.

The American problem of propaganda was thus not a simple one. Total psychological warfare was out of reach if we were to remain a free people. Otherwise the simple-seeming thing to have done would have been to put a

government supervisor in every newspaper, radio station and magazine in the country, and coordinate the whole bunch of them together in the national interest. Simple-seeming. Actually, such an attempt would have been utter madness, touching off a furious political fight within the country and meeting legal obstacles which would have remained insurmountable as long as there was a Constitution with courts to enforce it. The simplest official action which the United States could take was therefore hedged about by the presence of private competitors who would watch it enviously, jealous of their established rights and privileges, and by the operational interference which vigorous private media would have on public media.

The then Mr. or Colonel, later General, William Donovan had tasted the delights of political warfare when President Roosevelt sent him to Belgrade to talk the Serbs into fighting instead of surrendering. He was successful; the Serbs fought. He came back to the United States with a practical knowledge of what political warfare could do if qualified personnel operated on the spot. The outbreak of the Russo-German war lent urgency to American action in the political-intelligence field as well as in the propaganda field. On 11 July, 1941 President Roosevelt issued an order appointing Colonel Donovan as Coordinator of Information. The agency became known by the initials COI.²⁷

The primary mission of COI was the collection of information and its processing for immediate use. Large numbers of experts were brought into its Research and Analysis Branch, designed to do for the United States in weeks what the research facilities of the Germans and Japanese had done for them over a matter of years. The inflow of material was tremendous and the gearing of scholarship to the war effort produced large quantities of political, sociological, geographic, economic and other monographs, most of them carefully classified SECRET, even

when they were copied out of books in the Library of Congress. However, it was not the research wing of the COI that entered the broadcasting field.

Radio work was first done by an agency within COI called FIS—Foreign Information Service. In the few months before Pearl Harbor the group became organized in New York under the leadership of Robert Sherwood, the dramatist, and got a start in supplying the radio companies with material. The radio scripts were poorly checked; there was chaos in the matter of policy; little policing was possible, and the output reflected the enthusiasm of whatever individual happened to be near the microphone. Colonel Donovan had moved into this work without written and exclusive authorization from the White House; hence there followed a lamentable interval of almost two years' internal struggle between American agencies—a struggle not really settled until the summer of 1943, well into the second year of war. The occasion for struggle arose from lack of uniform day-to-day propaganda policy and from an unclear division of authority between the operating agencies. But the work was done.

Radio operations had to be coordinated with strategy on the one hand and foreign policy on the other, and we sought to develop methods for doing this. It is significant that all the major difficulties of American psychological warfare were administrative and not operational. There was never any serious trouble about getting the facilities, the writers, the translators, the telecommunications technicians. What caused trouble were problems of personality and personal power, resulting chiefly from the lack of any consensus on the method or organization of propaganda administration.

Military Intelligence Division had created an extremely secret psychological warfare office at about the time that the COI was established; this had broad intelligence and policy functions, but no operational facilities. It was headed

by Lieutenant Colonel Percy Black, who began auspiciously by putting Dr. Edwin Guthrie in office as his senior psychological adviser. This ultra-quiet office was called Special Study Group; it and the COI developed very loose cooperative relations, consisting chiefly of SSG making suggestions to COI which COI might or might not use as it saw fit. Meanwhile, the Rockefeller Office was conducting independent broadcasts to Latin America; the Office of Facts and Figures was dispensing domestic information; and at the height of the psychological warfare campaigning, there were at least nine unrelated agencies in Washington, all directly connected with psychological warfare, and none actually subject to the control of any of the others.²⁸

Chart I (Source: The author's observations.)

A year of wrangling produced the solution, after a Joint Psychological Warfare Committee had been set up under the Joint Chiefs of Staff, and had failed to fulfill an effective policy-supervising function. On 13 June, 1942 the President created the Office of War Information. This agency was given control directly or indirectly over all domestic propaganda, and over white propaganda abroad, except for the Western Hemisphere, which remained under the Rockefeller Committee in the State Department. The FIS was taken from the COI, and the COI took on the new name of OSS—Office of Strategic Services—under which it retained three major functions:

- (1) continuation of scholastic and informal intelligence;
- (2) black propaganda operations (given *explicit* authority only in March, 1943);
- (3) subversive operations, in collaboration with regular military authority.

The OWI was placed under Mr. Elmer Davis, a Rhodes scholar and novelist who had become one of the nation's most popular radio commentators. The FIS was perpetuated under the control of Mr. Robert Sherwood, who had a most extraordinary coterie of odd personalities assisting him: Socialist refugees, advertising men, psychologists, psychoanalysts (of both the licensed and lay varieties), professional promoters, theatrical types, German professors, a commercial attaché, young men just out of college, oil executives, and popular authors (novelists, slick writers, Pulitzer winners, pulp writers, humorists, poets and a professional pro-Japanese writer, fresh off the Imperial Japanese Embassy payroll).

The War Department agency, under the Military Intelligence Service of G-2, had been renamed Psychological Warfare Branch and had executed within the G-2 structure the equivalent of a knight's move in chess, ending up at a new place on the TO with no observable change in function or authority; it had passed under the authority of Colonel (later Brigadier General) Oscar Solbert, a West Pointer with wide international and business experience; he had been out of the Army as a top official with Eastman Kodak, after a cosmopolitan army career which sent him all over Europe and gave him one tour of duty as a White House aide. With the establishment of OWI, Colonel Solbert's office fissiparated like an amoeba; the civilian half of Psychological Warfare Branch, with a few officers, went over to OWI to be a brain-trust for the foreign broadcast experts, who failed to

welcome this accession of talent; the military half remained as an MIS agency until 31 December, 1943, when OWI abolished its half and MIS cooperated by wiping out the other, leaving the War Department in the middle of a war with no official psychological warfare agency whatever, merely some liaison officers. Psychological warfare became the responsibility of designated individual officers in OPD—the Operations Division of the General Staff), an outfit celebrated for conscientious overwork, as well as in MIS and the War Department got along very nicely. Meanwhile OWI and OSS fought one of the many battles of Washington, each seeking control of foreign propaganda. The D.C. and Manhattan newspapers ran columns on this fight, along with news of the fighting in Russia, Libya, and the Pacific. For one glorious moment of OSS, it seemed that the President had signed over all foreign propaganda functions conducted outside the United States to OSS, cutting the OWI out of everything except its New York and San Francisco transmitters; the OWI was stricken with gloom and collective indigestion. The next day, the mistake was rectified, and OWI triumphantly planned raids on the jurisdiction of OSS. Meanwhile, the following things were happening:

Highly classified plans for psychological warfare were being drafted for both the Joint and Combined Chiefs of Staff. These were discussed at various meetings and then classified a little higher, whereupon they were locked up, lest the propaganda writers and broadcasters see them and break security on them by obeying and applying them.

Broadcasts—thousands of words in dozens of languages—were transmitted to everyone on earth. They were written by persons who had little if any contact with Federal policy, and none with the military establishment, except for formal security. The plans at the top bore no observable relation to the operations at the bottom.

Chart II (Source: Bureau of the Budget: *The United States at War*, Washington, 1947, p. 225.)

Figure 18: Anti-Exhibit Leaflet. In the China Theater, we heard that the Japanese had organized a big exhibit in Canton, showing the starved and apathetic population some pieces of shot-down planes as demonstration of defeat of American air power. We made up this leaflet quickly, and dropped it on the city while the exhibit was still in progress. (China, 1944.)

When Washington agencies wanted to find out what the broadcasts really were saying, the actual working offices at

New York and San Francisco, their feelings hurt at not having been consulted by the Joint Chiefs, refused (on *their* security ground) to let anyone see a word of what they were sending out. This baffled other Washington agencies a great deal. (The author, who was then detailed from the War Department to OWI, outflanked this move in one instance by getting a report on a San Francisco Japanese Broadcast from the Navy Department. It had been monitored by an American submarine out in the Pacific.)

Large overseas offices were set up at various foreign locations. Some of these went down to work quickly, efficiently, smoothly, and did a first-class job of presenting wartime America to foreign peoples; others, with the frailties of jerry-built government agencies, lapsed into inefficiency, wild goose chases, or internal quarrels.

Lastly, the poor British officials continued to wander around Washington, looking for their American opposite numbers in the propaganda field—looking for one and always finding a dozen.

That was in 1942-1943.

By 1945, this had all become transformed into a large, well run, well integrated organization. Three weeks before Japan fell, the OWI finally prepared an official index of its propaganda "Directives"—that, is, of the official statement of what kinds of propaganda to make, what kinds not to make. The overseas units had been associated with the metropolitan short-wave. Personnel had been disciplined. Techniques had become more precise. Under the command of Lieutenant Commander Alexander Leighton, an M.D. who was also a psychiatrist and anthropologist, careful techniques were devised for the analysis of Japanese and German morale. Comparable though dissimilar work on Europe had been done by a staff associated with Harold Lasswell. The propaganda expert Leonard W. Doob had been

appointed controlling and certifying officer for every single order of importance.

The military relationship had been clarified. The War Department, acting through G-2, had reestablished a psychological warfare office under the new name of Propaganda Branch, under the successive commands of Lieutenant Colonel John B. Stanley, Lieutenant Colonel Bruce Buttles, and Colonel Dana W. Johnston. The new branch undertook no operations whatever, but connected War Department with OWI and OSS for policy and liaison, and represented one-half of the Joint Chiefs of Staff (an appropriate naval officer from a comparable office representing the other half) at the weekly policy meetings of OWI. Military needs in psychological warfare had been settled by regarding the Theaters in this respect as autonomous, and leaving to the respective Theater Commanders the definition of their relationships with OWI and OSS, and their use of each. OSS and OWI had passed the stage of rival growth, and consulted one another enough to prevent operational interference. Each had sufficient military or naval supervision to prevent interference with cryptographic security, communication and deception operations.

The Lessons.

The major job of psychological warfare passed to the Theaters. In some theaters this was kept by the commander directly under his own immediate supervision, and OWI was used simply as a propaganda service of supply. In others, OWI was an almost independent agent. In some places, OWI worked with OSS as in the European Theater, in others independently, as in the China-Burma-India Theater. In one, it worked completely without OSS (SWPA), since General MacArthur did not let OSS into his Theater at all. (OSS got in

the general area anyhow; with Navy permission, it turned up blithely, highly nautical on Saipan.) These Theater establishments were the ones that set up local standard-wave programs which the enemy could hear in volume. They provided the loudspeaker units which were taken right into combat. They serviced the ground and air combat echelons with leaflets as needed. They moved along behind the advances, opening up information booths and explaining to liberated natives why each did not get the four freedoms, the three meals a day, and the new pair of shoes he thought he had been promised by the American radio.

These military establishments are better described under operations, since it was their functioning which defined—down to the limit of present-day experience—American military doctrine concerning the conduct of psychological warfare in theaters of war. In concluding the historical summary of psychological warfare, it is interesting to look at three major points which emerge plainly from the experience of World War II—points which either were not discovered in World War I, or else failed to make an impact on the minds of the responsible officials and informed citizens.

The first of these is simple. It became almost a litany with Colonel Oscar Solbert, when he sought to indoctrinate civilian geniuses with military proprieties: *Psychological warfare is a function of command*. If command chooses to exercise it, it will succeed. If command neglects it, or if it is operated independently of military command, it will either interfere with the conduct of war proper, or it will be wasted. It took us two bitter years to learn this lesson. Political warfare cannot be waged without direct access to the White House and the Department of State; field operations cannot be conducted unless they meet at some common staff point with field command. No one can succeed in improvising alleged policy and presenting that policy as United States

policy, and get away with it. Sooner or later actual policy catches up with him. In the field, no civilian can write leaflets for air or ground distribution unless he has some idea of when, where, why, and how they will be used.

The second lesson of World War II, set forth by Colonel Solbert and Dr. Edwin Guthrie was simply this: *Atrocity propaganda begets atrocity*. Everyone knows that war is cruel, sad, shameful to the soul of man; everyone knows that it hurts, degrades, injures the human body; everyone knows that it is not pleasant to undergo, nor even to look at. If any particular war is worth fighting, it is worth fighting for some reason other than the crazily obvious one—the fact that it is already war. It is a poor statesman or general who cannot give his troops and people an inspiring statement of their own side in war. Atrocity propaganda reacts against war in general; meanwhile, it goads the enemy into committing more atrocities. The anti-atrocity rule was not lifted in World War II (save for one or two notable exceptions, such as President Roosevelt's delayed announcement of the Japanese having executed the Doolittle flyers) except for the specific purpose of preventing some atrocity that seemed about to occur in a known situation from actually occurring. Atrocity propaganda heats up the imagination of troops, makes them more liable to nervous or psychoneurotic strain. It increases the chances of one's own side committing atrocities in revenge for the ones alleged or reported. Furthermore, atrocity propaganda scares the enemy out of surrendering, and gives the enemy command an easier responsibility in persuading their troops to fight with last-ditch desperation.

The third lesson was equally simple: *America does not normally produce psychological warfare personnel in peacetime, and if such personnel are to be needed again, they will have to be trained especially and in advance.*

Qualifications for Psychological Warfare.

Effective psychological warfare requires the combination of four skills in a single individual:

- (1) An effective working knowledge of U.S. government administration and policy, so that the purposes and plans of the government may be correctly interpreted.
- (2) An effective knowledge of correct military and naval procedure and of staff operations, together with enough understanding of the arts of warfare, whether naval or military, to adjust propaganda utterance to military situations and to practical propaganda operations in forms which will dovetail.
- (3) Professional knowledge of the media of information, or of at least one of them (book-publishing, magazines, newspapers, radio, advertising in its various branches), or of some closely related field (practical political canvassing, visual or adult education, etc.).
- (4) Intimate, professional-level understanding of a given area (Italy, Japan, New Guinea, Kwangtung, Algeria), based on first-hand acquaintance, knowledge of the language, traditions, history, practical politics, and customs.

On top of these, there may be a possible fifth skill to make the individual perfect:

- (5) Professional scientific understanding of psychology, anthropology, sociology, history, political science, or a comparable field.

The man who steps up and says that he meets all five of these qualifications is a liar, a genius, or both.

There is no perfect psychological warrior.

However—and the qualification is important—each psychological warfare team represents a composite of these skills. Some members have two or three to start with, the others virtually none. But all of the personnel, except for men with peculiarly specialized jobs (ordnance experts; cryptographers; translators; calligraphers), end up with a professionalism that blends these together. They may not meet professional standards as officials-officers-journalists-Japanologists-psychoanalysts when they return from psychological warfare operations against the Japanese, but they have met men who are one or more of these, and have picked up the rudiments of each skill—enough, at least, to suspect what they do not know.

The advertising man or newspaperman (skill 3) who goes into psychological warfare must learn something of the enemy, neutral or friendly groups whom he addresses (skill 4), something of United States civilian government procedures (skill 1), something of military or naval organization and operations (skill 2) and ideally something of psychology or sociology or economics, depending on the topic of his work (skill 5).

Figure 19: *Propaganda Against Propaganda*. As an occasional stunt, propaganda is directed against propaganda. Hitler did so in his book, *Mein Kampf*. The leaflet, shown in the original and in facsimile, was used by the Allies on the Germans in the West. A German leaflet, addressed to their own troops ("defensive propaganda"), was picked up, X'd out, copied, and refuted.

The psychological soldier deals with enemy troops in their *civilian* capacity; he addresses them as *men*, he appeals to their non-military characteristics in most instances, and he does not follow sportsmanship, as men did in other wars, by helping the enemy command maintain discipline. Furthermore, the soldier works with writers, illustrators, translators, script-writers, announcers and others whose skills are primarily civilian, and he takes his policy cues from the civilian authority at the top of the war effort. An infantry colonel does not have to worry about what the Secretary of State is saying, if the colonel is on the field of battle. But an officer detailed to psychological warfare must remain attuned to civilian life even if he has seen no one out of khaki for two months straight.

Personnel was probably the biggest field problem of the entire war. Should psychological warfare be needed again, it will take careful culling of personnel to obtain the necessary

staff and operators. The continuation of psychological warfare techniques, in part at least, by both civilian and military agencies in time of peace will, it may be hoped, provide the U.S. with a cadre for the next time. Very little of the living experience of the Creel Committee was carried over into OWI. Walter Lippmann, who had worked with both Creel and Blankenhorn, was not a participant. Carl Crow, the advertising man and writer from Shanghai, worked on China for the Creel Committee in World War I and on China again for OWI in World War II. He was exceptional, and took no major part in setting up indoctrination. One of the OWI executives in 1946, shortly after his return to civilian life, read James Mock and Cedric Larson's account of the Creel Committee, *Words That Won the War* (Princeton, 1939); his interest was avid. When he finished, he said,

"Good Lord, those people made the same mistakes we made!"

He had forgotten that the Creel Committee record had been available all the way through.

Effects of American Operations.

The net effects of the work of civilian-operated propaganda are hard to appraise because the radio broadcasts and leaflets for civilians were designed to have a long-range effect on the enemy. Statistical computations come to nothing. It would appear likely that some parts of our psychological warfare actually lengthened the war and made it more difficult to win. The "unconditional surrender" formula, the publicity given to proposals for the pastoralization of Germany, the emphasis on Japanese savagery with its implied threat of counter-savagery were not overlooked by the enemy authorities. It is certain that other parts of our psychological warfare speeded up the end

of the war, saved lives, increased the war effort which was enormous when measured in terms of the expenditure of manpower, matériel and time involved.

Figure 20: Re-Use of Enemy Propaganda. Leaflets sometimes develop an enemy pictorial or slogan theme and use it effectively against the original disseminators. Employing the colors and insignia of the U.S. Air Force, this Nazi leaflet for Frenchmen makes no attempt to minimize American bombing to the French. Instead, it uses the Allied heading, "The hour of liberation will ring...." Then it adds the grim point, "Make your will, make your will."

One operation alone probably repaid the entire cost of OWI throughout the war. The Japanese offered to surrender, but with conditions. We responded, rejecting the conditions. The Japanese government pondered its reply, but while it pondered, B-29s carried leaflets to all parts of Japan, giving the text of the Japanese official offer to surrender. This act alone would have made it almost impossibly difficult for the Japanese government to whip its people back into frenzy for suicidal prolongation of war. The Japanese texts were checked between Washington and Hawaii by radiophotograph and cryptotelephone; the plates were put into the presses at Saipan; the big planes took off, leaflets

properly loaded in the right kind of leaflet bombs. It took Americans three and a half years to reach that point, but we reached it. Nowhere else in history can there be found an instance of so many people being given so decisive a message, all at the same time, at the very dead-point between war and peace.

The Japanese had done their best against us, but their best was not enough. We got in the last word, and made sure it was the last.

Soviet Experience.

Soviet psychological warfare used Communist party facilities during World War II, turning them on and off as needed. But Soviet psychological war efforts were not characterized by blind reliance on past experience. They showed a very real inventiveness, and the political policies behind them were both far-sighted and far-reaching.

The Soviet government was the one government in the world which could be even more totalitarian than Nazi Germany. Many Americans may consider this a moral disadvantage, but in psychological warfare it has very heavy compensating advantages. The Soviet people were propaganda-conscious to an intense degree, but the authorities took no chances. Revolutionary Communist themes were brilliantly intermingled with patriotic Russian items. Army officers were given extraordinary privileges. Everyone was given epaulettes. The Communist revolutionary song, the famous *Internationale*, was discarded in favor of a new Soviet hymn. History was rewritten. The Czars were honored again. The Church was asked to pray for victory. The Soviet officials were able to tailor their social system to fit the propaganda. They did so, even to the name of the war. They call it the Great Patriotic

War. Outsiders may murmur, "What war is not?" But the Russian people liked it, and the regime used traditionalism and nationalism to cinch Communism in the Soviet Union.

In their combat propaganda the Russians were equally ruthless and realistic. They appealed to the memory of Frederick the Great of Prussia, they reminded the Germans of Bismarck's warning not to commit their forces in the East, they appealed to the German Junker caste against the unprofessional Nazi scum who were ruining the German army, and they used every propaganda trick that had ever been heard of. They turned prisoners into a real military asset by employing them in propaganda, and talked a whole staff of Nazi generals into the Free Germany movement.

Only in radio did the Russians retain some of their old revolutionary fire with its irritating qualities for non-Communist peoples. This was explicable in terms of the audience. The Russians could keep their domestic propaganda half-secret by imposing a censorship ban on those parts of it, or those comments on it, which they did not wish known to Communists abroad. The censorship was a permanent institution, in war and out, and therefore did not impose special difficulty. They could keep their front-line propaganda quiet, since they did not allow their Allies to send military observers up front, and the Nazis could be counted on not to tell the world about effective anti-Nazi propaganda. But their radio propaganda had to be audible to everyone. Hence the radio propaganda was the least ingenious in using reactionary themes effectively. The Russians and Germans both used black radio, but since each policed the home audience rigorously against the other, it is possible that the efforts cancelled out.

Japanese Developments.

The Japanese invented little in psychological warfare. They made excellent and judicious use of news to the American audience. They actually got much more official Japanese news into the American press during the war years than they had succeeded in placing during peacetime, when they had offices in American cities. They did so by maintaining the regular Domei news service in English-language Morse wireless for the American press, ready-edited for the newspaper offices. They put by-lines on the stories and it is said they sometimes even told the American newspapers: "Please hold until nine AM Eastern War Time. Thank You. Domei." In dealing with Asiatic audiences, special Japanese *butai* did a great deal of black propaganda along with subversive operations, but they displayed little initiative as to the use of basic techniques. Their chief merits were industry, patience, and the delivery of a first-class news service.

Chinese Uses.

The Chinese Communist forces broke all records for certain specialized aspects of combat propaganda. Japanese prisoners were given cordial welcome, better food than they had in the Army, the company of maidens, rich gifts, and political indoctrination about the freedom of Japan. These soldiers then went with the Chinese Communists back to the front lines and talked Japanese sentries out of their strong-points. The Yen-an forces went to great pains with this propaganda, and even "elected" a Japanese prisoner to the City Council of Yen-an. The author talked with the Political Director of the Chinese Communist authority at Yen-an, and with some of the Japanese in Communist China. There was evidence of a real understanding of the problems of the Japanese common soldier, and of real sympathy with him, which the Japanese enlisted men were quick to feel. The Communists went so far as to throw gift packages into the Japanese lines—not booby-traps, just nice gifts with the polite request for a reply. They learned the names of Japanese field telephone operators, and then spliced into the line and argued politics with them in a rough and jolly way. When they had enough prisoners they kept the most promising converts for political training. They fed the ordinary prisoners well, entertained them royally, and sent them back to their own lines with the suggestion that the Chinese Communists would appreciate it if their good Japanese brethren would in combat please shoot their rifles in the air, thus making sure of not hitting Communists while at the same time avoiding unnecessary trouble with the Japanese officers.

Under "Chiang the Chairman," the Chinese national government waged a dignified, humane kind of psychological warfare against Japan. Few people remember an odd chapter

out of modern history, the Chinese bombardment of Nagasaki, although it is possible that Asiatic historians of the future will make a substantial contrast between the Chinese who struck the first blow at that city and the Americans who struck the last. Shortly after the outbreak of the full quasi-war between China and Japan in 1937, the Generalissimo ordered his bombers to attack Japan. American-built Chinese bombers appeared over Kyushu, the first invaders to show up since the shoguns repelled Kublai Khan 656 years earlier. But instead of dropping bombs, they dropped leaflets denouncing aggression and inferentially pointing out that while the Japanese were uncivilized enough to bomb their fellow-Asiatics, the Chinese were too civilized to undertake reprisals in kind.

The Generalissimo's troops also had fraternization and front-line propaganda, but not to the extent to which the Chinese Communists did. The Generalissimo himself followed a very liberal (not in the Leftist but the true sense) political line toward Japan. He uttered no threat of vengeance. He was the first leader of a great nation to say that the Japanese Emperor question was to be settled by letting the Japanese themselves choose their own form of government after the war was all over. He had Japanese on his political staffs—democratic persons whom his officials encouraged—and regular Japanese broadcasts were kept up throughout the war on the Chungking radio.

PART TWO

ANALYSIS, INTELLIGENCE, AND ESTIMATE OF THE SITUATION

CHAPTER 7

Propaganda Analysis

Opinion analysis pertains to what people think; propaganda analysis deals with what somebody is trying to make them think. Each form of analysis is a new and flourishing field in civilian social research; the bibliographies of Smith, Lasswell and Casey, and the current reviews in the *Public Opinion Quarterly*²⁹ demonstrate the existence of a large and growing literature on the subject. Each year, new textbooks in the field or current revisions of old ones can be counted on to bring scholastic and scientific findings up to date.

Technical writings on visual education, religious conversion, labor organization, practical politics, revolutionary agitation, and on commercial advertising have frequent bearing on propaganda analysis.

Propaganda cannot be analyzed in a logical vacuum. Every step in the operation is intensely practical. There is nothing timeless about it, other than that common sense which is based on the nature of man. The ancient Chinese three-character classic, from which several billion Chinese have tried to learn to read, says:

Jên chih ch'u
Hsing pên shan;

*Hsing hsiang chin,
Hsi hsiang yüan.*

Freely translated, this means, "When people are born, they all start *good*, but even though they all start out about the same, you ought to see them after they have had time to become different from one another by picking up habits here and there!"³⁰ The common nature of man may be at the basis of all propaganda and politics, but incentives to action are found in the stimuli of varied everyday environments. Certain very elementary appeals can be made *almost* without reference to the personal everyday background ("cultural-historical milieu") of the person addressed. Yet in a matter as simple as staying alive or not staying alive—in which it might be supposed that all human beings would have the same basic response—the difference between Japanese and Americans was found to be basic when it came to surrender. To Japanese soldiers, the verbal distinction between *surrender* and *cease honorable resistance* was as important as the difference between life and death. The Japanese would not survive at the cost of their honor, but if their honor were satisfied, they willingly gave up.

Propaganda is directed to the subtle niceties of thought by which people maintain their personal orientation in an unstable interpersonal world. Propaganda must use the language of the mother, the schoolteacher, the lover, the bully, the policeman, the actor, the ecclesiastic, the buddy, the newspaperman, all of them in turn. And propaganda analysis, in weighing and evaluating propaganda, must be even more discriminating in determining whether the propaganda is apt to hit its mark or not.

Monitoring.

The first requisite of propaganda analysis is materials to be analyzed. In time of peace, it is usually enough to send a subscription to the newspaper, magazine, or pamphlet series, and to buy the books as they come out. Poster propaganda is more difficult to obtain, and frequently requires on-the-spot contacts. Dr. David Rowe brought back from Occupied China, in the early days of the Sino-Japanese war, a spectacularly well done and interesting series of Japanese and quisling posters. They were not hard to come by, once he was there, but he had to go about twenty thousand miles to get them and return.

In obtaining printed propaganda, better results will be achieved if the same sources are followed consistently over a period of time than if one triumphant raid is carried through. The choice may look like this (see [Chart III](#)). If, in this instance the propaganda analysis is to be a one-man enterprise in a small country or area in time of peace, the one man can collect all the different kinds of samples in March and can then spend several months trying to see how they add up. By the time his analysis is ready, it will be badly dated and will necessarily be less interesting to the recipients than would a report which was up-to-the-week. Furthermore, unless the analyst knows the area very well indeed, he will risk mistaking transient issues for basic ones. If the Old Agrarians happen to be accused of Right Wing Deviationism during the week of 3-10 March, the analyst may falsely conclude that the Old Agrarian issue is tempestuous or profound.

Unless he has a large staff, faces a special crisis or pursues a scholarly purpose, the analyst does well to pick the alternative illustrated in the vertical column. He should pick his media carefully, accepting the advice of people who know the area intimately. In an opinion-controlled area, it is wise to take both a direct government propaganda paper and an opposition of semi-independent paper, if such exist.

the propaganda has had by asking them about it (see interrogation, page [145](#)).

Printed Materials.

The most readily available sources of propaganda are not printed ones. Especially in time of hostilities, it may not be easy to subscribe to enemy materials by the process of sending an international postal money order. Delays involved in transmitting the printed materials may make them useless for spot analysis, and valuable only for long-range basic studies of morale. The propagandist who is being analyzed may oblige by reading large numbers of editorials on the radio. (During the last war, officers and citizens occasionally exploded with alarm when Radio Tokyo quoted a *Life* or New York *Times* editorial several hours after it appeared. They naturally supposed that the Japanese had a secret short-wave transmitter running from New York City direct to Tokyo, and overlooked the fact that the OWI may have quoted long excerpts in slow Morse code on its trans-Pacific beam to China. The Japanese had picked it up, used subquotes, and beamed it back.)

Printed matter goes on the air in any major news operation. It is only a matter of time before telephoto facilities develop in line with the experimental New York *Times* edition printed in San Francisco during the United Nations organizational conference. This was sent, all in one piece, by wirephoto to Frisco and reprinted. The delay between the two editions was merely a matter of minutes. In the future, wireless telephoto may reduce this to seconds, so that all belligerents can simply tune in on each other's major newspapers.

Radio.

For the present radio remains the biggest source of propaganda intake. Radio is convenient. It can be picked up illegitimately without too much fear of detection. For the cost per person reached, it is certainly the cheapest way of getting material to millions of people promptly. It lends itself to monitoring, and even standard (long) wavelengths can be picked up from surprisingly great distances.

The only defense against enemy use of radio monitoring or broadcasting consists of the application of wired radio—which means plugging all the radio sets in on the telephone circuit, putting nothing on the air, and defying the enemy to eavesdrop. If the radio sets are then policed, and are made incapable of receiving wireless material, that particular audience is effectively cut off from the enemy. (When the Red Army, with its acute propaganda-conscious security, moved into many Eastern European cities, the first thing it did was to round up all the radios which the Nazis had overlooked. This prevented the liberated peoples from being enslaved by the "filthy reactionary lies" of the American and British governments, and made sure that the peoples would stay liberated under influence of their local Soviet-controlled newspapers.)

Wired radio is expensive. Radio suppression is difficult; the successful concealers of radio receivers become two-legged newspapers and go around town spreading all the hot dope which the authorities are trying to suppress. Scarcity puts a premium on such news; rumor then becomes unmanageable. Except for strangely drastic situations, it is probable that the great powers will continue to tolerate radio reception even though it may mean letting foreign subversive propaganda slip in now and then.

It is therefore likely that radio broadcasts will be available for monitoring for the pre-belligerent stages of the next war, should war come again in our time, and that radio may last through a great part or all of the duration of the war. Factors

which cannot now be foreseen, such as radio control of weapons, will affect this.

Radio propaganda analysis follows the same considerations as those which govern choice of materials for analyzing printed matter. It is a surer method to follow one or two programs on a station than to make wide random selections. A standard-wave transmitter to the home audience comes closer to revealing the domestic scene than would a global rebroadcast of ostensibly identical material. Radio has a further advantage over print. Few nations print out separate propaganda for each foreign-language area, while almost every large and medium-sized country has international facilities for broadcast. Since the programs are beamed to different language groups, the senders automatically make up propaganda lines for each audience.³¹

Attentive monitoring can provide material for distinguishing the various lines which any given nation is sending out to its friends, neighbors, or rivals. Frequently the differences between these lines make good counterpropaganda. If you hear the Germans telling the Danes that all Nordics are supermen and all non-Nordics scum, while telling the Japanese that the National Socialist idea of the world transcends pluto-democratic race prejudice, put the two quotations together and send them back to the Danes and the Japanese both.

Radio, unlike print, cannot be held for the analyst's convenience. It is physically unhandy to try to file actual recordings of enemy broadcasts for preservation and reference. When the analysis center is large, as it would be if near the headquarters of a government or a theater of war, the difficulties of monitoring involve problems of stenographic and language help. The monitors themselves can then be stenographers, taking verbatim dictation. They write down the enemy broadcast word-for-word, either right off the air or from records. The editor then selects the most

important parts of the day's intake for mimeographic or other circulation. Important material can be put in a daily radio summary of enemy propaganda for the area monitored. The rest of it can be sent along by mail, put in files and classified (lest the enemy government find out what its own propagandists really were saying), preserved on the recording, or destroyed.

During World War II these basic verbatim reports played a very important part. The Foreign Broadcast Intelligence Service did the job for the United States, operating through the war years under the Federal Communications Commission. It has since been shifted from FCC to the War Department, and from the War Department to the Central Intelligence Group. Its materials sometimes are unclassified, although during most of the war they were marked *restricted*, and they are not available to the public except through microfilm copies of the Library of Congress file. These FBIS daily reports skimmed the cream off the enemy news broadcasts, and included editorial or feature material which might have intelligence or policy interest.

Monitoring by a Single Individual.

Where monitoring must be done by a single individual or a very small staff, it is desirable to find a basic news broadcast and to take it down verbatim where possible. This gives the analyst the chance of a second look at his materials and keeps him from having to make snap judgments of what is important and what is not, right during the course of the broadcast. Selection of a basic news program, followed by reference to speeches, plays, lectures and other programs that indicate the over-all tone of the day's output, will make it possible for one person to do an adequate monitoring job on about one-eighth of his full-time work per station. This does not leave him time to do much fancy analysis, or to

prepare graphs, but he can pass along the general psychological warfare situation so far as that particular beam on that particular transmitter is concerned.

The most likely situation for the isolated consul, businessman, officer, missionary, or amateur is one in which he can get a certain amount of stenographic help in taking down the broadcast material. The radio for monitoring varies in accordance with general reception conditions. Practically all the U. S. Army Signal Corps receivers will perform satisfactorily for local monitoring; so too will ordinary private sets, including the larger portables. An automobile radio can often be driven away from interference and from a hilltop or the edge of a lake can pick up a standard-wave station that cannot be distinguished on a much larger house set in the city. For transoceanic or world-wide reception, a short-wave receiver is of course necessary.

It is unwise to pick a sample that involves too much rapid speech, such as a foreign soap opera. The best reception is almost always the Morse code transmission of news or the slow dictation-speed reading of news from one central station to outlying news offices or substations. Selection of a program which usually comes in, arrangement for a verbatim copy of the program, daily checking of the news under standard analysis procedures—this gives a very fair cross-section.

One man sitting at Hankow could find out just what both the Generalissimo and the Chinese Communists were trying to tell the French-understanding and the Dutch-understanding listeners in the Far East. Another with pipe and slippers in Brussels could keep tab on the basic Russian lines to the Spanish-speaking world. Such monitoring obviously comes in handy for newspapers, commercial firms, governments, military establishments, speculators, and research institutions.

Identification: Propaganda vs. Truth.

The point will invariably arise: "This tells me how to listen to a foreign radio. Okay, I'll get the news, the lectures, the plays—all the rest of it. But so what? How am I going to know what's the truth and what's propaganda? How can I tell 'em apart? Tell me that!"

The answer is simple: "If you agree with it, it's truth. If you don't agree, it's propaganda. Pretend that it is all propaganda. See what happens on your analysis reports."

Propaganda was defined (at the beginning of this book) as follows: *Propaganda consists of the planned use of any form of communication designed to affect the minds and emotions of a given group for a specific purpose.* Taking a lesson from Communist theory, we can say that any form of mass-communication is operated for propaganda purposes *if no other motive for running it is evident.* Human beings talk; they like to talk. Much private talk is idle—but only an imbecile would talk over a radio network just for the pleasure of hearing himself talking. Propaganda is presentation for a purpose; it is the *purpose* that makes it propaganda, and not the truthfulness or untruthfulness of it.

The collected news of any modern country contains more truth each day than any one man could read in a lifetime. The reporters, editors, writers, announcers who collect truth not only collect it; they select it. They have to. Why do they select it? That is the propaganda question. If they select it to "affect the minds and emotions of a given group for a specific purpose," it is propaganda. If they report that a little girl fell out of bed and broke her neck—with the intent of frightening parents among their listeners into following the Safe Homes Week Campaign—that is propaganda. But if they report it because it is the only death in the community, and because they might as well fill up the

program, it is not propaganda. If you put the statement on the air, "An American negro workman in Greensboro, N. C., got eighty cents for a hard day's work last week," that can be presented and interpreted as:

- (a.) simple news, if there is something more to the story, about what the man said, or how he spent the eighty cents on corn meal to feed his pet tarantula;
- (b.) anti-capitalist propaganda, if you show that eighty cents is mighty little money for American business to pay its workers;
- (c.) pro-capitalist propaganda, if you show that the eighty cents will buy more than two weeks' wages of a worker in the city of Riga, when it comes to consumer goods;
- (d.) anti-White propaganda, if you show the man got only eighty cents because he was a Negro.

And so on, through a further variety of interpretations. The facts—man, happening, amount, place, time—are *true* in each case. They could be sworn to by the whole membership of an interfaith conference. But the interpretation placed on them—who communicates these facts to whom? why? when?—makes them into propaganda.

And interpretation can no more be true or untrue than a Ford car can be vanilla or strawberry in flavor. The questions of truth and of interpretation are unrelated categories. The essence of motive is that it is ultimately private and impenetrable, and interpretation commonly involves imputation of motive. You can dislike an interpretation; you can kill a man for believing it; you can propagandize him out of believing it; but you cannot sit down and *prove* that it is untrue. Facts and logic are useful in propaganda, but they cannot be elevated to the point where you can say, "Is it propaganda or is it true?" Almost all good propaganda—no matter what kind—is true. It uses truth selectively.

There is no secret formula which, once applied, provides an unflinching test for propaganda. It is not possible for a person unfamiliar with the part of the world affected, with the topic discussed, with the interested parties, and with the immediate politics involved to put his finger on an item and say, "This Rightist charge is propaganda," and then to turn and say, "But that Rightist statement is not propaganda. It is fact." Untruthful statements are made at times for other than propaganda purposes; truthful statements may be propaganda or not. The analyst must himself be an interested party. He must determine ahead of time what he will regard as propaganda, and what not. And he must do so by delimiting the field of his analysis before he starts. No one person or staff of people could ever trace all the motives behind a single statement; even to attempt that, he would have to be a novelist of the school of Marcel Proust. (And he would end up feeling like James Joyce, Gertrude Stein, or Franz Kafka.)

Figure 21: Mockery of Enemy Propaganda Slogans. Home-front propaganda was sometimes repeated in an inappropriate place, in order to achieve an effect contrary to that originally intended. These Nazi leaflets, dropped on American detachments in Europe,

used modifications of the "It's Your Job!" posters and advertisements used by the U.S. for home-front purposes.

Figure 22: *Mockery of Enemy Propaganda Technique*. When the content of enemy propaganda cannot be attacked, the media themselves can sometimes be criticized. This German leaflet attempted utilization of potential suspicions of Hollywood. In so doing, it used three techniques: built up from a news item, suitably faked; raised suspicion of the movies which the Germans knew our Army showed for morale purposes; and spread racial hate.

The analyst looks in the direction in which the message is going. He defines the *propaganda presentation* of the people who get the message in terms of *all the public information to which the persons addressed have access*. If he does not know the purpose of the message, he may divine it from the character of the audience and from the effect he presumes the message may reasonably be expected to have upon the audience. If he does not know the audience, he can at least follow the physical transit of the message. In what language does it move? Whence? Whither? When?

Figure 23: Direct Reply leaflet. World War II propagandists often succumbed to the temptation of using the enemy materials and sending them right back. Sarcasm can be effective if the reader identifies himself with the speaker and not with the addressee. In this Nazi leaflet from the Anzio beachhead, the Germans probably antagonized more Americans than they befriended. A simple statement of the news would have been more effective. (Signal Corps photo.)

The Stasm Formula.

The formula given earlier (page 44) was found useful in the spot analysis of German broadcasts, both open and clandestine, and Japanese materials, during the last months of the war. The formula reads:

Source (including Media)

Time

Audience

Subject

Mission

The neologism, *Stasm*, may serve a mnemonic purpose.

The formula works best in the treatment of monitored materials of which the source is known. First point to note is

the character of the source. There are several choices on this: the true source (who really got it out?) and the ostensible source (whose name is signed to it?); also, the first-use source (who used it the first time?) and the second-use source (who claims merely to be using it as a quotation?). Take the statement: "Harry said to me, he said, 'I never told anybody that Al's wife was a retired strip-teaser.' Mind you, I don't pretend to believe Harry, but that's what he said, all right." What are the possible true sources for the statement of fact or libel concerning Al's unnamed wife? What are the alternatives on ostensible sources? First use? Second use? The common sense needed to analyze this statement is of the same order as the process involved in analyzing the statement: "Reliable sources in Paris state that the visit of the American labor delegation has produced sensational repercussions in Moscow, and that Moscow, upon the basis of the American attitude, is determined to press for unification of the entire German labor movement."

Figure 24: Black Use of Enemy Subversive Materials. This leaflet, printed in brilliant red, white and blue, was found in the printshop of a Nazi military propaganda company overtaken in Lorraine. It apparently dates from 1939-40, when the Soviet Union and Nazi Germans were at peace, with the result that Communists throughout the world opposed the "imperialist war." The leaflet may or may not be duplicated from a French Communist original; the important thing is its reuse by the Germans. This constitutes black propaganda in one of its purest forms.

It is soon evident that the mere attribution of source is a job of high magnitude. A systematic breakdown of the STASM formula produces the following analysis outline, applicable to any single propaganda item, civil or military, in war or peace, spoken, visual, or printed. There are many other possible arrangements; the one given below is not represented as having official sanction or mysterious powers of its own. It has simply worked well for the author.

Figure 25-A: Black Use of Enemy Information Materials. The Nazis used this leaflet on the Western Front. The real source was a German propaganda unit; the ostensible source was U.S. Army facilities. Note that the leaflet has nothing to do with stopping VD among troops, which is what the originals sought; instead, its effect is to depress American troop morale.

Figure 25-B: Block Use of Enemy Information Materials. Compare this with the preceding leaflet. The real source in both cases is enemy. The ostensible source in both cases is the U.S. Army. The ostensible mission in both cases is the prevention of VD. But the mission is entirely different in the second leaflet. The first was

addressed to troops—Americans—designed to make them feel bad. The second was dropped on civilians—Filipinos—whom the Japanese thus tried to stir up against the Americans. (Leyte Campaign. Courtesy of Mr. Robert Kleiman.)

Complete Breakdown of a Single Propaganda Item.

a. Source

- (1) True source ("Where does it really come from?")
 - (a) Release channel ("How did it come out?") if different from true source without concealing true source
 - (b) Person or institution in whose name material originates
 - (c) Transmitting channel ("Who got it to us?"), person or institution effecting known transmission—omitting, of course, analyst's own procurement facilities
- (2) Ostensible source ("Where does it pretend to come from?")
 - (a) Release channel ("Who is supposed to be passing it along?")
- (3) First-use and second-use source (first use, "Who is said to have used this first?"; second use, "Who pretends to be quoting someone else?")
 - (a) Connection between second-use source and first-use source, usually in the form of attributed or unacknowledged quotation; more rarely, plagiarism
 - (b) Modification between use by first-use and second-use sources, when both are known
 - (i) Deletions
 - (ii) Changes in text

- (iii) Enclosure within editorial matter of transmitter
- (iv) Falsification which appears deliberate
- (v) Effects of translation from one language to another

b. *Time*

- (1) Time of events or utterance to which subject-matter refers
- (2) Time of transmission (publishing, broadcasting, etc.)
- (3) Timing of repetitions
- (4) Reasons, if any are evident, for peculiarities of timing

c. *Audience*

- (1) Intended direct audience ("in English to North America"; "a paper for New York restaurant operators")
- (2) Intended indirect audience (program beamed "in English to North America" but actually reaching Hong Kong and Singapore by deliberate plan of the sender; "a paper for New York restaurant operators" being faked and sent to Southeast Europe in fact)
- (3) Unintended audience (a Guadalcanal native studying *Esquire*; your aunt reading the *Infantry Journal*; a Chinese reading American wartime speeches against the "yellow devils" of Japan)
- (4) Ostensibly unintended direct audience (such as an appeal to strikers in very abusive-sounding language, sent to businessmen to build up opinion *against* the strikers, or Hitler's black use of the forged Protocols of the Elders of Zion)

d. *Subject* ("What does it say?")

- (1) Content listed under any convenient heading as though it were *straight news or intelligence*
- (2) Content epitomized as demonstrating *new propaganda technique* (such as, "Now they're trying to get us out of Tientsin by appeals to our isolationists!")
- (3) Content which may be useful in *counterpropaganda* (such as, "They said that the Greeks are our witless puppets, so let's pass that along to the Greeks")
- (4) Significance of content for *intelligence analysis* (examples: When the Japanese boasted about their large fish catch, it was an indication their fishing fleet was short of gasoline again, and that the fish catch was actually small; when the Nazis accused the Jews of sedition, it meant that rations were short and that the Nazi government was going to appease the populace by denying the Jews their scanty rations by way of contrast)

e. *Mission*

- (1) Nation, group, or person attacked
- (2) Relation to previous items with the same or related missions
- (3) Particular psychological approach used in this instance (such as wedge-driving between groups, or between people and leaders, or between armed services; or demoralization of audience in general; or decrease of listeners' faith in the news)
- (4) Known or probable connection with originator's propaganda plan or strategy

Figure 26: *Religious Black*. Perhaps because of their contact with Americans who happened to be missionaries, the Japanese overemphasized the effect of religion on Americans. They attempted crude appeals on religious themes. It is doubtful that leaflets such as this had any practical effect. (Philippines, 1944-45.)

Figure 27: *Maligner's Black*. One of the favored targets of block propaganda is the malingerer. Suspicion of successful malingering inevitably hurts the morale of a unit. Even if the enemy's instructions are not followed, the troops may suspect genuine psychoneurotics of having faked their troubles. Almost all participants in World War II issued such instructions; the Allied samples are not available for publication. This is a Japanese leaflet from the Philippines, 1944-45.

Such an outline would be useful only if it were applied in common-sense terms, without turning each item into an elaborate project and thus losing the woods in the trees. In most cases, it would suffice to state the item briefly for reference and study in the order of the entries. When poorly trained help is available, it is of course necessary to print or mimeograph a form to be used.

It is as vain to prescribe a propaganda analysis procedure without knowing the user as to prescribe an office filing system while knowing neither the nature of the office nor the kind of files kept. In time of war, subordinate commanders in operational areas will need to keep files at a minimum, while rear echelon or national facilities may be able to keep files of enormous range and thoroughness. In the recording of a large number of propaganda items, however, the material becomes hopelessly unmanageable unless there is some standardized system for organizing it. Mere alphabetization leads inevitably to the question, alphabetization of what?, and the analysis function can be exercised more readily in terms of the *sources* of propaganda than in terms of its incidental topics.

Identification of Enemy Plans and Situations.

Propaganda has its inevitable mirror image which gradually becomes plain to the analyst. If the analyst is careful, using shrewd judgment in appraising specific missions, he will gradually see forming in his files a record of the immediate and long-range aims of the propaganda originators. This becomes possible only when enough material is available, over a period of time to make up a complete list of the probable enemy propaganda objectives for the period covered. The intent of propaganda is always a result observable as action, however remote the action may be from the date of operation. Much of the propaganda of the Communist Party in the United States is directed to the inculcation of correct *scientific* thinking (see pages [70-74](#)) which will be of decisive use only when the remote Day of Revolution arrives. Few of the Communist leaders, even in private conference, would venture to predict the exact year of the Day of Revolution; some may not even expect to see it; but they believe that if the propaganda is effective, the "proletariat" will be "militant" and its leaders will be

conscious of their "historic role." From the propaganda of today, the action may be anticipated, no matter how distant it may seem; once the action is determined, the relation of other propaganda items to that action can be traced.

In war, the action sought is something militarily harmful to the enemy—strikes against his production, panic in his population, complaint from his consumers, mistrust from his newspaper readers and radio listeners (resulting in eventual subversive or negative action on their part), surrender of his troops, disunity of his political leadership to be expressed in deadlocks, and so on. In pre-belligerent or peacetime propaganda, the action sought is against the war-making capacity of the audience—against war itself, if the propagandist feels that his own population is in no immediate danger of being infected by defeatism.

Estimating the Enemy's Propaganda Situation.

In addition to presenting a picture of the enemy goals, and of the psychological means he considers to be useful in reaching those goals, propaganda analysis is also valuable in presenting the enemy's own propaganda situation. He avoids certain topics because he must. He talks about others because circumstances force him to do so.

For example, if the Germans stop talking about rations for Jews (in the World War II situation), it may be that their own people, filled with anti-Semitic poison, have been protesting the issuance of rations. Alternatively, it may mean that the Nazi authorities have just cancelled Jewish rations and are letting the Jews starve or are murdering them overtly. If the Germans follow this up with an item on the poor barley crop, it may be that they are preparing the sentimental and humane listeners in their own audience for the announcement of Jewish starvation. If they run Paris-quisling accounts of Jewish hoarding, and of Jews concealing large

quantities of food, it means that they are almost certain to be under pressure to explain their Jewish policies and that, therefore, two factors face the German propagandist: first, he must get ready to announce the attack on the Jews; second, he thinks that the Jewish situation is going to arouse anti-Nazi sentiment even in Germany (if these are German-language programs) and he is therefore compelled to defend something because public opinion is believed by him to be against it. Out of a silence (no further news on rations), a domestic item (poor barley crop), and a foreign item (Paris Jews allegedly hoarding), it is possible to reconstruct a whole situation. The reconstruction may fall, if other interpretations arise, but it provides a starting guess.

The situation of enemy morale is often reportable through propaganda analysis long before it can be described by eyewitnesses. Omissions of attacks on the Church may indicate that the religious problem has become touchy. Failure to attack Communism may mean that the government is seeking a diplomatic deal with a Communist state. Mention of children may refer to the fact that parents complain of cold schools, bad food, absent doctors. Good morale is shown by a quiet tone in propaganda; bad morale is shown by extremes, whether of silence or of great vehemence. It is useful to know what the enemy propagandist thinks he is doing, what he considers the obstacles to his propaganda. Such considerations inevitably get to be embodied in the propaganda itself. A tone of extreme defiance, poor international cooperation, war bluster and so on may often spring from the desire to divert a hungry or discontented home public from its real worries at home to imaginary worries abroad.

Propaganda as a Source of Military Intelligence.

Propaganda analysis, or *propanal* for short, can serve as a very useful adjunct to military intelligence even if when not directly connected with counterpropaganda operations. In the first place, the enemy must give news, comment, opinion, entertainment in order to get attention. The incidental content and make-up of this propaganda is itself useful study material. If his ink is bad, his paper poor, his language incorrect, it shows shortages of supply and personnel. If he boasts about his victories, he usually gives his version of place names and aids cartographic reporting. In mentioning the names of heroes, he may supply order-of-battle. In making a good story out of his economic situation, he fills in missing statistics; even if the figures are falsified, they must be falsified for a purpose and can be used in conjunction with others in making up an estimate.

Nothing is as smart as a human being except another human being. What any one man can try to achieve in the way of deceit, another man can try to figure out. The bulk of propaganda, short of peremptory tactical leaflets, is filled with information about the enemy's personnel, his opinion of himself, his opinion of you, his state of mind, his order of battle, his economic system, and all the rest. The Japanese government, throughout the war, kept the United States informed *in English* of the changes of ministers and other high officials in the Japanese government. This gave us good political background. There was no use their trying to hide it over a long period of time, and presumably *Joho Kyoku* (the Imperial Japanese Board of Information) figured that the help it gave the Americans, in filling out their political intelligence files for them, would be more than counterbalanced by the fact that such news would make American newspapermen, officials, officers and others read the propaganda in order to get the facts.

Over and above the direct contribution to straight news or intelligence, enemy propaganda in times of war or crisis

affords a clue to enemy strategy. If the coordination is not present the propaganda may do the enemy himself harm. But the moment coordination is present, and one end of the coordinate is handed over to us, we can start figuring what the coordination is for. Sometimes propaganda is sacrificed for weightier considerations of security; German propaganda gave little advance warning of a war with the U.S.S.R., and Soviet propaganda gave none. In other instances, the coordination does give the show away.

In 1941-1942, the Japanese radio began to show an unwholesome interest in Christmas Island in its broadcasts to Japanese at home and abroad. Christmas Island, below Sumatra, was pointed out as a really important place, and tremendously significant in naval strategy. Subsequently the Japanese armed forces went to and took Christmas Island. The home public was delighted that this vital spot had been secured. Of course, Christmas Island was not as important as the Japanese radio said it was, but the significant thing was that the radio talked about it *ahead of time*. For what little it was worth the Japanese had given us warning.

Enemy realization of an impending defeat may be preceded by disparagement of the importance of the area in which the defeat is to take place, or by description to the home audience of the enormous strength which enemy forces face at that particular place. Enemy action—when the enemy is security-minded—may be anticipated from his complete silence on something which he would normally talk about. It must have seemed odd that the Americans stopped talking about nuclear fission altogether, when prewar years had seen a certain number of news items on the subject in the New York press each month.

A nation getting ready to strike *à la* Pearl Harbor may prepare by alleging American aggression. A nation preparing to break the peace frequently gets out peace propaganda of the most blatant sort, trying to make sure that its own

audience (as well as the world) will believe the real responsibility to lie in the victim whom he attacks. Hitler protested his love of Norwegian neutrality; then he hit, claiming that he was protecting it from the British. No hard-and-fast rules can be made up for all wars or all belligerents. The Germans behaved according to one pattern; the Japanese, another.

For example, the German High Command sought to avoid bragging about anything they could not actually accomplish. They often struck blows without warning but they never said they would strike a blow when they knew or believed that they could not do it. The British and Americans made up a timetable of this, and were able to guess how fast the Germans thought they were going to advance in Russia. Knowing this, the British and Americans planned their propaganda to counter the German boasts; they tried to pin the Germans down to objectives they knew the Germans would not take, in order to demonstrate to the peoples of Europe that Nazi Germany had finally bitten off more than it could chew.

Later, the Allies remembered this German habit when the Nazis on the radio began talking about their own secret weapons. When the British bombed the V-1 ramps on the French coast, the German radio stopped that talk. The British therefore had additional grounds for supposing that the ramps they had bombed were a part of the secret weapon the Germans bragged about. The British further knew that the Germans would try to counter the psychological effect of the announcement of Allied D-Day with some pretty vivid news of their own. When the German radio began mentioning secret weapons again, the British suspected that the Germans had gotten around the damage done to the ramps. D-Day came; the Germans, in one single broadcast designed to impress the Japanese and Chinese, announced that the secret German weapon was about to be turned

loose, and that more such weapons would follow. One day later the first V-1 hit London.

Chart IV

In order to follow this type of propaganda, a quantitative chart is needed. A sample imaginary chart for a three-month period is given in [chart IV](#). This chart reveals at a glance the fact that the enemy kept mentioning food supply and naval warfare until the middle of March, because he presumably thought his blockade runners would bring in more food. After March, food drops in emphasis but naval warfare continues to be stressed. In May, following enemy admission to himself of the hopeless naval situation, naval warfare drops almost altogether out of sight. Foodstuffs continue to be modestly mentioned as the enemy explained away minor difficulties, but the use of secret weapons propaganda shows that the enemy propagandists had to have something sensational to keep up the courage of the home audience. Whether the enemy really had a secret weapon or not, depends on the national character, past records, and so forth. The Germans and Japanese both said they had world-shaking secret weapons. The Germans delivered; the Japanese did not.

Such quantity records will also be useful in showing the enemy's propaganda statistically with reference to number of words uttered on each of his major subjects, number of inches of newspaper columns for specified kinds of news, and so on. Percentage charts show which major shifts his

propaganda performs. Audience charts (that is, how much time he spends addressing workers, pacifists, mothers, minorities, etc.) show which groups he is really trying to reach. Emphasis charts for selected topics on which your own propaganda has been active show how much you force him to talk about something which he may not wish to discuss.

Such statistical use is possible only if usable records are maintained. A basic item-by-item file of all important or new items, combined with a worksheet of the amount of radio time or printed space the enemy put into use for a stated period, will provide the materials needed for *propanal*. *Propanal* is indispensable to psychological warfare. It sifts ordinary intelligence out from propaganda in one process, processing straight intelligence ready for the intelligence people to use, yet providing analysis for psychological warfare purposes.

For peacetime purposes, it is to be remembered that though enemies may hide their scientists, their launching ramps, or their rockets, they cannot hide the occasion for war, nor their own readiness measures. No government can afford to seem the plain unqualified aggressor. *Propanal* may prove to be one of the soundest war-forecasting systems available to us in a period of ultra-destructive weapons. Psychological mobilization may be disguised: it cannot be concealed.

CHAPTER 8

Propaganda Intelligence

The psychological warfare operator can usually count on two basic interests of his listener. In the field he can be sure that the enemy troops are interested in themselves. In the

enemy homeland he can be sure that the civilians are interested in *their* enemy—himself. He has therefore a certain leeway in which he can be sure of doing no harm, and may accomplish good, if he confines his propaganda to simple, factual and plainly honest statements on these subjects. Pompousness, intricacy and bad taste will recoil against him; it is unwise to employ these even when the situation is well under control. In a developing situation the propagandist can remain safe by confining himself to simple statements as to how strong his country's armed forces are, how realistic and effective their leadership. Elementary information giving the favorable aspects of his economic, strategic and diplomatic situation may also prove valuable initial propaganda.

This interest can be counted on throughout the war. The enemy is always news. The wise enemy realizes this and keeps himself in the news, trusting that in the wider understanding of himself, his politics and culture there is the opening for a more favorable peace in the event of defeat, or for a more docile submission in the event of his own victory. Only unimportant enemies fail to become news. (Few Americans, for example, realize that we were at war with Bulgaria in World War II. Had the Bulgars developed sensational weapons, there would have been a sudden upswing of interest in them. People would have realized that Bulgaria, like Hungary and long-lost Avaria, was once a fierce Asiatic state grafted onto the European system; the fabulous power of the Old Bulgarian Empire would have become known, and the names of Krum, Symeon and the Czar Samuel added to our calendar of hate. But Bulgaria never did enough against the United States to count as an enemy, and even succeeded, by diplomatic ineptitude, in getting into a state of war with all the Axis Powers and all the United Nations simultaneously; Bulgaria escaped the fame which goes with hostility. Contrast this with Japan: thousands of

Americans have learned Japanese; Japanese national character is known to us; war has done in a five-year span what education could not have accomplished in a generation.) The wise propagandist can, when in doubt, play good music on the air, or he can—with equal prudence—give the enemy his own elementary-school history and language texts. These do no harm, and may achieve something.

Figure 28: Nostalgic Black. Soldiers in all wars have gotten homesick. Propaganda appeals to homesickness in many ways. One of the simplest is the device shown in this German black leaflet, which shows the husband turning off the alarm clock while the wife wakes up. The printed message on the reverse makes out a discouraging case for the soldier's opportunity to return home, pointing out that the GI in Europe, even after victory, will face "that nasty jungle war ... in the Far East." No identification of the leaflet is given.

Figure 29: *Nostalgic White, Misfire*. Figure 30 was carefully adapted to Japanese customs. The mere fact that the Americans knew enough about Japan to celebrate a homey Japanese holiday was probably enough to make the Japanese reader examine the leaflet carefully. Here is a combined nostalgic and surrender leaflet showing how surrender leads the Japanese soldier back to his wife and children. The drawing looks American rather than Japanese, and it is not likely that a genuine Japanese could have been made homesick by use of this leaflet.

Figure 30: *Nostalgic White*. On March 5 of every year the Japanese celebrate the colorful custom of Boys' Day. Kites in the form of carp are flown over the cities and countryside and millions of families set out to give their little sons an excursion or some other treat. (It is characteristic of the Japanese that there is no Girls' Day.) This leaflet, from Psychological Warfare Branch,

USAFPA, was designed for dropping on May 5. It ends with the appeal, "You must guard the strength of the new Japan, your treasure, your children." Thus it combines homesickness, patriotism, and pre-surrender indoctrination.

News as Intelligence.

Harmlessness is, however, a poor ideal for men at war; the propagandist who keeps out of mischief is doing only half his job. To make his message take effect he must convey to the enemy those kinds of information which tend to disrupt enemy unity, discount enemy expectation of success, lower the enemy will to resist. He cannot do so by means of recorded symphonies or tourist lectures, no matter how well done. He must turn to the first weapon of propaganda, the news.

The official propagandist is not a newspaperman. Since he speaks for an army or a government, his utterance is *officially responsible*. He must be as timely as the peacetime press, but must at the same time be as cautious as a government press agent. He is torn between two responsibilities: his responsibility to the job of propaganda, which requires him to get interesting information and get it out to the enemy quickly; and his responsibility to the official policies of his own government, which requires him to release nothing unconfirmed, nothing that could do harm, or that might embarrass or hurt the government. (A sort of institutional schizophrenia is common to all propaganda offices.)

The sources of news are various. Classified incoming operational reports of the Army and Navy contain material of high interest to the enemy. There are obvious reasons for denying access to such information to the propaganda people. Propaganda men might think of their audience first and security second. If they do not know the secret information, but are advised by military consultants who do,

security will be better maintained and the propagandist will not labor under the handicap of a double standard of information—what they know, and what they dare to tell.

In technically advanced countries, the regular commercial facilities of press and radio continue to do a normal news job, and usually do better work than the drafted amateurs in the government. (What intelligence agency in Washington could compile a weekly report as comprehensive, well edited and coldly planned as *Time* magazine?³² The author often yearned to paraphrase *Time*, rearranging it and classifying it TOP SECRET, in order to astound his associates with the inside dope to which he had access.) The nature of news is not affected by its classification, and the distinction between news produced on the Federal payroll and news produced off it often consists of the superior professionalism of the latter.

The intelligence that goes into the making of propaganda must compete for attention with the home newspaper of the enemy. It must therefore be up-to-date, well put, authentic. There is no more space in propaganda for the lie, farce, hoax, or joke than there is room for it in a first-class newspaper. Even if exaggerations or nonsense appear in the commercial press of his own country, the propagandist must realize that he is Honorary G-2 to the enemy—a G-2 whose function consists of transmitting news *the ultimate effect of which should be bad* but which should go forth with each separate item newsworthy and palatable. (A little trick of the human mind helps all propagandists in this regard. Most people have a streak of irresponsibility in them, which makes bad news much more interesting than good. There is a yearning for bad news and a genuine willingness to pass it along. Bad news increases the tension upon the individual and tickles his sense of the importance of things; good news relieves the tension, and to that extent has the effect of a let-down.)

The palatability of news is not concerned so much with its content as with its trustworthiness to the enemy, its seeming to deal with straight fact, its non-editorialized presentation. (One of the reasons why Soviet Communist propaganda, after all these years, is still relatively unsuccessful, lies in the incapacity of the Communists to get out a newspaper with news in it. They put their editorial slant in all their news articles. "Man bites dog" would not make the front page in Russia unless the dog were Stalinist and the man reactionary.)

Figure 31: Oestrous Black. Young human beings, especially young males, are apt to give considerable attention to sex. In areas of military operations, they are removed from the stimuli of secondary sex references which are (in America) an accepted part of everyone's daily life: bathing beauty photos, magazine covers, semi-nudes in advertisements, etc. Our enemies tried to use the resulting pin-up craze for propaganda purposes, hoping that a vain arousal of oestrus would diminish morale. This choice Japanese item is from the Philippines. (The best collection of these is kept in a locked file—for experts only—at the Library of Congress.)

The Japanese who obediently hated the Americans when it was their duty to do so nevertheless could not help looking at maps that showed where the Americans actually were. Nazis who despised us and everything we stood for nevertheless studied the photographs of our new light bombers. The appeal of credible fact is universal;

propaganda does not consist of doctoring the fact with moralistic blather, but of selecting that fact which is correct, interesting, and bad for the enemy to know.³³

On the friendly side of the battle lines, the procurement of our own news is a budgetary matter. The propaganda office can subscribe to the news tickers, newspapers, telegraph services, and so on. How much is a matter of administrative housekeeping. In the field, the communications officer can frequently steal news from the news agencies of his own country or allied countries by the process of picking it out of the air. It would be highly unpatriotic of the news agency to send him a bill in the zone of operations, and he can classify his record copies of his material RESTRICTED so that the owners of the material would have no legitimate business acquiring copies that could later be taken into court to support a claim. (Americans would not do this, of course; the reference is to Byzantines.)

Figure 32: Oestrous Grey. This and the succeeding illustration show a series of four leaflets which the Nazis used against American troops in Europe. Anti-morale in intent, they rely on the illustrations to get attention and then develop their malicious, salacious anti-Semitic story. The series illustrates the strength and weakness of Nazi propaganda.

Figure 33: *Oestrous Grey, Continued*. Concluding the series begun in the preceding illustrations, these Nazi leaflets tried to lower American morale by combining oestrus, resentment, discouragement and inter-American hatred. The Dr. Mordecai Ezekiel mentioned in No. 2 is a real person, a splendid American and conscientious official. The Nazis used his name because it was so plainly Jewish, hoping that the ignorance of the American troops would permit their lies to spread.

The Need for Timeliness.

Some white propaganda and all black propaganda needs to be written so as to fit in with what the enemy is reading, listening to, or talking about in his home country. The use of antiquated slang, an old old joke, reference to a famous man as living when he died some time ago, lack of understanding of the new wartime conditions under which the listener lives and worries—such things sour a radio program quickly. In radio, the propagandist must be living in the same time as his listeners. Since the propagandist cannot shuttle between the enemy country and his own radio office (unless he is a braver and more elusive man than governments ever call for); he must try to get the up-to-the-minute touch by other means. Without it he is lost. He will be talking about

something that happened a long time ago, not the situation which he is trying to affect.

This need may be called *timeliness*.

It can be served by obtaining all the most recent enemy publications that may be available, by listening attentively to enemy prisoners and captured civilians, and by carefully analyzing the enemy's current broadcasts to his own people. The Nazis made the unnecessary mistake of assuming that isolationism used the same old language after Pearl Harbor. They were right in assuming that there was considerable anti-internationalist and anti-Roosevelt sentiment left in the United States, but they were hopelessly wrong in using the isolationist language of mid-1941 as late as mid-1942. Pearl Harbor had dated all that and the isolationist-interventionist argument had shifted to other ground. When the Nazis went on using the old language, they were as conspicuous as last year's hat at a women's club. Instead of making friends and influencing people, they made themselves sound ignorant and look silly. They lacked the element of timeliness. They could have gotten it by procuring representative American publications in Lisbon and studying them.

Propaganda is like a newspaper; it has to be timeless or brand-new. In between, it has no value.

Figure 34: Obscene Black. One of the wildest adventures of World War II concerns this now rare "Chinese Federal Reserve Bank" one-dollar bill. The bank was a Japanese puppet outfit in Peiping. The Japanese had banknotes engraved by Chinese artists, and only after the new pro-Japanese banknotes had been issued all

over the city did they notice what the "ancient scholar" was doing with his hands. The engraver had disappeared and the Chinese enjoyed a rare, morale-stimulating laugh. Propaganda gestures such as this—spontaneous, saucy, silly—achieve effects which planned operations rarely attain.

Opinion Analysis.

In a favorable intelligence situation, espionage can succeed in running a Gallup poll along the enemy's Main Street. When this is done, the active propaganda operator has some very definite issues at hand on which he can begin work. When it is not possible to send the cloak-and-dagger boys walking up and down the Boulevard of the Martyrs of the Eleventh of July, propanal, properly handled, can produce almost the same result. The opinion of the enemy can be figured out in terms of what enemy propaganda is trying to do.

To be useful, opinion analysis must be systematic. For a while the author had the interesting job of interviewing all the latest arrivals from Tokyo at a certain headquarters. The travelers would usually be pumped up with a sense of their own smartness in having evaded the Japanese and arrived at Allied territory. You could almost hear them thinking, "Oh, boy, if Gendarmerie Chief Bakayama could only see me now!" They were ready, in Army parlance, to spill their guts. The only item on which most of them maintained one-man security was the question, "Why, chum, did you yourself go to Tokyo in the first place?" Outside of that, they were eager to talk. (Some of them had frightfully good reasons to be eager; the adverb is literal.) With such sources of information, the author thought that he could find out in short order what the Japanese were thinking.

He found out, all right. He found out every single time. The refugee engineer said the Japanese were so depressed that there was a bull market in butcher knives. The absconding dairyman said the Japanese were ready to die with gloom.

The eloping wife said she never saw happy Japanese any more. The military school deserter said the Japanese lay awake all night every night listening for American air raids. The reformed puppet said the Japanese had just gone to pieces. Then each of them grinned (the interviews were individual, of course), and expected to be patted on the head for bringing such good news.

Figure 35: Informational Sheet. This British leaflet combines a message for Arabs with instructions for British pilots forced down in the desert. The propaganda content is closely associated with the practical mission of the leaflet.

Their comments were worthless. What the enemy thinks *in general* is worth nothing unless your troops are already in his suburbs. What an informant thinks the enemy thinks is worth even less. What do you, reader, think right now? What do you think you think? See? the question is nonsensical. To work, it has to be specific: What do you think about the price of new suits? What do you think about Senator O'May and Congressman MacNaples? Do you think that we will ever have to fight Laputa? Are you satisfied with your present rate of pay? Why?

What a person thinks—his opinion—is workable in relation to what he does. In practical life his opinion takes effect only when it is part of the opinion of a group. Some groups are formed by the common opinion and have nothing else in common: at a spiritualist meeting you may see the banker sitting next to his own charwoman. Most groups are groups because of things which the people *are* (Negroes, descendants of Francis Bacon, the hard-of-hearing); or things they *do* (electrical workers, lawyers, farmer, stamp collectors), or things they *have* (factory owners, nothing but wages, apartment houses) in common. The community of something practical makes the group have a community of opinion which arises from the problems they think they face with respect to their common interests. Such groups are not only opinion groups, they are interest groups. It is these groups that do things *as groups*. It is these groups that propaganda tries to stir up, move, set against each other, and use in any handy way. (Few individuals belong to just one group at a time; the groups are almost illimitable in number.)

The propagandist should not get the idea that just because a group exists it is a potential source of weakness or cleavage. Workers are not always against employers, nor the aged against the young, nor women against men, nor shippers against railwaymen. In a well run society, groups have interest only for limited purposes. Railwaymen are not permanently hostile to truckers, shippers, fliers, canal operators. At the moment they may be maddest of all at the insurance companies because of some quarrel about insurance premiums and risks.

The poor propagandist tries to butt in on every fight, even when there is none. Often his propaganda is received the way an intervenor is received in most family quarrels, with the bland question, "*What* fight? We ain't mad." Sound propaganda picks only those group issues which are acute

enough to stand a little help from outside. If outside help would be a kiss-of-death to the group that is helped, then black propaganda instead of white is indicated. In any case, sound operating intelligence is the first precondition to the attempted psychological manipulation of enemy groups.

Figure 36: Counterpropaganda Instructions. The Wehrmacht in the West had a unit bearing the code designation Skorpion. This unit combined the functions of offensive and defensive propaganda, which remained separate throughout the war in the U.S. Army. The information service sheet shown provides clear, simple leads for counterpropaganda by selecting usable (usable for the Germans, that is) items from Allied sources. From this raw material, morale officers could make up their own leaflets, lectures, or broadcasts.

Profile of Opinion.

Opinion analysis can present a *profile of enemy opinion*. To make a profile, proceed as though assembling a photo-strip map taken by an aerial camera. Take the whole enemy country and divide it into major groups by percentages. Select, particularly, those groups you are interested in addressing. If you have *kamikaze*-minded collaborators, send them in to the enemy country to ask a thousand enemies the

same question, selecting the thousand the same way that the total population is made up. If the country is 32% Catholic, the thousand interviewees should include 320 Catholics. If the country is 36% urban and 61% rural (3% unexplained), get 610 of your interviewees from the country. The questions do not have to be asked in precisely the same form, but they should bear on precisely the same issues. When your agents come back you have a poll. If you do not have agents, then use the percentages from reference books, and try to estimate how many definite groups have what specific grievances. You are then in a position to proceed.

Interrogation.

When processing prisoners of war, it is an excellent idea to deal with them for morale intelligence as well as for general and assorted military information. Questions should not aim at what the prisoner thinks he thinks about God, his leader, his country, and so on, but should concern themselves with those things which most interest the prisoner himself. Does his wife write that the babies have enough diapers? How is the mail service? Is he worried about war workers getting his prewar job? How much money is he saving? How is the food? How were the non-coms—did they treat him right? Did he get enough furloughs? Does he think that anybody is making too much money at home? Most men carry over into military services the occupational interests which they had as civilians. A carpenter in uniform, even though he may be a good infantry top sergeant, is still a carpenter, and information can be obtained from him as to the problems of skilled labor, of union members, of the poorer city dwellers, and so on.

The profile obtained from civilian polls or from propanal can then be paralleled in the field. Set up a graph showing

the entire enemy army. Use several graphs if the army splits along racial, national or plainly sectional lines. On each graph, enter the component groups. From the poll or from the interrogations, list the dissatisfaction in terms of seriousness with which the dissatisfyee attributes to it; it is not what you think he should worry about that is important. It's what actually he does worry about. His weighting counts. Make up a scale, quantitative on the actual count of mentions of particular gripes. (For example, out of 699 prisoners, of whom 167 were union members in civil life, there were 234 separate voluntary mentions of dissatisfaction with the enemy government's labor union policy). When that quantitative count changes up or down, you have a definite guide with which to control your own propaganda policy.

Figure 37: Defensive Counterpropaganda. The "National Socialist Leadership Staff of the Wehrmacht" got out this Communications for the Troops as a guidance sheet for company talks. The content includes "Thoughts About the Volkssturm," "The Celebrated American Freedoms," and "Small Requests, but Important." This issue is dated from January 1945.

Or you can proceed qualitatively. List enemy dissatisfaction under terms such as these for any one issue (shoe rationing,

health facilities, minority rights, esteem for government leaders, etc.): Prisoner—

- (1) is completely satisfied and has no complaints.
- (2) has a few complaints but is generally satisfied.
- (3) has many complaints and does not expect improvement.
- (4) is despondent about the whole situation.
- (5) is definitely antagonistic to home authorities in this matter.

Rate each prisoner or captured civilian according to your best judgment. Then make up percentage lists of the grounds for dissatisfaction of each component group in the enemy society. (This latter figure will be impressive in documents but will not mean as much for practical purposes as will the more specific percentages under each separate head.)

If you feel like showing off, average everything into everything else and call it the Gross Index of Total Enemy Morale. This won't fool anyone who knows the propaganda business, and you won't be able to *do* anything with or about it, but you can hang it on a month-by-month chart in the front office, where visitors can be impressed at getting in on a military secret. (Incidentally, if some smart enemy agent sees it and reports it back, enemy intelligence experts will go mad trying to figure out just how you got that figure. It's like the old joke that the *average* American is ten-elevenths White, 52% female, and always slightly pregnant.)

Specificity.

Good propaganda intelligence provides:

- (a) news;
- (b) military intelligence which can be released as news;
- (c) military intelligence which cannot be released as news, but knowledge of which will prevent the propaganda operator from making mistakes or miscalculations in reporting the news;
- (d) enemy news;
- (e) up-to-the-minute enemy slang, hobbies, fads, grievances, and other matters of current public attention;
- (f) specific grievances of specific groups and of the nation as a whole, should these arise;
- (g) information about probable inter-group conflicts;
- (h) types and forms of discontent with enemy authority;
- (i) identification of unpopular or popular enemy personalities;
- (j) all other information that will enable the psychological warfare operator to act promptly and sympathetically in taking the side of specific enemy individuals against their authorities or other enemy groups.

Figure 38: Black "Counterpropaganda." Seeing that the Germans had a good counter propaganda medium, the Allies decided to use it themselves. They issued this "counterpropaganda" sheet, shown in original and facsimile in English. The "blackness" is not very black, since few Germans would consider this to be German in origin, once they had read it.

Enemy opinion cannot be manipulated in general. It must be met on its own ground—the current everyday thoughts of enemy citizens and soldiers. These thoughts do not usually concern grandiose problems of political ethics. They are practical like your own.³⁴ They must be appealed to in a way which makes the listener really listen, makes the reader stop and reread, makes them both think it over later. Getting the attention of the enemy is not enough. Most enemies will pay plenty of attention to you—too much, at times. Getting sympathetic attention is what counts.

This can be done only with specific grounds. With the news, you and he have a genuine common interest. Using his real troubles as a link, you must create that common interest. The force, the effectiveness of your argument may make him forget that it is the enemy who has brought his attention to this issue. You must leave him with the feeling, "By golly, that fellow is right!"

But to talk about his troubles, effectively, you must know what they really are. You must see it his way before you start showing him that his way is your way, that you think that he is really on your side, and that his bosses' side is wrong, incorrect and doomed to get whipped, anyhow. Propaganda can operate only on the basis of *specificity*. Real persuasion can be sought only on the basis of real sympathy with real troubles. Old, incorrectly guessed, or poorly described issues are worse than none at all.

CHAPTER 9

Estimate of the Situation

In physical warfare, the inherent instability of every situation is concealed by the apparent definiteness of the operation. Panic, revolt or dissolution of regiments is not normally figured into the situation. The assumption is made—and for professional military purposes must be made—that all identical units are of equal quality unless proved otherwise, that all men in a unit will respond with psychological uniformity unless they are reported out physically by medical reports, that the unit will be capable of doing tomorrow what it did yesterday. The terrain comes in as a constant factor and even such variables as weather can be calculated in terms of a predictable risk. Nevertheless, every experienced soldier knows that things do not always work out the way they should, that unexplained or unforeseen factors sooner or later complicate or frustrate the best plans, and that warfare is a huge gamble with a superficial but very necessary coating of exactitude.

In psychological warfare, these considerations apply even more sharply. Combat at least has terrain, order of battle, logistics, estimated capabilities and other concrete factors with which to figure. There is a known degree of difference

between one enemy division and five enemy divisions. There is the possibility of computing the time which the enemy will need to fulfill this capability or that, and the equally good possibility of computing time on our side for countermeasures. Even in such very long-range operations as strategic bombing, economic factors can be figured out to give the operation at least the coloration of precision. With propaganda, none of this is possible.

The propagandist never knows the terrain, because his terrain is the enemy mind in its entirety—a factor beyond the understanding of any man. The enemy can have strongholds of faith to be shaken but the propagandist can never say, "This factor is finished. Therefore we proceed to the next." There is neither victory nor defeat, only the endless seesaw of probable accomplishments or probable blunders. The honest psychological warfare operative will admit that he does not know where he is at any given moment, how far from his start, how near to his goal. Even with surrender of the enemy, propaganda cannot be judged to have met with complete failure or complete success, because propaganda is an interminable stream going on into international affairs and carrying over to the next war. Psychological warfare can be given apparent certainty only by the creation of assumptions on the part of the planner. The assumptions will not stand up if questioned by a clever philosopher, any more than did the basic assumptions of the German General Staff when questioned by the sardonic Trotzky at Brest-Litovsk. Nevertheless, the assumptions can work for planning purposes.

Definiteness of the Goal.

The first assumption to make is this: goals can be sought with some hope of success. The propaganda planner uses the intelligence available to him. He consults with

knowledgeable persons. He defines (1) specific kinds of demoralization and discord he wishes to create, (2) the particular enemy audiences in which he wishes to create them, (3) the types of argument he proposes to use, and (4) the media through which he intends to project his propaganda. He assumes that the kind of discord, depression or surrender which he seeks will hasten the end of the war. In so doing, he is on ground only a little less sure than that of the strategic bombing planner, who also seeks results indirectly.

For field operations, the goal of the propagandist is to sap the resistance of enemy troops. If the troops are moving forward and are not likely to be in a mood to surrender, then other goals, such as conflict between officers and men, encouraging desertion, informing enemy troops of bad news elsewhere in the war, or morale-depression may be sought. In each case, the propaganda must be aimed at a goal, and a goal is as essential to the operation of psychological warfare as is definition of a target for artillery or bombing. No one ever accomplishes anything shooting "somewhere or other"; no one propagandizes successfully unless he seeks the attainment of a state of mind or series of actions which may actually happen. Most times, it is thus impossible to aim at the total surrender of the enemy armies or state. One can aim for concrete operational purposes only at specific enemy troubles or effects. For the field, troop surrenders; for the home front, interference with the enemy war effort—these are about as general as goals can be made.

They can be made very specific indeed. A situation reported by intelligence may provide an almost perfect opening for psychological warfare. If the enemy press reports that twenty-three embezzlers have been detected in food supply and have been shot, it is a perfect opening for the black propaganda goal, "to conduce to enemy mistrust of food control, to increase food spoilage, to lower efficiency of

enemy food consumption through enhancing misuse of food supply." Some of the means might be these. An alleged enemy leaflet could be prepared warning quartermasters to destroy canned foods that have lost labels; another leaflet describing diseases that come from partly spoiled food; an "enemy" allegation (from your side or, better, from neutral territory) that the political chiefs of the enemy country are the biggest food embezzlers of all; getting a black-radio and rumor campaign under way describing the seven hundred and eighty-three people who died last month as a result of eating musty food (even though your own doctors say the mustiness may not interfere with the wholesomeness of that particular food); describing common diseases that actually occur in the enemy country, such as arthritis, stomach ulcers, sinus headaches or infectious jaundice, and blaming them all on the foods the enemy government distributes to the enemy people. On white radio, features could be put on describing the unhappy plight of your own side, where people may get their rashers of bacon for breakfast only every other day, and where nobody can have more than three eggs at a time; point out that the government is worried that food prices have risen 5.3%, without mentioning at that time the fact that enemy prices have gone up 45% or more. The definite goal gives the propaganda boys something to work on. Propaganda to the allies or satellites of the enemy can point out that the enemy government is apt to dump the spoiled food onto the foreign market, that food spoiling in territory of the big enemy will make him requisition more food from his little allies, et cetera.

When the topic has been worked for a while, stop; keep it up only if actual news from the enemy country shows that they are having enough real trouble with food to make your *improvements* on the fact thoroughly credible.

Propaganda cannot function in a vacuum framed by moral generalities. The goal must be defined in the light of

authentic news or intelligence. The operation can be sustained only if there is enough factual reality behind it to make the propaganda fit the case known or credited by the majority of the listeners, counted one by one.

Since no trouble-free, wartime country has been known to exist, the goals should be tailored to the troubles of the particular enemy, and should aim at increasing real difficulties, building up pre-existing doubts, stimulating genuine internal hostilities. Propaganda which invents pure novelty gets nowhere. The Russians did not hesitate to appeal to Bismarck in order to show the professional German soldiers what a rotter Hitler was, and how stupid the Nazi strategy. But if Bismarck had actually said nothing on the subject of the army in general or an Eastern war in particular, they would have been wise to leave him alone. If the Japanese had tried to make the ex-Confederate States secede all over again, they would not have gotten anywhere because they would not have started with a real grievance. But if they had alleged that the Negro units were used for stevedoring because Whites regarded Negroes as unworthy of carrying weapons, they might have hit on a real grievance. The goal must be deeply bedded in reality.

The Propaganda Man.

It has been pointed out that the true terrain of psychological warfare—the private thoughts of the enemy people, one by one—is known only to God. There is, however, a way of finding approximate terrain. That consists of setting up a hypothetical enemy listener or reader, and then trying to figure things out from *his* angle.

The first thing to do with the hypothetical man is to make him fit the kind of person who does get propaganda. In dealing with China, for example, it would be no use to take a statistically true Chinese, who lived on a farm 1.3 acres in

size, went to town 5.8 times a year, had 3.6 children, and never read newspapers. The man to be set up would be the *reachable* man, the city, town or village dweller who had an income 2.1 times greater than that of the average in his county, who owned 1.7 long coats, and who shared one newspaper with 6.8 neighbors. Take this lowest-common-denominator of a man who can be reached by enemy propaganda and by yours. Name him the Propaganda Man. (Realistically speaking, modal and not arithmetical classes should be set up.)

Make up the prewar life of the Propaganda Man. Use your regional experts as informants. What kinds of things did he like? What prejudices was he apt to have? What kind of gossip did he receive and pass along? What kind of words disgusted him? What kind of patriotic appeal made him do things? What did he think of your country before the war? What things did he dislike you and your people for? What myths did he believe about America—that all Americans drove sports convertibles while drinking liquor? that all had blonde sweethearts? that all exchanged gunfire periodically? Of what American things did he think well—food, shoes, autos, personal freedom, others? What is he apt to be thinking now?

To this add what the enemy propaganda is trying to do to its Propaganda Man. That is, size up the domestic propaganda of the enemy in terms of the concrete individuals at whom it is aimed. This may reveal the enemy's vital necessities and his concealed weaknesses. What *are* the leaders trying to do? Are they trying to make the Propaganda Man get to work on time? Are they trying to make him give up holidays willingly? Are they trying to make him think that your side will kill him if you win? Are they trying to keep him from being worried about his city going up in an incandescent haze? Are they trying to make him believe that the concrete shelters are good? Why are they

harping so on the safety of the shelters? Has the Propaganda Man been muttering back about the flimsiness of the shelters? Does he want to be evacuated from target cities? Are the police being praised for their fairness and speed in issuing leave-the-city permits? Are illegal évacués being treated as scum and traitors and cowards?

Then go after the Propaganda Man yourself. He is your friend. You are his friend. The only enemy is the enemy Leader (or generals, or emperor, or capitalists, or "They"). How is the Propaganda Man going to hear from you? Leaflets? Short-wave—and if so, why is he listening to the enemy in the first place? Standard-wave? Speaker planes? Rumors? Get things to him that you know he will repeat, things which will interest him. Make up a list of the things he worries about each month, a list of the things which the enemy propaganda is trying to do to him currently, a list of the things your propaganda is trying to do. Do the three lists fit? Would they work on an actual living breathing thinking human being, with the prejudices, frailty, nobility, greed, lubricity, and other motives of the ordinary human being? If your list fits his real life, if your list spoils the enemy propaganda list, if your list builds up a psychological effect of confusion, gloom, willingness-to-surrender which accumulates month after month, the terrain is favorable. It is in your Propaganda Man's head.

There are no maps of the human mind, but in certain special cases sociology and psychology can provide leads which even the most acute untrained observation would otherwise overlook. During World War II, for example, Mr. Geoffrey Gorer, a British anthropologist, was able to provide character analyses of the Japanese that stood up under the rigorous analysis of experts long resident in Japan. Gorer took as base data the experience of the Japanese infant in the first forty-odd months of life. How was the baby given toilet training? how was it weaned? how was it disciplined

into the family life? how did the small child learn what it was? Gorer found that Japanese domestic life started the child out with a mixture of uncertainty and defiance—that the infant soon learned he was in a definite position in the human queue, where all above him had to be respected on the threat of immediate and condign reprisal, while all below him could be mistreated almost with impunity—that the Japanese had sad dirty little private thoughts about himself to a degree unknown to ourselves or the Chinese—that the Japanese was in adult life the inevitable fulfillment of what he had been made in infancy: arrogant, timid, insanely brave, deferential, fearful of foreigners and overtly cruel to them.

Furthermore, the Japanese identified persons, nations, or institutions as Female (peaceful, possessing enjoyments, subject to bullying) or as Male (fierce, counteraggressive, superordinate). The U.S.A. of Admiral Perry seemed Male; that of Cordell Hull, Female. These findings, applied to propaganda, gave British-American operations an audience unlike the Japanese whom missionaries, soldiers, diplomats, businessmen, and journalists had portrayed in such varied and inconsistent terms. This Japanese Propaganda Man (analyzed at a distance, since Gorer had never been nearer Japan than Indo-China) became a believable person. It was uncanny to see Japanese propaganda movies after reading the Gorer analyses, and to find the Japanese government propagandists, by hunch and instinct, appealing to the same Propaganda Man whom Gorer, by bold but permissible extrapolations, had revealed to Allied propaganda planners.

The Attribution of Motive.

One of the least factual elements in human life is motive. Motive is hard to discern, even in one's own life, and it is difficult if not impossible to prove. It must frequently be

attributed. Motive is therefore easily interpreted; "falsification" is almost impossible because no matter how much probable motive is twisted, it still might fit the case. Motive is therefore excellent material for psychological warfare. (Those propaganda veterans, the Communists, have a formula for showing that the motive of every person opposed to them is unprogressive, illiberal, and greedy, even if the person himself does not know it. Their own motives are always pure because they are "objectively" and "historically correct" according to *science*, that is, according to the historical rigmaroles of Karl Marx. The formula is a poor science, but a superb propaganda weapon.)

War eases the motive-switching operation because the leaders and people on each side derive moral exhilaration from the common effort. Ostensibly, politicians become statesmen; all higher-ranking officers become strategists; ordinary men become heroes, martyrs, adventurers. The lofty process of war is one which psychologists will not explain in our time; it transposes ordinary persons and events to a frame of reference in which individuals are less self-conscious and also less critical. Among European and American peoples, particularly, there arises the assumption that because of war men should be brave and unselfish, women kind and chaste, yet alluring, officials self-sacrificing, and so on, even though the facts of the case in the particular country involved may be very much to the contrary. The cruel futility inherent in war is so plain to all civilized men that when war does come men overcompensate for it. They set up illusions.

This need not be taken as a criticism of war or of mankind. The world would be a more inspiring place in which to dwell if people generally lived up to the wartime standards they impose on themselves. That these standards are felt to be real is attested by the distinct drop of the suicide rate in wartime, and the increase in suicide, murder, and crimes of

delinquency after every war; that the change of role is largely illusory is attested by the fact that no nation appears to have undergone permanent sociological change as a result of improvement during war. Many wartime changes carry on, of course; but they rarely comprise, by the standards of the people concerned, improvements. The upswing is genuine, when it occurs, but it is rarely permanent, and it seldom affects all levels of the entire population with the same degree of exhilaration.

The propagandist thus has an ideal situation. In the enemy country everyone is trying to be more noble, more unselfish, more hard-working. Everyone applies a higher standard of ethics and performance than in peacetime. Businessmen are not supposed to make too much money, politicians are supposed to work around the clock, officials are supposed to cooperate, housewives to save, children to scavenge, and so on. Yet a certain percentage of the enemy population is not taken into this. Sometimes minorities feel themselves emotionally excluded; at other times private temperamental differences make some persons skeptic while others remain believers. The ground is ready for rumor, for tearing down inflated personages, for breaking the illusion by the simple process of attributing normally selfish motives in wartime.

It is easier to attribute bad motives to civilian leaders than to military. The ceremonialized discipline of modern warfare makes the military figure a little mysterious; his normal peacetime obscurity shielded him and his family from exposure, cheap publicity, gossip. The civilian leader does not have this protection. The very process of becoming prominent has involved his seeking publicity, for the one part, and his pretense of avoiding it, for the other. Furthermore, the man who serves his nation serves himself. It is not possible for a man to lead a large country without benefiting himself, since the act of leadership is itself intensely pleasurable. Also, prominence possesses a

characteristic of vice; even when it loses its value for positive enjoyment it retains withdrawal pains. The once-prominent individual hates to leave prominence though he may be genuinely weary of it. He is willing to be tired of the country, but not willing for the country to be tired of him. In wartime old leaders remain and new ones come in. Fame and obscurity shift with even greater rapidity than before. The personality-politics condition of the country is highly mobile. Personalities are tense with interpersonal conflict.

Then comes the propagandist.

First, he attributes normal human motives to the leaders who so obviously possess them. In this job, he is doing what the famous little boy in the Hans Christian Andersen story did when he said of the Emperor, "Mamma, he hasn't any clothes on!" The propagandist need only say what everyone knows: that this man is notoriously fond of money; that another one has been a poor sportsman; that a third has betrayed some old friends; that a fourth has sought power in a selfish, vindictive way. The response which the propagandist seeks is a simple "That's so."

The next step in propaganda is to show that these persons do not measure up to the tragic, heroic, historic roles war has imposed on them. That too is not difficult, especially if the war is not going decisively one way or the other. Defeat or victory serves equally well to make leaders into heroes; Churchill and MacArthur were never more splendid than when they were whipped, the one after Dunkirk, the other after Bataan.

The final approach is the total discrediting of leaders. If the internal politics of the country have been bitter enough, some of the leaders may even come over voluntarily to the enemy. Quisling in Norway; Wang in China; Doriot and Laval in France; Vlassov in the U.S.S.R.; Laurel from the Philippines—such men all possessed a certain amount of standing in

their own countries but through capture, impatience, or seduction decided to continue their careers with enemy backing. The propagandist can now pretend to be tolerant. It is he who believes in peace, in reconciliation, in easygoing live-and-let-live attitudes. He describes his protégés, the quislings, in warm complimentary terms; he lightens the tenor of his attack on the non-quisling enemy leaders. He takes the attitude that war continues because of private stupidity, vengefulness, greed, unreasonableness on the other. For his part, he is willing to let the politicians, both quisling and patriot, "settle it between themselves." Let them form a coalition government.

Personal smearing is effective. If the war situation runs in the enemy's favor, the easing of the enemy position permits the population the privilege of backbiting, and even within the leader-group some leaders may feel more free to destroy the positions or reputations of the others. The impossible and foolishly heroic stances which the leaders have taken in time of strain now make most of them look a little silly. Conversely, in a downgrade situation, the leaders may gain stature in the first tragic weeks of defeat, but soon the ignobility of defeat sweeps over them all. The propagandist need only be a good reporter, and the leaders of the defeated country will provide him with good propaganda material.

In estimating the propaganda situation, the vulnerability of the leaders to personal attack is one of the major elements. Properly handled, it can be of real value. In the American Revolution, the personal character of George Washington was a very substantial asset. A. very rich man, he could scarcely be accused of a gutter revolution. A slave owner, he could not be accused of wanting the overthrow of the social order. An experienced soldier, he could not be attacked as a military amateur. A man of patience, correct manners, and genuine modesty, he was not easily described as a bloody

empire-builder, an immoral sycophant, or a power-drunk madman. British propaganda accordingly went after the Continental Congress, of which there was a great deal to be said. On the other side, the Americans had duck soup when it came to George III and most of his Cabinet—personalities which included boors, fuddy-duddies, too-little-and-too-laters, and conspicuous nincompoops.

A Written Estimate of the Situation.

If, as indicated above, the terrain of Psychological Warfare consists of the private thoughts and feelings of each member of the audience reached; if the mission of Psychological Warfare is the accomplishment of anything from entirely unknowable results (such as an imperceptible change of mood) all the way through to complete success (such as organized mass surrender); if the capabilities of the enemy have virtually nothing to do with one's own Psychological Warfare commitments; and if the decision consists of choices of means and theme—if these peculiarities all apply, the usual "estimate of the situation" has almost nothing to do with military propaganda.

Roughly speaking, this is the case. An attempt to apply the outline given in FM 101-5, Appendix I, would produce only a lamentable parody of a military document.

The *situation* of the military unit possessing Psychological Warfare facilities has relatively little to do with the *capabilities* of the Psychological Warfare unit. The morale of one's own men should have no effect whatever on the output of the radio script writers and the leaflet writers.

In combat operations, military forces *meet*. In Psychological Warfare, they do not. In combat operations, it is impossible for two hostile units to occupy the *same* territory for any length of time without both of them

degenerating into a chaos of armed mobs. In Psychological Warfare operations, both sets of operations can be conducted in the same media, can address themselves to the same basic human appeals, can use the same music, the same general kind of news account, and so on.

Furthermore, no modern army ever went into operation with certain units designated as wholly and exclusively defensive, and certain others as wholly and exclusively offensive. (The Great Wall of China is the world's most celebrated example of purely defensive planning, yet it protected Chinese offensive bases for twenty-one hundred years.) But in Psychological Warfare, the Japanese-language short-wave broadcasts from San Francisco had no imaginable effect on the American forces in the Pacific. The only people who could understand them were the Japanese-language officers in G-2 and ONI offices; their personal vexation did not matter.

The offensive operations of combat troops are predicated upon finding the enemy, effecting contact, and either destroying the enemy or making him yield terrain. The defensive operations of combat troops, contrariwise, are planned with a view to resisting an enemy who has been met.

In Psychological Warfare, operators and enemy do not effect contact. The audience cannot strike back through a radio set; the enemy reader cannot throw a leaflet back at the bomber which has dropped it on him. When American planes bombed German radio stations, they did not do so because the flight commander was trying to get German propaganda off the air; they did so because the Americans were trying to break up the entire German communications network. It is almost impossible to pinpoint radio transmitters and printing presses with such accuracy as to deny the enemy all chance of talking back. In a purely physical sense, there are only two sets of measures whereby

an actual defense can be set up against Psychological Warfare. Each is a measure of desperation; neither is considered effective; the Americans did not bother with either in World War II.

The first physical defense consists of radio jamming and of the planned interception of enemy leaflet raids. Radio jamming is ineffectual except in the case of an enemy possessing hopelessly inferior signal equipment. (The Japanese tried to jam our radio at Saipan, just as the Germans tried to jam BBC. They impeded reception, but they never succeeded in blocking it out altogether.)

The second physical defense consists of destroying reception facilities. It is possible to sweep an occupied territory and to sequester *almost* all the radio sets in use. It is possible to issue a military order that any soldier or civilian found in possession of enemy printed matter will be court-martialed and punished. These measures are useful to dictators having secret police, and among armies having the Prussian level of discipline, with the enlisted men regarded as robots. It is not to be expected that they would work against Americans.

Therefore, propaganda does not meet propaganda. Combat forces *meet*; Psychological Warfare forces pass one another in opposite directions.

In American practice, the forces which countered enemy propaganda were those pertaining to troop information and education—morale or special services. These did not concern themselves with propaganda to the Germans and Japanese. In the German and Russian armies of World War II, but not in the American, British, French or Japanese, there were *political officers* attached to the units under a variety of titles; these often took charge of propaganda to the enemy (offensive) as well as indoctrination of their own troops

(defensive), but the unrelatedness of these two functions let them split apart.

Even here, the parallel between combat operations and propaganda operations breaks down. Rarely does it occur that there is a simple juxtaposition of forces, thus:

The issue is more commonly one in which the propagandist on each side attacks those troops which are retreating, cut off, suffering heavy losses, politically disaffected, or otherwise psychologically promising material for him. Of the factors which can affect troop or enemy morale, the presence of friendly propaganda is a minor one. The result then becomes complicated:

Troops who are starving or are subjected to inordinate losses will not have their propaganda-resistance heightened by pep talks. A chopped-up unit has no means of enjoying USO facilities.

Propaganda vulnerability depends most commonly on the objective situation of the audience. If the objective situation is good or neutral, one's own propaganda can supplement the good morale conditions, but even here, it does not and should not meet enemy propaganda frontally.

In so far as it can be tabulated, the visualizable propaganda situation at any given time would be something

like this.

In each of these instances, the propaganda operators are themselves members of an audience. Furthermore, propaganda leaks, as it were, out of the channels into which it is directed. Additionally, propaganda in all countries has to compete with the normal day-to-day preoccupations of the listener—his food, his health, his hour-by-hour activities, his tangible interpersonal relationships. Save for rare moments of intense crisis, propaganda can expect to occupy only a small fraction of the audience's attention. In dictatorships, the range of propaganda can be widened by polluting all news, all theater presentations, all churches, etc., with the "Party line," but visitors to totalitarian capitals—of both the Fascist and Communist varieties—report that most of the common people have become calloused with apathy, over-all disbelief, or skepticism as a result of overexposure to official indoctrination.

Hence a written estimate of the situation follows *not* from some special Psychological Warfare situation, but from the practical measures available. If desired, it can summarize the following points:

1. DEFINITION OF THE AUDIENCE

a. Medium through which reached

- b.* Anticipated attention (including means of getting attention)
- c.* Pertinent characteristics (from propaganda intelligence report)

2. PSYCHOLOGICAL GOALS TO BE SOUGHT

- a.* Attention of the enemy
- b.* Present-goal (if strategic, opinion or sentiment; if tactical, action)
- c.* Ultimate goal (applicable to strategic only)

3. LIMITATIONS OF POLICY

- a.* National political limitations
- b.* Limitation by adverse factual situation
- c.* Limitations arising from one's own security

4. MEDIA AVAILABLE

- a.* Kind and quality of media to be used

5. THE PROPAGANDA MAN

- a.* Descriptive appreciation of a typical audience member

6. COMPETITIVE FACTORS

- a.* Listener's non-propaganda preoccupations
- b.* Continuation of adverse indoctrination
- c.* Effect of news available both to one's self and to listener
- d.* Competitive effect of hostile propaganda

7. RELATION TO GENERAL (MILITARY) ESTIMATE OF THE SITUATION

- a.* Timing relationships
 - 1. Contingency plans
 - 2. Contingency prohibitions

- b. Contribution of Psychological Warfare to operations planning
 - 1. Combat operations psychologically advisable
 - 2. Combat operations subject to propaganda exploitation
 - 3. Operations providing adverse propaganda with opportunity
- c. Correlation of Psychological Warfare with
 - 1. Public relations programming
 - 2. Information and education plans
 - 3. Medical plans and reporting
 - 4. Countersubversive functions

Such papers might be of use, gathering together in a single document all pertinent facts. In most tactical situations, the situation would have obsolesced before the author of the estimate had finished his document. In strategic situations, it could not normally be made specific enough to be practical—at the operational level—without becoming hopelessly unwieldy. Each skill represented in the estimate does prepare other reports, and the practice of most modern armies indicates that it is better to conduct routine propaganda planning, supervision, and appreciation through liaison than to prepare elaborate documents gathering together the multifarious factors which actually affect Psychological Warfare.

In most American Psychological Warfare facilities—especially in the theaters—the estimate of the situation consisted of a brief résumé of home propaganda by the enemy (taken directly from propaganda analysis), comment on the audience by appropriate representatives from the State Department or other Federal agencies, and discussion of the audience by some kind of Psychological Warfare

operations-planning and intelligence board. Some of the most valuable suggestions came from persons not concerned with propaganda—such as target-intelligence people who could anticipate enemy civilian or military shortages, or economic-warfare people who suggested vexations which the enemy listener was probably experiencing.

The Question of Choice.

An estimate of a combat situation is something like a diagnosis and prognosis in medicine. The estimate sets forth the situation, presenting the difficulties to be faced and the general range of pertinent fact, all in orderly array, like a systematic diagnosis. The plans are then drawn up in the light of the estimate; they are limited by the harsh, immediate facts of the situation; they resemble a doctor's prognosis, which may have room for several choices, but which does not open the way to speculative, creative action. Psychological Warfare situations are usually fluid, save at times of specific tactical emergency (the appeal to an enemy unit, when it is surrounded, to surrender; pre-invasion propaganda for specific points).

Therefore the psychological estimate should not be presented as a propaganda-*versus*-propaganda analysis; if it does, it will end as an unproductive and meaningless duel between the propagandists on the two sides. Nor should the estimate pretend to present choices with the pretense that these choices are definitely prescribed by the situation itself. In any field, an expert can hoax or befuddle a layman. A Psychological Warfare officer should present choices for what they really are—options open to him and his staff as creative writers. Policy issues, in specific cases, can be answered yes or *no*. This is not true of propaganda as a whole. The task of the propagandist is to create something which will arouse attention, will induce attitudes, and will eventually lead to

action. It is a task of permanent offense. Its variations are as infinitely diverse as the imaginations of mankind can make them.

Choice is perpetually before the Psychological Warfare propagandist. But it is the wide choice of what he can think up, not the narrow choice dictated by fixed terrain, by specific enemy capabilities, by concrete physical necessities. Adolf Hitler himself, in the near-delirium of his last days of life, recognized this. He told his followers to hold out; German propaganda might still provoke the "inevitable" American-Soviet clash which would save Germany. He said he would choose one side or the other—he didn't much care which. Thus, at the end, the range of propaganda possibilities deceived even the arch propagandist, despite the bold shrewdness he had shown in the past. He knew, as his generals did not, that in the realm of the psychological, the "factor of the unexpected" is always a large one, and hoped to the last to turn it to his ends. His premises were right, even though his conclusion was fatal for him.

Allied Operations.

Estimates become more complex when several nations fight on the same side.

In a particular type of instance, estimates of the antagonist's propaganda capacity form a part of normal military operations. This occurs in the instance of allied operation: when the outside ally fears that the local ally may be subverted. Such was the state of France in relation to Britain in 1940, of Central China in relation to the Americans in 1944, of the Balkan states in relation to the Third Reich in 1945. In such instances, estimate of the enemy propaganda becomes a vital part of the total military estimate. The principles stated below can be applied by changing the direction of their application. Propaganda analysis can, in

situations like this, provide cues for effective action and correct timing. In this type of situation, the outside ally cannot afford to sit by and hope for the best. By black operations he too must prepare to re-subvert the local ally if the local ally goes over to the enemy. In Rumania, Bulgaria and puppet Serbia the Germans were not successful; in Italy they created the Fascist Italian Social Republic and brought a large part of Northern Italy back into the war. In China, Allied pro-Communist sympathizers hoped that the Japanese would subvert the Generalissimo so badly that America would build up Yen-an as a precautionary measure; but the Generalissimo stood firm, and the Yen-an maneuver lingered on as an unpleasant memory between certain Americans and certain Nationalist Chinese. This type of situation mixes politics, economics, propaganda and warfare to such a degree that no sound estimate can appraise one factor without including the others.

Estimate of One's Own Capacity.

In preparing a routine estimate of one's own capacity, militarily speaking, the measurable factors of space and time provide guides for projecting plans into the future. It is possible to plan, "At 1830 hours, D day plus 8, the Smithforce will have arrived at Tenallytown," meaning that 8 days after the start, this result can be expected. Psychological warfare can be estimated in a loosely comparable way, provided the terms of reference are different.

Naturally, no sane Theater commander would rely on psychological warfare alone for the accomplishment of a military result. It is possible, nevertheless, to allow for planned good luck—good luck which one has created with many months of hard work. When psychological warfare is used in conjunction with invasion, its planned use (to judge

by the results found in World War II) might often justify commanders in using minimum rather than maximum allocations of troops for the protection of lines of communications against guerrilla or civilian attack. If the Nazis had chased the Soviet peasants through the woods with soup kitchens, free movies, and mittens for the babies, they would not have had so many furious partisans sniping at them.

Psychological warfare can be relied upon to a considerable degree to step up enemy panic in the application of a rapid forward movement. The Japanese in China panicked whole regiments of local volunteers plumb out of existence by the use of fast-marching Chinese-speaking plainclothes troops, some of whom may have been air-dropped. In the Nazi establishment of the first salient through to Abbeville, the psychological aspects of the blitzkrieg helped prevent the British and French from re-forming a continuous line and led eventually to the pocketing of the British at Dunkirk.

Psychological warfare can also be counted on, tactically, to speed up the reduction of isolated enemy positions when these positions are clearly beyond hope of rescue. All the psychological warfare people need to do is to go in with map leaflets, surrender leaflets, loudspeakers and a near-by radio. The unit may not give in instantly, but the unit would be superhuman if it fought as well in the face of persuasion as it would have fought without psychological attack. In the mopping-up of Japanese in the Pacific island fighting, psychological warfare teams and techniques undoubtedly eased and speeded the process.

These references are to tactical estimates. Strategic propaganda is beyond estimate. All it can do is to weight the probabilities a little more favorably than would be the case without it. If the United States had not dropped the Japanese surrender proposal in Japanese all over Japan, the Japanese government leaders might have been more inclined to resist

surrendering. If the Germans had not softened up the French before the Great Western Blitz of 1940, they might have needed more time, days or weeks more to reduce France, and thus might have faced a united French overseas Empire even after France-in-Europe fell. The success of a strategic propaganda operation cannot be guaranteed in any plan. It would be foolhardy optimism to think that psychology can assume a major portion of responsibility for direct military results. It would appear that the Soviet Red Army, despite its propaganda-conscious Communist background, never passed the whole buck to psychological warfare. The Russians never appeared to leave the artillery at home in order to take the loudspeakers or leaflet mortars along. They made brilliant, almost terrifying use of pre-belligerent propaganda; they used propaganda tactically with immense success in the taking of prisoners; they used psychological warfare, with a heavy infusion of political warfare, more drastically for consolidation and occupation purposes than did any of the other United Nations. But like everyone else, they seem to have used strategic propaganda for whatever it might bring in—immediate generalized effect, and the ultimate production of windfalls.

Tactical psychological warfare can be estimated, though to a limited extent, as part of a tactical potential of either the enemy or one's own side. Strategic propaganda can be planned and evaluated only in terms of the diffuse general situation, with the reasonable and fair expectation that if properly employed it will better the position of the user. It sometimes achieves results which astound even the originators, but these results cannot be calculated (except by hunch) in advance. Nevertheless, the operation is well worth trying since it has incalculable possibilities and is quite inexpensive in relation to the gross cost of war.

PART THREE PLANNING AND OPERATIONS

CHAPTER 10 Organization for Psychological Warfare

Big jobs require big organizations. Eight *billion* leaflets were dropped in the Mediterranean and European Theaters of Operations alone under General Eisenhower's command. That is enough to have given every man, woman and child on earth four leaflets, and this figure, large as it is, does not include leaflets dropped in all the other theaters of war by ourselves, our allies, and our enemies. It does not include the B-29 leaflet raids on Japan, in which hundreds of tons of thin paper leaflets were dropped. Huge American newspapers were developed, edited, printed and delivered to our Allies and to enemy troops. One of these, *Parachute News (Rakkasan)*, attained a circulation of two million copies per run; this was in the Southwest Pacific. In parts of the upper Burmese jungle and the Tibetan borderland where no newspaper was ever distributed before, the Fourteenth Air Force distributed a Japanese newspaper, *Jisei*, along with picture sheets for illiterate tribesmen.

In getting at the enemy, the United States printed leaflets, cartoons, pamphlets, newspapers, posters, books, magazines. In black operations enough fabrications were perpetrated to keep the FBI busy for a thousand years. Movies in all forms (commercial, amateur, all known widths, sound and silent, even lantern slides) went out all over the world. Radio talked on all waves in almost every language

and code; loudspeakers, souvenirs, candy, matches, nylon stockings, pistols you could hide in your mouth, sewing thread, salt, phonograph records and baby pictures streamed out over the world. Much of this was necessarily waste. In the larger waste of war it appears almost frugal when taken in relation to the results thought to have been achieved.

Every American theater commander, given the choice of using psychological warfare or not, as he chose, did choose to use it. Every major government engaged in the war used psychological warfare, along with a number of assorted private characters, some of whom later founded governments. (The sacred government of the Dalai Lama, in forbidden Lhasa, undertook a neat little maneuver in limited overt propaganda when it printed a brand-new set of stamps for presentation to President Roosevelt; the Inner Mongols were propagandized by the Outer Mongols; the Grand Duchy of Luxembourg broadcast against the Reich.) Psychological warfare proliferated so much as to change the tone if not the character of war. General Eisenhower wrote, at the end of the European operations, that psychological warfare had developed as a specific and effective weapon of war.

The organization of psychological warfare was as much a problem as the operation. It overlapped military, naval, diplomatic, press, entertainment, public relations, police power, espionage, commercial, educational and subversive operations. Almost every nation involved had extreme difficulty in fitting these new powers and unknown processes into the accepted frame of government, and almost every national solution was different. The British and the Japanese achieved a considerable degree of unification. The Americans, Nazis and Russians were hampered by the number of competing agencies. The French were burdened through most of the war by an excess of governments. The Chinese did things in their own formal but offhand manner; the Nationalist party carried on information functions for the

Chinese government, while the Communist guerrilla authorities carried on functions for the Communist party.

Figure 39: Leaflet Production: Military Presses. The machines shown are Davidson presses, widely used by the Americans in all theaters of war. The unit shown is Psychological Warfare Branch during the Leyte operations. The leaflet being run off is addressed to both Filipino guerrillas and Japanese troops, facilitating a difficult three-way operations whereby Japanese are told to surrender to Filipinos, Filipinos told not to kill surrendering Japanese, and Americans instructed to receive prisoners from Filipinos.

Figure 40: Leaflet Production: Rolling. When round bombs were used, the leaflets had to be rolled into round packages to fit. Forty thousand leaflets could be packed into one bomb, and a Mitchell bomber could carry seventeen such bombs. (Photo by Ninth Air Force Combat Camera Unit.)

Figure 41: Leaflet Distribution: Attaching Fuzes. Packaged leaflets must spread out. Bundles of paper which fall intact make little impact on the enemy unless they hit him on the head. Their subsequent employment is rarely related to propaganda. To be effective, leaflets must scatter. World War II saw the adaptation of various scattering devices, of which the most effective was the barometric fuze, shown here. The others included self-timing packages, slip-strings which unwrapped the package in the air, and a belly-tank which fed leaflets out at any desired speed, either in a continuous stream or in bursts.

The lower down the echelon, the nearer the armies of the world came to standardizing psychological warfare organization. They did this for the same reason that they all organize into regiments instead of centuries, cohorts, or tribes. Modern war is a self-standardizing process if the enemy experience is to be copied, enemy techniques improved, allied assistance accepted, and military practice kept up to world standards. Psychological warfare units needed printing and radio sections; to service these sections they all needed intelligence and analysis offices; to distribute their materials they all needed agents and liaison. Black propaganda organization varied more than did white, but it was amazing to Americans, uncovering Japanese subversive-operations units, to see how much the Japanese organization resembled their own.

Figure 42: Leaflet Distribution: Packing the Boxes. Sometimes boxes were used instead of bombs. These, being square, facilitated the packing process, since the rectangular packages could be used just as they came out of the printshop. The fuze is attached to the package, not to the box.

Figure 43: Leaflet Distribution: Loading the Boxes. Boxes were built to fit the bomb bays. Boxes were opened, one after the other, by a trip lever, shown above at left. Each box can be emptied in turn, giving the pilot the opportunity to select more than one target.

Figure 44: Leaflet Distribution: Bombs at the Airfield. Leaflet bombs, filled with rolls such as those shown in [figure 40](#), are delivered to the bomber. The scene shown is somewhere in England. Officers and men picked up British slang for leaflet operations, and called such missions "nickelling."

Figure 45: Leaflet Distribution: Loading the Bombs. The bombs were loaded as shown. The entire bomb dropped out of the plane and was disintegrated in the air by a small explosive charge. No illustration can do justice to the sight of such a bomb in the actual dropping, since the leaflets tend to look scattered or to disappear under normal flight conditions. Army motion picture films preserve the process for the official record, however.

Figure 46: Leaflet Distribution: The Final Result. Search of prisoners provided a fair, accurate test of how the leaflets took effect. Sometimes surrender leaflets actually came to have black market value. Enemy officers prohibited the carrying of Allied surrender leaflets, since they knew that a soldier who had one in his pocket or hidden in his clothes was halfway or more through the psychological process of surrendering. Here a German hands in a leaflet to his American captor.

National Propaganda Organizations.

At the national level, the psychological warfare facilities were parts of their national governments. Neither the Axis nor the United Nations developed super-national psychological facilities. The closest thing to international agencies were the American-British coordination facilities under authority of the Combined Chiefs of Staff, along with that mysterious force which in the latter part of the war impelled Russian-occupied countries to sound amazingly much like Moscow. Short of preparing a textbook for political science study, explaining each of the governments and the location of its intelligence and informational functions, it would be impossible to explain in any detail how each of the systems worked. Even between governments having the same general political orientation, the improvised war agencies were different, and in the same government, the practices of World War I were not carried over into World War II. Some description of the American psychological

warfare may be warranted, chiefly as a means of showing how a simple task can be accomplished even with intricate and confused organizations, and the Japanese system (on paper, the best of them all, though weak in field operations and control) may be outlined for the sake of contrast.

Figure 47: Consolidation Propaganda: The Movie Van. Consolidation of friendly, neutral or hostile civilians in an area of operations can become a vitally important function. During the North African operations, this movie van showed newsreels and documentary films to the local people. Similar vans were used in Italy, France, Holland, Belgium, Germany, Austria, and other areas.

American Psychological Warfare Agencies.

The American Army failed to establish its authority and leadership in the field of psychological warfare despite its creation of the Psychological Warfare Branch under G-2. In large part this was a matter of practical politics and of personalities. The United States government as a whole, in the successive administrations of President Roosevelt, acquired tremendous administrative vitality but at the same time permitted the older "constitutional" agencies to lose ground to their newly founded rivals. Had an administrative purist and traditionalist been in the White House, instead of a bold governmental experimenter, the logical creation of a psychological warfare facility would have paralleled the later

creation of SWNCC (State-War-Navy Coordinating Committee).

From the purely theoretical standpoint, it would have been far sounder to put national policy formulation (White House and Congress), foreign policy formulation (State), strategic propaganda (State, War, Navy) into a single administrative entity than to create a new federal agency with improvised procedures, improvised security, and an improvised staff. However, the State, War and Navy Departments (at the very opening of our war) were overworked and understaffed. Many of the senior personnel regarded psychological warfare with downright suspicion and propaganda was regarded as a dirty name for a dirty and ineffectual job. Hence the old-line agencies let pass the opportunity for establishing initial control.

Figure 48: Consolidation Propaganda: Posters. An American soldier pastes American posters over Nazi ones while a French crowd looks on. (The crowd is pretty typical as to size and content, but a thousand such crowds will cover an entire town.) The poster operation shown was conducted by Psychological Warfare Division of SHAEF. (OWI-PWD photo.)

Subsequent experience suggests that the use of existing facilities and existing agencies wherever possible instead of new ones imparts stability, discipline, and morale, and lowers the organizational friction common to all new

political agencies, especially to instrumentalities in so controversial a field as propaganda. On the chart shown, for instance, it would not have mattered whether the Psychological Warfare Facility (whatever its name) were put for housekeeping purposes under the State, War, Navy Department, or the Office for Emergency Management. The essential requirement would have been to use State Department men for jobs that involved determining foreign policy, military men for tasks of a military nature and naval for navy work, and to recruit only after cadres had been established. The sponsorship of psychological warfare by one—any one—of the old-line departments might have slowed down the feverish tempo of reorganizations, quarrels, cabals, internal struggles for power and clashes with other Federal agencies which were so characteristic of OWI and its colleague organizations.

Figure 49: Consolidation Propaganda: Photo Exhibit. When newsprint is short, a photo exhibit has great appeal to civilians. In backward countries, people sometimes waited their turn to get a chance to see the American pictures. Even in Cherbourg, the French city shown, these passersby are showing a very real interest in the picture display.

The actual conduct of psychological warfare was shown in [Chart I](#). (No official authority exists for such a chart; the author bases it on his own observation and experience.) Only agencies themselves originating psychological warfare

materials are shown. Relationships between State, War and Navy were stable, but were frequently by-passed; for example, the Zacharias broadcasts, which were our biggest political warfare experiment, did not go to the State Department until after they had started. Relationships between OSS and other agencies were erratic and cloaked in extraordinary but irregular security. The OWI ran for most purposes as an autonomous group, with occasional reference to State, Navy, and War Departments. The President in his individually official capacity was apt to improvise psychological warfare operations of high importance, without warning his subordinates of what was coming (paper knife made of human Japanese bone; the "unconditional surrender" formula). The White House staff sometimes worked through channels, sometimes not; the Harvard professor who advised on inflation was simultaneously involved with psychological warfare on continental Asia. The Secretary of the Treasury openly discussed what *he* would like to do with Germany in terms which the Nazi radio naturally conveyed to its own people. Within the OWI itself, the overseas operation was separated from the domestic, the broadcasters from the planners, the outposts from everybody else, during much of the war.

But the job was done!

Success was not due to the formal structure of the Office of War Information (see charts [V](#), [VI](#)). No administrative formula could have transcended such governmental confusion. It was owing to the fact that all the people just described—who went around, with the best will in the world most of the time, minding one another's business—did in the end achieve effective results. The common denominator behind them was not the authority of the President, the discipline of the Democratic Party, or the casually designed, casually overlooked formal lines of authority. The common denominator was American civilization itself. Had we been

deeply disunited, this ramshackle structure would have collapsed into chaos. But there was broad concurrence, a sense of cooperativeness, good will and good temper. A German, Russian or Japanese bureaucrat would have gone mad in the wartime mazes of the Federal system; a Chinese would probably have felt very much at home, but would have polished up the titles and honorifics a little.

The difference between our governmental organization and that of our enemies lay in the fact that to us the T/O were something that could be used when convenient, and could (without breach of faith or law) be short-circuited when convenient. Word was passed around, material exchanged, coordination effected in ways which could not be shown on any imaginable chart. It was neither a merit nor a defect, but simply an American way of doing things.

This characteristic has the effect, however, of making after-the-fact studies quite unrealistic. There is not much from the formal records and the formal charts which conveys the actual tone of governmental operations in terms of propaganda. Study of World War II organization for the sake of research and planning against possible future war would not be very profitable unless it delved into the concrete experience of individuals. The formal outlines mean nothing; they are positively deceptive unless the actual controls and operations are known. (Mr. Warburg makes it plain in his book that he thinks little of Mr. Elmer Davis' conception of his job; but he does not mention that Mr. Sherwood, theoretically Mr. Davis' subordinate, ran foreign operations without much reference to Mr. Davis or to any other part of the Federal government. Since Mr. Sherwood was closer to the White House than was Mr. Davis, this important consideration escapes being recorded on the chart: foreign operations were actually autonomous.³⁵) Examples of how things really worked—as opposed to how they looked as though they worked—could

be multiplied forever; but the soundest way of finding out sober, judicious opinion will necessarily await the writing of autobiographies and memoirs by the people concerned.

With these sweeping reservations in mind, it is worth noting the organization of OWI (internal). The Domestic Operations Branch can be dismissed with brief mention. It proved to be the object of profound suspicion on the part of many members of Congress, and its function was to stimulate and assist inward media of public information in support of the war effort. The Domestic Operations Branch never superseded other U. S. government informational services (State, Agriculture, Treasury, War, and so on), so that it was the wartime supplement to the governmental supplement to the regular news and information system, which remained private. This precluded intimate coordination of domestic and overseas propaganda and rendered illusory any hope that domestic propaganda, as eavesdropped by our enemies, could be used as an instrument of war.

The Overseas Operations Branch had two basic missions. Within the United States it was the operating and controlling agency for government-owned or government-leased world-wide short-wave. For actual overseas purposes, it was the rear echelon of both the Navy and Army theater facilities and of its own OWI Outposts. The Outposts were themselves under OWI for certain purposes; for other purposes they were subject to the chief of mission (ambassador, minister or chargé) of the U. S. in the foreign country, and still other purposes under the American military commander having local jurisdiction. (OWI-Delhi, for example, was under the office of the American High Commissioner in India; also under the Rear Echelon Headquarters of the Commanding General, United States Army Forces, China-Burma-India Theater; also under OWI-New York for supply of its printed materials, most personnel and needed presses; under OWI-

San Francisco for supply of its wirelessly news; and under OWI-Washington for general policy, hiring and firing, and everything else.)

In terms of its own global radio, OWI prepared planning and control materials in Washington and relayed these to New York and San Francisco. The radio facilities in these cities then transmitted the material overseas. Through the first three years of the war, the precise nature of the Washington controls was in question, enforcement remained a perplexing problem, and coordination between planning and execution remained unsolved in part. By the spring and summer of 1945, OWI had solved most of these problems, chiefly by means of circulating the Area I, II, and III chiefs to the operating offices. When personal relations were satisfactory (as in the instance of Mr. Owen Lattimore, chief in OWI San Francisco, Mr. George Taylor, chief of Far East in Washington, and Mr. F. M. Fisher, chief of China Outpost in Chungking, all of them China experts) coordination might be difficult but was never exasperating.

Chart V (Source: OWI administrative memorandum. Courtesy of Dr. E. P. Lilly.)

that particular topic. (When the author was in China, he found that the OWI China outpost decoded its week-to-week propaganda instructions only after they were hopelessly obsolete; they were then filed.) The theaters were able to use psychological warfare as and when they pleased. Between the ETO and Washington close politico-military coordination was possible. Between Washington and the others it was impracticable.

The War Department participation in the control and planning of psychological warfare is shown by [Chart VII](#), which represents the situation as of 1945. The Propaganda Branch, attached to G-2 as a staff agency and not to Military Intelligence Service as an operating agency, served to carry out the psychological warfare functions of the War Department.³⁷ The Chief of the Branch represented the Joint Chiefs of Staff at OWI meetings, along with his Navy confrère; he took care of official messages to the Theaters pertaining to psychological warfare matters, and his office itself performed a few limited functions. (One of these functions required the author to get up at four-thirty mornings in order to digest the overnight intake of enemy propaganda. He was joined in this by Teheran-born, Columbia-trained Edward K. Merat. It was with real relief that he saw the Nazi stations go off the air. He was then able to pass the early-bird business to his Persian colleague.) The Branch also made up propanal studies whenever these were warrantable at the General Staff level. The Deputy Chief (Air) was the vestigial remnant of a short-lived Army Air Forces propaganda establishment; he had direct access to the air staff, and took care of things having a peculiarly air character. (The abbreviations under Theaters are explained below, on page [187](#), since Theater nomenclature for psychological warfare was never standardized.)

under the abbreviation OIC (Office of International Information and Cultural Affairs), it was coordinated on January 1, 1946, with preexisting State department offices and with certain leftovers from the Office of Inter-American Affairs (OIAA). It retained the global broadcasts on a limited budget; it still served the surviving outposts, which were being integrated with diplomatic and consular offices overseas; and for Korea, Japan, Germany, Austria, and Venezia Giulia, it acted as the supplying service for the Military Government information programs in those areas. The Bureau of the Budget took over limited domestic functions when the OWI passed out of independent existence on 31 August 1945.

The *Joho Kyoku*.

Comparison of this United States system with the Japanese Board of Information (*Joho Kyoku*), as outlined in [chart VIII](#), shows the difference between integrated and disparate systems. The Japanese developed a close-knit system which combined public relations of both army and navy, all domestic government publishing, complete control of book-publishing, magazines, press, radio, and film, propaganda intelligence and over-all psychological warfare. The progress of an item through the Japanese psychological warfare system may look intricate when followed on the chart, but it was in fact much less intricate than the comparable American processing of an item.

Chart VIII (Source: Chart prepared before VJ-day in Propaganda Branch, G-2.)

The only aspect of psychological warfare that does not show on the chart is the Japanese political warfare system—by the test of success, the best developed by any belligerent during World War II. The Japanese very early learned the simple rule: *Political warfare cannot convert a sub-subsistence economy and government into a satisfactory system, but political warfare can convert a subsisting area into one that has the illusions of prosperity and national freedom.* To succeed in the face of economic difficulty, political warfare must be shrewd, simple, insistent, and backed up with a touch of terror. The Japanese moved into the Western colonial areas of the Far East between 1940 and 1942 (Indo-China, Malaya, Indonesia, the Philippines, parts of China, Burma, and areas inhabited by substantial Indian minorities). They organized the following "independent" governments:

- The Imperial Government of Manchukuo;
- Federated Autonomous Inner Mongolia;
- The Reorganized National Government of China, superseding earlier puppets;
- Malai (under Japanese military control but promised ultimate independence);
- The Republic of the Philippines;

The Empire of Vietnam (later the Vietnam Republic);

A dictatorship in Burma of the Adipadi;

Republic Indonesia;

Azad Hind (Free Indian government-in-exile) and the Azad Hind Fauj (quisling Indian National Army, which put large forces into the field against British-controlled Indian troops and helped to neutralize the entire military potential of India);

The independent Kingdom of Cambodia (made independent by telling the helpless King that he need not let the French come back).

These Japanese-sponsored governments flew their own flags, had enough troops to help Japan police their home areas, developed psychological warfare facilities with intensive Japanese assistance, and went through all the motions of independence. In 1944, some of them even held an international conference at Tokyo, thanking Japan for liberating all the non-White States and adopting high-sounding resolutions. (The Siamese puppet ambassador to this meeting had the unforgettable name of His Excellency, the Honorable Witchit Witchit Watakan!)

Behind the pageantries of Japanese political warfare, economic and social realities were horrid. The Japanese printed money which had far less backing than cigar store coupons. They bankrupted all non-Japanese business so that Japanese carpetbaggers could buy their way in cheap; businesses owned by white foreigners were expropriated out of hand. They cut off communications, spread terror, raised the price of food, put hospitals out of business, degraded schools—and received the devoted loyalty of large parts of the cheated populations. It did not matter to millions of Burmese whether they had lived well under British rule or not; the British did not let them have their

own flag, did not let them send ministers and ambassadors, did not let them run a scow up and down the river with a mortar on it, calling it a navy. The *miranda*, the pageantry of politics, was what mattered—not law-and-order, democracy, security, education, health.³⁸

The same story might have been repeated on a larger scale throughout the Far East, perhaps ultimately leading to something like Lothrop Stoddard's old nightmare, *The Rising Tide of Color*. Countervailing factors included the presence of Chinese agitation both Kuomintang and Communist in leadership, guerrilla operations throughout Southeast Asia, and the ruinous economic effects of American submarine and Fourteenth Air Force anti-shipping operations. Shipping losses drove the Greater East Asia Co-prosperity Sphere below subsistence level and created a condition where even the most fanatic patriot realized the disadvantages of the situation.

The Japanese put all the captured radios to work. They had traitors of all kinds on their side—including, it is shameful to admit, Americans, Russians, British, Australians, and French. (Despite the fact they occupied all of Guam, they never used a single Guamanian traitor—testimony to the simple loyalty to the U.S. of the Chamorro people and to the popularity of the long-established U.S. naval government on the island.)

Japanese psychological warfare failed because the real warfare behind it failed. The Japanese could not whip their over-docile troops into a fighting frenzy without allowing those troops to behave in a way which made deadly enemies for Japan among the peoples she came to "liberate." The Japanese did not have sense enough to be satisfied with 100% return per year on their money, but wrecked the conquered economic systems with inflation, poor management, and excess exploitation. Even the

quislings became restless under the poor occupation policies of the Japanese, and before the war was over a considerable number of the Japanese quislings re-quislined back to the United Nations side.

Theater Psychological Warfare.

The Japanese had superlative close-knit psychological warfare staff organization within metropolitan Japan. They possessed many first-class field operators, first among them the true-life master-mind Major General K. Doihara, whose dinner guests often woke up the next morning with bad hangovers and high treason on their consciences. But the Japanese did not have adequate channels of communication, supply, and control between their smooth system at the top, and the working propagandists at the bottom. The *Kempeitai* (military-political gendarmerie) structure got in the way; Japanese propaganda lines lost touch with the strategic realities of their slow defeat. They did, instead, what any propaganda system does on the downgrade; they turned to repression instead of counterpropaganda with the inevitable result.

In contrast, the American psychological warfare structure included Theater operating units, usually called PWB (Psychological Warfare Branch), although it became PWD (Psychological Warfare Division) in SHAEF and did not grow beyond TPWO (Theater Psychological Warfare Officer) in China Theater. The supreme authority was, of course, the Theater Commander, on whose responsibility the operation had to be carried out. When propaganda bungled and got into the field of political trouble, it was the Theater Commander and not the subordinates who took the blame. Every theater was under the command of a general, except for Central Pacific (under Admiral Nimitz, and he used an Army colonel as his propaganda chief). In most theaters, the

Political Adviser was the buffer between psychological warfare and the commander himself; in Southwest Pacific and later the Headquarters of the Supreme Commander for the Allied Powers, Japan, General MacArthur instituted the office of Military Secretary and made this officer responsible for reporting to him personally the developments in the propaganda field.

Subject to local variation, the Theater agencies faced similar problems. They had to serve in turn as a rear echelon to service the needs of combat propaganda, while working as the actual operating agencies for the bigger radio programs and the preparation of strategic leaflets. As the areas behind them became more consolidated, displays and films took their place beside news and leaflets as chores that had to be performed. Communications facilities were a problem. Purely military facilities could not, of course, be overloaded by the lightly coded transmission of hundreds of thousands of words of political and other news and guidance; the psychological warfare establishments had to jerry-build communications facilities out of what they could borrow from Army, or obtain from OWI supplies in the United States, or buy locally.

In most Theater organizations, the chief was a military man and the staff was partly military and partly civilian. Under General Eisenhower, PWD was not only Army and OWI but included OSS, on the American side, along with British partnership, French participation, and other Allied personnel as well. Under General MacArthur, OWI participated under strict Army control. Under General Stilwell, no Theater organization as such was set up; the G-2, the Political Adviser or the General himself handled propaganda matters when they turned up. Under General Wedemeyer, there was a Theater officer. Under General Sultan, the OWI ran itself; the Outpost serviced the Theater. Under General Clay, Information Control Service, OMGUS,

became an integral part of military control. The same thing happened in General MacArthur's reorganized PWB—an organization termed CIES (Civil Information and Education Section) had the organization and personnel not only of the American structure, but the usable purged parts of the *Joho Kyoku* obedient to its command and liaison. Other Theaters had comparable arrangements, each suited to the Theater.

Figure 50: Consolidation Propaganda: Door Gods. One of the most unusual consolidation propaganda operations was the distribution of "door gods." These were small good-looking posters which traditionally displayed figures from the Chinese Pantheon. During the war, farm families who had been accustomed to putting up new door gods each lunar New Year found that they could not afford them. China Division, OWI, then run by F. M. Fisher, Richard Watts, Jr., Graham Peck, and James Stewart, made up new door gods which showed American aviators, thus familiarizing the Chinese peasantry with our insignia and preaching the cause of inter-Allied cooperation.

G-2, War Department General Staff, himself at home. G-1's usually kept out of the way of psychological warfare and the housekeeping of the units was in most cases autonomous.

Responsibility for financing psychological warfare was never established as doctrine. The State Department kept most of it off its budget, leaving the actual payments up to the War Department and the OWI to figure out. Oftentimes this resulted in a curious sort of neo-capitalism within the U.S.-owned socialism of the Army. The two agencies would hold on to property as though it were private property, on the basis of immediate title, without reference to the plain fact that all of it was paid for in the end by the United States Treasurer. (OWI once murmured threateningly about bringing its radio material home from Manila rather than let General MacArthur's people highjack it. Such talk ended when the material was declared surplus or stolen.)

Field Operations.

Field operations were most highly developed in the Mediterranean and European Theaters of Operation. Combat propaganda units came into being, carrying fully equipped mobile radio stations, and high-volume printing presses, along with them. Later, under SHAEF, these units developed further and Army-level organizations were set up which duplicated the Theater organizations on a reduced scale. (See [Chart IX](#) for chart of an Army unit.)

The tactical leaflet (page [211](#)) came into its own with such units. It was possible to develop high-speed routines for using intelligence swiftly. Maps were dropped on the enemy in unfavorable situations. Order of Battle became highly important for psychological warfare purposes when enemy units could be addressed by their proper unit designation or by the name of their commanders. Intelligence was brought

into play: bad food, bad supply, poor command, or mishandling of enemy forces in any way brought prompt propaganda comment.

Radio was the least useful for tactical operations simply because enemy troops do not carry private portable radio sets around with them. Radio was of high value in consolidation operations, passing along instructions to liberated populations, and telling civilians in the line of approach about measures which they could take for the common benefit of themselves and of the Allies.

A constant problem, never completely ironed out, was the use of airplanes for dropping purposes. The leaflet producers had, in all Theaters, a tendency to prepare excellent leaflets, bale them, and send them along to the airfields in the expectation that an overworked, unindoctrinated air force staff would automatically pick up the leaflets, develop dropping mechanisms, pack the leaflets into planes, take them out and drop them to the right language-groups at the right time in the right place. This was of course as absurd from the aviators' side as it was, to the civilians, to let their brain-children accumulate in hangars or warehouses. For strategic droppings, systematic arrangements could be made through proper official channels, and a regular air operation detailed to do the job. Tactical dropping did not allow enough time for elaborate staff work in each instance, and recourse was had to psychological warfare liaison officers (either Army officers or civilians with the approximate status of Tech-rep, technical representative, a familiar sight on World War II airfields) to get in touch with the units, help them install dropping facilities, explain the leaflets to the actual pilots and bombardiers, and thus obtain a high degree of cooperation. In almost every theater, this policy succeeded, and a wide variety of leaflet bombs, leaflet dispensers, and other leaflet-circulating gadgets was developed.

Artillery distribution also played a significant part. For front-line situations artillery could do the job better than planes, without risking aircraft in a quasi-combat operation. Leaflet bombs of considerable scope appeared, and could be made to fit almost any appropriate weapon. Circulation was also effected by means of clandestine operations to friendly civilians, frequently combined with air-drop of weapons, medicine, and other essentials.

The organization of all these new functions has changed military organization. A whole new series of units were attached in echelon, each fitted to the appropriate level for its work. The rear-area functions and strategic propaganda work always required a considerable proportion of civilian aid, since some of the best workers in this line were persons who either did not wish to join the Army or whom the Army did not wish to have join it. These psychological warfare organizations were unbelievably cheap, even if measured by the most conservative estimates of their success. It is impossible that the army of the future, whether American or foreign, will overlook this source of assistance. Psychological warfare nowhere replaced combat, but it made the impact of combat on the enemy more effective.

CHAPTER 11

Plans and Planning

With most military planning, it is feasible to work from the top down, define the strategic objective and then work out the actual requirements of the operation in advance. This is not true of psychological warfare.³⁹ The objectives may be defined, and in the process of definition the general needs of a propaganda agency may be clarified. If a plan calls for a press or a radio, somebody can requisition a Davidson Press

or a Hallicrafter radio and get ready to use it. But the plan cannot define goals, set time limits for the achievement of the goals, relate the goals to one another in a scheduled pre-fixed program of success, establish terms whereby psychological victory can be told from psychological defeat.

Psychological victory exists only in terms of the military victory which it is designed to assist. Psychological defeat, no matter how much critics or the enemy propagandist may allege it, can be proved to exist only when an actual defeat makes it real. Psychological plans are always contingency plans for the assistance of military operations. They are dependent on the military operation and they cannot be checked against fact except in terms of the military operations they ostensibly support.

Unfortunately, they were not always written with these reservations in mind.

Needs of the Operator: Materials and Guidance.

American officers, assisting foreign troops, could not plan logistics until they found out what the foreign troops actually required. How much did they eat, and what? How much could they carry, and for how long? How much tonnage had to be sent them, and how often? Such questions had to be asked about the needs of the individual men before unit planning, not to mention national planning, became possible at all.

Similarly, in psychological warfare, planning can be made realistic if it starts with the individual operation for the control of which the planning is done. Define the operator as anyone having a task in the actual preparation, production or transmission of propaganda materials, whether through electric communications or by print. The operator is not usually a person with a high security classification, yet he

plays his indispensable part in fulfilling the highest and most secret strategy of the war. How can a plan be written that will be useful in carrying out the actual (and highly secret) strategy of the war while meeting the needs of an inexperienced individual way down at the bottom of the control system? The answer is, of course, that no such plan can be prepared. Different plans are needed for successive phases.

The operator needs simple but basic materials. If he is a producer of some kind—such as a creative writer, an artist, a singer, a program arranger, a newscaster who does his own scripts and so on—he is likely to be a person with ideas of his own. Individual creativeness cannot usually be turned on and off like a faucet. Low-ranking and disciplined though the hired writer may be, he is still subject to the inward frailties of authors if he is any good. (This particular author sympathized deeply with some poor American Japanese who were given unbelievably dull outlines and told, "Turn this into exciting Japanese material! Give it pep! Make it rock them off their *tatami*! But don't get away from that outline one damn inch!" The *nisei* rolled their eyes; they did a poor job, as they knew that they would.)

The person who has to be told day in and day out how to operate is no operator at all. Psychological warfare is no place for unsuccessful short-story writers or would-be radio commentators. It demands professional standards, and it has more than professional difficulties. Therefore what the operator needs is not technical instruction but general guidance.

He must be told what he can say, what he cannot say. He should whenever possible be given some reason for perplexing or cryptic instructions. He should be helped to become familiar with what we are trying to tell the enemy. There is nothing classified about that, since the enemy is to

be told it as soon as possible. The guidance given the operator should be:

- (1) Plain.
- (2) Feasible. (This sounds superfluous, but was not so during World War II when operators were sometimes told to attack such-and-such an enemy institution without referring to it directly or indirectly.)
- (3) Organized. (The material at OWI was not organized until the last several months of the war, with the result that hundreds of thousands of words of propaganda commands remained in force, technically, but un-indexed and arranged only by weekly form.)
- (4) Specific in showing timing. (General controls should not be issued at the beginning of operations; when revised, the revision should supersede the revised section, and not be placed beside it. Other provisions should be given expiration dates, after which they pass out of effect.)
- (5) Mandatory. (Control should be expressed in *do* or *don't*; personal advice is better conveyed through informal channels.)
- (6) Non-security or low-classified. (This material, for the operators, should be accessible to the operators. Often the most important operator—the best newsman, the most effective leaflet artist—may be a rather doubtful citizen, an alien, or even an enemy volunteer. He cannot follow guidances unless he knows them, and it makes a farce of security for his superior to be able to tell him the guidance, so that he can memorize it, but not able to give him the document itself.)

These rules, though simple, are not always easy to follow. Here is an example of a bad guidance:

CLASSIFIED

Without superseding instructions concerning religion, we may use the occasion of the Sacred Banyan Tree Festival to needle the Provisional President. Make a dramatic story of the President's life. Undermine his use of religion to bolster the dictatorship.

Caution: do not mention religion. Do not indulge in scurrilous personal attacks. Material concerning our information of the President's biography is highly classified and must not be used.

The exaggeration may seem apparent, but it is a fair sample of the worst directives as actually issued and many, though not quite so bad, were near it. The same guidance in more acceptable form would read:

UNRESTRICTED

(Expires 24 September, week following Festival.) Standing instructions make Banyan Tree Festival difficult topic with which to deal. If operators can suggest means of referring to Festival without violating prohibitions against religious offense, encourage them to try. Monitoring and diplomatic sources show that Provisional President is utilizing Festival to consolidate his position. If he can be attacked, do so.

The other need of the actual operator is material. The script writer needs actual texts of everyday enemy speech in order to keep his slang and idiom up to date. The artist needs correct photographs of enemy cities in wartimes so that the leaflet picture he makes will not look as outmoded as a crinoline or a Model T. All of them need all the information they can get about their own country—good handbooks, dictionaries, elementary histories, textbooks in fields which they may not know. It is amazing how hard it is to explain America to foreigners; the American soon finds out how little he knows his own country, and needs information about his own background along with current materials concerning the enemy.

Where radio propaganda is in question, the script-writers and broadcasters will read the enemy radio propaganda if they do not get enough fresh non-propaganda material

concerning their audience. Sooner or later this will degenerate into alternate soliloquies of the radio men on each side, each watching the other to see if he got a rise out of him last time. OWI people frequently expressed idiot glee at having made Radio Tokyo frantic. The OWI men were the first to admit that their glee was pointless, since it was the Japanese broadcaster and not the Japanese audience who responded. But for lack of current information about the enemy the propagandist will refer to his own professional opponent. There is, of course, a very substantial difference between a change in enemy propaganda occasioned by a real inroad which one's own propaganda had made in enemy opinion, and a change that consists simply in angry or smart backtalk. Finding that difference is the responsibility of propanal, not of the operator.

Pre-Belligerent Planning.

Pre-belligerent planning differs from regular planning in that it does not have the substantial context of actual military operations to make it realistic and urgent. Like all plans, the pre-belligerent plan should enumerate the facilities available, the basic course of action to be followed, and the limits within which offensive propaganda will be permitted. In fairness to the planners themselves, as well as to the authorities who will fit this plan into related military, economic, or political plans, the plan should define the proper scope of propaganda as applied to the contemplated situation.

One of the most useful functions of the pre-belligerent plan lies in the periodic exercise which it gives in propaganda discipline. Information and intelligence agencies frequently see their jobs so technically that they lose sight of the need for coordination within the mechanism of an entire government. Press relations people try to get

stories in the papers. Radio people try to maintain listener interest. Educational officers are concerned with the teachability of their materials. Spokesmen of the different agencies in related fields (such as shipping, air transport, currency control, social welfare) are apt to comment on a particular situation without reference to the needs of an inclusive national policy. How much advice was handed out on the occasion of the ultimatum to Tito? The Yugoslav authorities plainly risked politico-psychological pressure from us; they came prepared for the consequences; but both American official and private opinion expressed a wild medley of recommendations, suggestions, and analysis. Federal officials showed no better discipline than did the private citizens. Pre-belligerent planning may be forced on the United States by eventual international crises, but before that stage is reached, private and governmental persons working in the informational field might do well to consider how readily they could offer or enforce cooperation in the event of a real emergency.

Figure 51: Basic Types: Start of War. This leaflet embodies almost all possible mistakes in psychological warfare. It was prepared to explain why war came between America and Japan, but was not

even begun until many months after Pearl Harbor. The heading and style are official and formal. The message is no more than a footnote to history. Its last fault redeemed it; no arrangements were made for dropping it.

Psychological Warfare Plans.

A general plan for psychological warfare expresses the aims of the portion of the war (either in point of time, or with respect to a stated area) to which it refers. It states the maximum goals which psychological warfare can, with honest realism, be counted on to accomplish if all goes well. It indicates the minimum effect, which (unlike combat operations) can fall precisely at zero.

The general plan then goes on to state the conditions which will govern the operating agencies. The important part of this section lies in guessing where the operating agencies are likely to need coordination and where not. If the plan is to reveal highly important and therefore secret strategy, it should merely sketch the broad outlines of the processes intended, leaving to experts the responsibility of determining specific *do's* and *don'ts*. In such a case, however, the plan should not leave room for inter-agency or inter-personal doubt as to where the interpretive function lies. Too often, highly formal agreements are interpreted out of existence by propagandists who are interested in adding their own proposals to those set forth and agreed upon in the plan. When definition of the plan in operational terms⁴⁰ is needed, the location of the sub-definer should be made very plain unless the propaganda establishment itself happens to be remarkably well organized and in no further need of definite prescriptions of function.

The inclusion of actual political and military goals in a propaganda plan is an exceedingly ambitious undertaking. The goal, "To foster a spirit of nationalism and independence

among the Eastern Arachosian people to the end that they may revolt and set up their own pro-Allied government," is a commitment beyond the reach of normal propaganda. It comes closer to requiring all the facilities of the operating state, financial, diplomatic, covert, and paramilitary, to put it into effect. The goal, "To give sympathetic circulation to Eastern Arachosian autonomist sentiments so as to promote interference with the occupying power," is much more nearly attainable. Military goals are often described by propagandists as attainable by means of propaganda alone, but there is no known example of psychological warfare having attained a strictly military goal without assistance by other means of warfare. Goals such as "the defeat of —," "the surrender of —," or the "destruction of —," have no place in practical propaganda planning, since they are pretentious or deceptive. More legitimate are the goals actually obtained by propaganda, such as "encouragement of a spirit of factionalism which may assist defeat ...," "promotion of war-weariness that will make the process of surrender more easily accomplished ...," and "appeals for the destruction of —." Such points may appear minor, but it is the overstatement of the propaganda case that has many times goaded disinterested outsiders into becoming skeptics or opponents.

Political and military goals can be described only in terms of hopes; effective psychological goals—goals resting in the form of opinion which it is desired to create—are very concrete. If enemy surrender is desired, propaganda leaves to the operator no further scope for revenge themes which will frighten the enemy away from surrender. If the enemy leader is to be discredited on the basis of having poor military judgment, the contrasting good judgment of the enemy general is a necessary ingredient. The psychological goals have to be framed in terms of how much the enemy listener, the Propaganda Man, can stand and can believe.

(See page [153](#).) Since he listens irregularly, furtively, and half-antagonistically, propaganda will defeat itself if it shifts from goal to goal with logical but finespun dexterity. Psychological goals are attained only by sustained, consistent patterns of propaganda; they have to be plain, repetitive, and insistent. Political and military goals can be anything the planners feel like including as a pious wish. They might as well consist of a current re-statement of political and military aims for the subject or area at the time of planning. They are beyond the reach of practical psychological warfare.

National-level and general staff level plans have to be made up in much the same way. If the plan is good it will provide for its own circulation to all government instrumentalities which do in fact conduct propaganda in the particular field involved. It does no good to adopt a plan for the encouragement of the Filipinos and the inducement of cooperation among the Filipino officials of the Japanese-sponsored Republic (which means a tone of conciliation toward Filipino leaders or officials who hold puppet titles) if a cabinet member keeps calling publicly for the immediate execution of any Filipino who ever had dinner with a Japanese. It is useless to try to cooperate with Communist guerrillas in West K'tai on the argument, "We all oppose the Axis together! Ideologies don't matter when brave men fight side by side"—if at the same time the guerrillas know we have a strong domestic campaign on against Communism. Telling a Communist that ideologies don't matter is like saying to a Jesuit, "Let's skip the superstitions, Father, and leave religion out of it. Get down to business." To some kinds of people, ideology *is* business. The broad propaganda plan should make choices that reflect the judgment of the reviewing officers. If they are made in a vacuum, without taking into consideration the actual opinion of the audience group, they might as well not be made at all.

Propaganda plans must be circulated to non-propaganda agencies in order to make sure that routine public relations or announcements of current or contemplated action, and statements of basic policy do not contradict or neutralize the plan once it is put into effect. Frequently months of propaganda work can be undone by a tactless speech from somebody in the same government but in an unrelated agency. Authoritative circulation of the plan—which means that the plan must be neither long nor over-secret—can help forestall such mistakes. Speech clearance, requiring review of all official and policy-making speeches in advance of delivery, is the surest safeguard against overt collision between different spokesmen. In World War II it was applied with some success, but the exceptions were so conspicuous that the effective coordination passed almost unnoticed.

Strategic and Consolidation Plans.

Advance psychological warfare plans for concrete military operations not only require a statement of the propaganda operation to be performed with facilities and personnel who are expected to remain static, but demand that the psychological warfare personnel, together with the needful gear, be moved right along with the advancing forces. This makes planning more definite, and those parts of the plans that do not require psychological or political prescription of content can be written in standard military form.

Wise consolidation plans give urgent priority to the restoration of the home-grown informational media and recreational facilities of the occupied territory. Definite anticipation of shortages in radio facilities, newsprint, ink, paper, and other supplies can ensure prompt reopening of consolidated facilities under way. The propaganda operators may tell higher echelons that the local people are not competent, cannot be trusted, and so on, but General

MacArthur's experience in Japan would seem to indicate that no army can carry on consolidation propaganda as efficiently as the conquered civilians themselves can, provided the civilians have:

- (1) Reasonable though restricted freedom of utterance, so that they can know what they may or may not say;
- (2) Prompt liaison for security and policy clearance, so that they can get an authoritative yes-or-no answer on proposed projects, enabling them to maintain operation without intolerable delays;
- (3) Friendly professional assistance in meeting material and staff shortages;
- (4) A series of phases, marking off the forms and methods of control so that the controlling staff can plan for a first phase of doing its own publishing and broadcasting, a second phase of letting the local people work under license with close supervision and technical help, and a third phase of permitting them freedom within the normal censorship limits of military government. The American DISCC's (District Information Services Control Commands) in the American Zone of Germany did an excellent job in moving rapidly from phase one to phase two in 1945 and 1946.

Contingency Plans.

Frequently the chiefs of government and services know of an operation or danger that may arise, which will change the character of the war. Such were the North African landings, the Italian surrender, D-day itself, the joining of the American and Russian forces in Germany, Hitler's death. For such contingencies, it is desirable to have plans ready stating the reaction of the government to the event. Such

plans can be prepared and distributed to select personnel, and downgraded or released, together with any needed last-minute change, when the first word comes through that the event is officially to be recognized. Profoundly secret contingencies—such as Hiroshima day—do not lend themselves to such treatment.

It must be repeated that plans are effective only when transposed into plain, simple, usable guidances for the actual operatives. When a plan is so secret or so involved that the only people who could carry it out are not allowed to know anything about it, it becomes a sad self-defeating effort.

CHAPTER 12

Operations for Civilians

Plainly, psychological warfare operates against civilians with as much effect as it does against troops. Indeed, under the rather high standards set for modern warfare by The Hague and Geneva conventions, psychological warfare is left as one of the few completely legitimate weapons which can on occasion be directed against an exclusively civilian and noncombatant target. Even though World War II erased most of the distinctions between military and civilian, leaving civilians in the vertical front line of all air war, psychological warfare gained. It became a more useful instrument for bettering war. Civilian interest in propaganda became no mere matter of emotional loyalty or philosophical preference, but a life-and-death matter to its recipients. After fire raids it would be a madman who would disregard an enemy bomb-warning leaflet without trying to figure out its application to himself and his children.

Short-wave Radio.

Short-wave radio is the chief burden-bearer of long-distance psychological warfare. It is more useful as a means of connecting originating offices with standard-wave relay stations than as a direct means of communication. Even in free countries, short-wave sets are not often plentiful. The conditions of reception, from a purely technical point of view, are often undesirable; recreational material does not go through since a short-wave listener will put up with the static when he is receiving vital, vividly presented news, but often will not try to make out soap opera or music over the squawks of the ether, and the use of short-wave reception in wartime implies a deliberate willingness on the part of the listener to do something which he knows to be disloyal or dangerous.

Short-wave does make it possible for advanced standard-wave propaganda stations to pass along material which has been prepared in the homeland. Large staffs can do the work. The news can be put through a large, alert, well organized office. Features can be prepared by real professionals, acted out by a number of actors, put on records, reviewed, and then relayed to the standard-wave station whenever needed. The Americans at Radio Saipan thus broadcast right into Japan, and were able to transmit materials which could not possibly have been put on the air with the staff working on the island. The people at Saipan were mostly telecommunications technicians, engaged in picking up the short-wave from Hawaii or San Francisco and in passing it on into the enemy country on the standard wave length. Millions of Japanese heard our Saipan standard-wave broadcasts, in contrast to the dozens or hundreds who had heard our short-wave previously.

The use of homeland facilities makes possible the advance preparation of a large collection of material ready

for broadcast. In security-sensitive or otherwise dubious situations, four or five alternate programs can be worked out for the same amount of program time. On wire recorders or disc records, the proposed material can be passed around in finished form, reviewed, selected, censored, and approved. This would not be true of a hurried station working far forward in the zone of operations.

Short-wave has its own advantages, however, apart from its utility as a means of getting program material to the relay stations. Short-wave can and will be picked up by the enemy monitors and enemy intelligence systems. It will also be heard by persons of power, wealth, and influence, irrespective of the economic or political system of the enemy. The big shots of any system know how to transcend limitations that awe or defeat the ordinary man. The short-wave transmitter speaks therefore to the enemy government, to the groups which compose the enemy government, and to the individuals in or out of the enemy government who are leaders in their own country. We found that the *Joho Kyoku* and the *Gaimusho* (Foreign Office) in Tokyo were mimeographing a daily summary of our San Francisco broadcasts, and we thus knew that anything we said over San Francisco would be heard by the most influential men in Japan. Captain Ellis Zacharias, U.S.N., spoke Japanese and had known most of the Japanese leaders personally before the war; with government monitoring known to exist he felt free to address the Japanese leaders personally and directly with assurance his words would reach them, and his broadcasts are confessed by the Japanese themselves to have played a contributory part in bringing about the Japanese decision to surrender.

Standard-wave.

The most effective use of radio is that which falls within the receiving capacity of the ordinary receiving sets owned or used by the enemy population. This means the establishment of transmitting facilities close enough to the enemy territory for the programs to get through. As between the United States and Japan from 1941 through 1944, this was very difficult. No Americans ever dared join the Shantung guerrillas, whether Kuomintang or Communist, with transmitters; and as long as we broadcast from the safety of our side of the ocean, we could only hope that occasional freak conditions would echo programs into Japan two or three times a month. With the British and the Germans, it was altogether different; the two countries were virtually touching, and each could cover the entire enemy territory.

With short-distance standard-wave broadcasting to an enemy known to have millions of radio receivers, strategic radio becomes effective. The chance is provided for building up a consistent group of listeners, for influencing their morale and opinions, and for circulating rumors that will reach almost every single person in the enemy population. The temptation to perform tricks, to lapse back to peacetime standards of radio-as-entertainment or radio-as-advertising, is a constant one. The propagandist knows that he is being heard, and he fears that his audience will lose interest if he does not stimulate them with a brilliantly variegated series of programs.

Black radio comes into its own on standard wave. The British could put the mysterious anti-British, anti-Hitler broadcaster *Gustav Siegfried Eins* on the air, with his rousing obscenities, his coarse but believable gossip, his wild diatribes against the Allies and against the Nazi scum who got in the way of the glorious German army. He was so good that for a while even American propaganda thought he might be a spokesman for the saucier members of the

Wehrmacht general staff. The Germans could broadcast proletarian propaganda on the *Lenin Old Guard* station, foaming at the mouth whenever they mentioned the crazy vile Fascist swine Hitler, and then going into tantrums because the Communist party needed all the brave glorious leaders who had been murdered by the fat bureaucrat Stalin. Ed and Joe could talk out of Bremen and pretend to be scooting around the American mid-west, one jump ahead of the G-men with their trailer and concealed transmitter, telling the rest of the Americans the low-down about "that goof Roosevelt and his Jewish war," but Ed and Joe were not good enough to fool anybody. Black radio is great fun for the operators, but its use is often limited to a twisted kind of entertainment designed to affect the morale of dubious groups. It leaps to sudden importance only in times of critical panic when it can add the last catalyst to national confusion, precipitating chaos.

The beginning and end of standard-wave transmission is news. News (see page [135](#)) uses standard appeals. It should be factual but selectively factual. Repetition of basic themes is much more important than the constant invention of new ones. The propaganda chief has nothing to do, day in and day out, but to think of his own programs. He becomes familiar with them and bored by them. He visualizes his Propaganda Man as a person who hears all transmissions and is understandably bored by them, overlooking the interruptions that listeners face, the long gaps between the programs they hear, the weather interference, the static, the police measures.

Even with peacetime facilities tremendous simplicity and repetition are needed to convey advertising on the radio. In wartime repetition is even more necessary. It serves the double function of driving the theme home to listeners who have heard it before, while broadening the circle of listeners with each transmission. A point of diminishing returns is

soon reached but even diminished returns are often rewarding. The hardest-to-reach people are sometimes the ones it is most important to reach with a simple, basic, persuasive item. Repetition thus ensures depth of response in the core audience, while adding to the marginal audience with each additional application. What is deadly monotonous to the propagandist himself may, on the thousandth repetition, merely have become pleasantly familiar to the Propaganda Man on the other end. The author has talked to any number of clandestine listeners to our propaganda who have almost wept with rage as they told of listening to jokes, novelties, political speeches and other funny stuff when they hoped to get a clean-cut announcement of the latest military news.

Communication Through the Mails.

In World War II, propaganda was not able to make use of the mails the way that the propagandists of World War I succeeded in doing. The mails were much more intermittent. The channels into Germany through Scandinavia were not kept open except for Sweden, which was reachable, rather perilously, by air alone; Iberia was an inhospitable base. German counterintelligence was more than ruthless; it was effectively savage and made the Germany of Kaiser Wilhelm seem rustic by contrast. With Japan, anything would have had to go through Soviet censorship to get there in the first place, and then meet the traditional intricacies of Japanese red tape. Mail propaganda was therefore not heavily developed.

Something was accomplished, however, by use of the Portuguese, Spanish, Swiss and Chinese press. Enemy officials and private persons were known to read these, and it was possible to do a great deal toward influencing editorial content.

Major mail-propaganda operations were conducted against us, however. The Nazis, as part of their prebelligerent planning and operations, sent enormous quantities of propaganda through the United States mail—sometimes postage-free under the frank of Congressmen. The Japanese, down to the time of Pearl Harbor, kept large public-relations staffs running at full speed in New York, Washington, and other American cities. They helped their American friends with money and by heavy purchase of copyright material friendly to Japan—thus making it unnecessary for any author to report himself as a Japanese paid agent, and they offered Japanese "cultural and educational" information to interested persons. It really was cultural and well done. By talking about Japanese poetry, religion and cherry blossoms, and omitting all war propaganda, the handsome little booklets kept alive the memory of a hospitable, quaint, charming Japan. Some of this material was mailed directly from Japan to the United States.

Since mail propaganda depends on the freedom of the mails, it is much more apt to be used by a dictatorship against us than by us against a dictatorship.

Leaflets.

The types of leaflets are described in the next chapter (page [211](#)), in the course of discussing leaflets addressed to troops. Each leaflet designed for a military group has its civilian equivalents. In addition to the military types, overt propaganda leaflets for civilians should include:

- (1) Communications from the legitimate authorities (whether government-in-exile, underground, or friendly quisling) of the civilians addressed.

- (2) Newspapers in air format, reduced in scale, but with a heavy proportion of the normal peacetime features of the audience's own press.
- (3) Novelty materials appealing to children, who are apt to be among the most industrious collectors of leaflets, disseminating them far and wide with less danger of reprisal from the occupying power or the police than adults might face. (Good adult leaflets are as interesting to children as are leaflets especially designed for them. The use of color printing, vivid illustrations, pictures of air battles, how-it-works diagrams of weapons, and so forth, may reach the teen-age audience best if it gives no indication of being aimed at them.)
- (4) Gifts—soap, salt, needles, matches, chocolate and similar articles dropped to civilian populations. (This demonstrates the wealth and benevolence of the giver. Countermeasures to enemy use of this type of propaganda consist of dropping a few duplicates of his gifts, containing poison-ivy soap, nauseating salt, infected-looking needles, explosive chocolate, etc. The Germans are reported to have followed this procedure against the American air gifts dropped to Italy and France. With the avoidance or the spoilage of gifts, the propaganda effect becomes so confused that both sides find it worth desisting for a while.)
- (5) Appeals to women. (Women, statistically, are around 50% of the population of any country. With the diversion of men to fighting operations the percentage of women in the home population rises and in wartime it may become 60% or 70%. They face social and economic problems much more immediately than do men because the responsibility for maintaining homes and children normally falls on them. Evidence of humane intentions, of reluctance to wage the most cruel forms of war, of

attempts to help civilians escape unnecessary danger, can bring women into the participating enemy group for relaying propaganda.)

Pamphlets.

Where air-dropping facilities are plentiful, leaflets can be supplemented by pamphlets. Pamphlets have the advantage of giving the propagandist more space for texts or pictures, enabling him to tackle enemy arguments in detail or in depth. Pamphlets can present sustained arguments, and thus come closer to meeting the domestic propaganda facilities of the enemy on even ground. They are especially useful in countering or neutralizing those enemy arguments which depend either on formal argument or on misapplied statistics, and which therefore require point-by-point confutation.

The pamphlet shown in [figure 6](#) is an excellent example of the medium. Though it carries a complex message, it can be read by persons at the lowest educational level. It meets enemy propaganda over a whole range of themes. It is apt to be disseminated farther, whether initial distribution be by ground or by air.

Unlike the leaflet, the pamphlet is sometimes hard to conceal. For well policed areas, it must be supplied with a protective disguise if it is to be passed along. One ingenious pamphlet made up by Dennis McEvoy and Don Brown at OWI for dropping on the Japanese, started out with a warning: "*Enemy! Warning! This is an Enemy Publication, issued by the United States Government. Finder is Commanded to take this to the Nearest Police Station Immediately! Enemy!*" The pamphlet gave a general statement of Japan's bad war position, *and was addressed to Japanese policemen and police officials*. The cover urged

the policemen not to keep the pamphlet, nor to destroy it, but to pass it on up through channels to their superiors as an instance of enemy propaganda. (We never found out what the Japanese police actually did when they got these.)

One Japanese black leaflet assumed the proportions of a book, and was made up in the familiar format of the pocket-sized twenty-five-cent volumes. With a New York dateline, a copyright notice, and even a printers' union label all neatly falsified, the book expressed opposition to Roosevelt's war. It was circulated by the Japanese as a captured enemy book, presumably, in order to convince their own people and their Asiatic associates that opposition to World War II existed within the United States itself.

Almost all belligerents issued malingerer's handbooks during the war. These started out with statements that the medical control system was inadequate, that each man had to look out for himself, and that feigned sickness was often the only alternative to real sickness. Disguised as entertainment booklets, "instructions" accompanying medicine, or even as official handbooks (of the enemy government) for this and that purpose, the leaflets gave detailed instructions on how to fake tuberculosis, heart trouble, and other diseases.

Subversive Operations.

Propaganda to friendly civilians whose country has been overrun by the enemy can be effectively promoted by collaboration with local patriots—unless political considerations prevent such collaboration. This type of operation requires careful cooperation between propaganda (overt), subversive facilities, and intelligence personnel. World War II saw the type used on all fronts. The Japanese made especially bold use of it during the conquest of

Malaya, the occupation of Burma, and the Chinese Railway Campaigns of 1944. Natives on the enemy side were regarded by us as quislings; the Japanese honored them as patriots and duped them effectively.

Bold black propaganda operations can often embarrass the enemy. The dropping of a few hundred tons of well counterfeited currency would tend to foul up any fiscal system. Peacetime counterfeiters operate with poor materials, secretly, and in small shops. When instructed, a government agency can do an astoundingly good job of counterfeiting. The United States is on the vulnerable side of this operation, because our money happens to be the most trusted and most widely hoarded in the world. Various governments are believed to have run off substantial numbers of United States twenty and fifty dollar bills. A less offensive operation consists of giving the enemy populace sets of ration cards, along with simple suggestions on how to finish the forging job so as to make it convincing. The Nazis were especially subject to this kind of attack, since German methodical bookkeeping required a large number of documents to be in the possession of each citizen. Falsification of any of these made the German officials go mad with confusion.

To a country suffering from too much policing, the transmission by black propaganda of facsimile personal-identity cards in large numbers would be welcomed by many common citizens and would keep the enemy police procedure at a high pitch of futile haste. The essence of this, as of all good black propaganda, is to confuse the enemy authorities while winning the thankfulness of the enemy people—preferably while building up the myth within the enemy country that large, well-organized groups of revolutionists are ready to end the war when their time comes.

If white propaganda is to be compared to incendiary bombing, in that it ultimately affects the enemy armed services by disorganizing the homeland behind them, black propaganda may be compared to the tinfoil strips used in anti-radar. Black propaganda strikes directly at enemy security. It gives him too much to do, and thus increases the chances for agents down on the ground to succeed in their lonely, dangerous work.

Motion Pictures.

In consolidated areas, allied or neutral territory, and the home jurisdiction, motion pictures for civilians can be employed as a major propaganda instrument. The combination of visual and auditory appeal ensures a concentration of attention not commanded by other media. In both World Wars, the U.S. made extensive use of film.

Procurement can be either through direct governmental manufacture of the finished product, or by subcontracting to nongovernmental agencies. Propaganda films normally make a point of displaying the military prowess and civic virtue of the distributor.

Officially distributed films are, however, almost always overshadowed by pure entertainment films. The wartime official movie can penetrate no deeper than can the unofficial picture. Financial and commercial control, plus censorship, limits the periphery into which motion-picture showings can be extended. Often the private film will be shown when a public one would be suppressed. And in time of peace, the propaganda movie has ever sharper competition from its private competitors. Few propaganda movies have ever achieved the spectacular impact of some private films in portraying the American way of life. Tahitians, Kansu men, Hindus and Portuguese would

probably agree unanimously in preferring the USA of Laurel and Hardy to the USA of strong-faced men building dams and teaching better chicken-raising.

Only rarely does the cinema penetrate enemy territory or reach clandestine audiences. Its direct contribution to critical-zone psychological warfare is therefore slight. Perhaps television may in course of time combine attention-holding with transmissibility.

CHAPTER 13

Operations Against Troops

In every instance of systematic American use of psychological warfare against enemy troops during World War II, affirmative results were discerned after the operation had been in effect for a short while. Figure 46 shows the consummation of the troop propaganda program; these Germans are surrendering and they carry the Allied leaflets with them. By the latter phases of the liberation of France, 90 per cent of the enemy prisoners reported that they had seen or possessed Allied leaflets and the most famous leaflet of them all, the celebrated *Passierschein* (see figure 4) came to be as familiar to the Germans as their own paper money.⁴¹ Since every enemy who surrenders is one less man to root out or destroy at a cost of life to one's own side, the sharp upswing of enemy surrenders was a decided military gain.

Two separate types of psychological reaction are to be sought in the enemy soldier's mind. The first consists of a general lowering of his morale or efficiency even when he is not in a position to perform any overt act, such as surrendering, which would hurt his side and help ours. This may be called MO, or morale operations. The second type of

action is overt action (surrendering, deserting his post of duty, mutinying) which can be induced only if the appeal is expertly timed.

Operations against troops must be based on the objective military situation. Suffering and exertion increase realism; plain soldiers are not apt to be talked over by propaganda unless the propaganda is carefully cued to their actual situation. All propaganda should be based on fact; propaganda to troops must be based not merely on fact, but must show shrewd appreciative touches of understanding the troops' personal conditions. Propaganda is not much use to a nation undergoing abject defeat, for the troops on the victorious side will be buoyed up by the affirmation of victory from their own eyes.

Troop propaganda must therefore aim at eventual willing *capture* of the individual—not at surrender by his individual initiative. It must implant the notion that he may eventually be trapped, and that *if* that happens he should give up. The propaganda must not meet the soldier's loyalty in a head-on collision but must instead give the enemy soldier the opportunity of rationalizing himself out of the obligations of loyalty ("true loyalty requires survival and therefore surrender"). The steps, therefore, needed for good propaganda to actual combat troops include the following:

first, the notion that the enemy soldier may have to surrender as his side loses or retreats ("other [named] units have surrendered, with so-and-so many men; you will have to, too");

second, themes which make the enemy soldier believe that an all-out effort is wasted or misapplied;

third, the idea that he or his unit may find themselves in a hopeless situation soon;

fourth, identifying the next authentically bad situation with the "hopeless" situation;

fifth, concrete instructions for the actual surrender.⁴²

Figure 52: Basic Types: Troop Morale. Leaflets may be aimed at (1) morale, (2) news, (3) action. Morale leaflets neither communicate news nor call for specific action. Rather, they pave the way for action. Many of the previous illustrations have been of this type. This one is a troop morale leaflet used by the puppet Free India Army on their own men, who were discouraged by the self-evident lack of matériel and numbers. (Singapore, about 1944.)

Morale Operations.

Morale operations in the black field are, for the American record, still a closed book. German black operations against the French included such enterprises as sending French soldiers letters from their home towns telling them that their wives were committing adultery or were infected with venereal diseases, or calling out names and unit designations to French troops facing them in the Maginot Line, or giving away mourning dresses to women who would wear them on the streets of Paris, or intercepting telephone communications in the field and giving confusing or improper orders.

Figure 53: Paired Morale Leaflets. The Christmas card showing the Nativity was dropped by General MacArthur's psychological warfare people on the Filipinos. The Christmas cards with bells were prepared by the Japanese for the U.S. Army. The former were designed to cheer on the Filipinos; the latter, to depress the Americans with the defeatist messages inside the cards.

Morale operations on the white side included such items as the following:

- Sending mournful poetry leaflets to Japanese units which were known to be demoralized for lack of home furlough (China Theater);
- Dropping beautiful colored pictures of luscious Japanese victuals on starving troops (North Burma);
- Showing the Japanese Sad Sack in a cartoon, fighting everywhere while his officers get all the liquor, all the food, all the girls, and all the glory, while the common soldier ends up cremated (Southwest Pacific);
- Demonstrating that the Nazi pets on the German High Command have disrupted the splendid German military tradition and have thrown out the really competent professional generals (Soviet-German front);
- Pinning the nickname, *Der Sterber* (roughly, "Old Let's-go-get-killed!"), on a German general who had boasted of

his willingness to expend personnel (Anglo-American and Soviet radio);

Telling the German troops they were dying for a cause already lost (Italy);

Reporting back to the Germans the statements made by prisoners, to the effect they were damned glad that they were out of the fighting (France);

Telling the Japanese on Attu and Kiska that just as surely as the *kiri* leaf, symbol of death, would fall in the autumn, they too would fall (North Pacific);

Telling the Japanese homeland and troops that the Japanese Emperor had loved peace but that the militarists had dragged the Sacred Empire into war ("Peaceful is Morning in the Shrine Garden" leaflet; designed for Aleutians, used over Japan);

Telling the Chinese in China that the Americans would soon cut the Japanese conquered empire in two with Asiatic landings, and then dropping the leaflet, written in simple Chinese which could be figured out by Japanese, on the Japanese troops (China);

Congratulating imaginary agents in ostensible code over the voice radio for the excellent work they have allegedly done in the enemy home country (all theaters).

Figure 54: Troop Morale Leaflet, Grey. This German leaflet from the Italian front attempts to remind American troops of the bonus troubles of 1932—a year in which most of the American soldiers were still in school. Only to older men could the appeal carry much weight. The drawing and typography are distinctively German. In terms of source, this leaflet is grey.

Figure 55: Chinese Communist Civilian Morale Leaflet. This leaflet attempts to raise peasant morale while calling in general terms for economic action. It shows a peasant family welcoming home the father, who has been made a Hero of Labor. (Given the author by Political Department, Border Area Government, at Yen-an in September 1944.)

Figure 56: *General Morale: Matched Themes*. The American leaflet and Japanese one both show the same map with the same event—cutting of the enemy lifeline. In each case, the event is alleged to be news. However, the purpose of the leaflet is to depress the morale of all enemies who see it and to raise the morale of all friends.

Figure 57: *The Unlucky Japanese Sad Sack*. This morale pamphlet was used on the Japanese in South and Southwest Pacific. While it never produced any startling results on them, it did no harm. The pictures are done by a qualified Japanese artist. The pamphlet tells the story of the Japanese common soldier whose

officers get everything and give him nothing except a cremation box and memorial tablet.

The category "morale leaflets" covers all leaflets which neither call for immediate action, nor are designed primarily to convey news as such.

News Leaflets.

Figures 1, 7, 59, 60 and 65 are news leaflets. The propaganda purpose is evident, even to the enemy. But in the best of these leaflets there is a tendency to let the facts speak for themselves, and to show the enemy just what the actual situation is.

Tactical Defensive Psychological Warfare.

Morale operations are designed, therefore, to obtain responses other than immediate action. Several possible goals can be sought, singly or jointly. The commonest is preparation of the enemy soldier's mind for the actual physical act of surrender, the moral act of doing no more for his own side. Whenever surrender requires nothing more than passivity, morale leaflets are even more promising; in such cases all that is asked of the enemy is that he sit tight, fight inefficiently, and put up his hands when he is told to do so. Other purposes of morale operations include the irritation of enemy groups against each other, the general depression of enemy morale, the discouragement of enemy troops, officers or commanders.

Morale operations, to be effective, must be aimed at the actual, specific morale with which they are concerned. Well fed troops cannot be frightened by the remote prospect of starvation. Well officered troops cannot be induced to mutiny. Troops with good mail service cannot be made homesick. However, weak points in the enemy organization

can and do provide targets for morale operations. The defeat situation imposes tremendous strain on both the individual soldier and on officers in positions of responsibility. At such times, disunity rises to the surface, rumors spread more readily, and propaganda operations against morale can have devastating effect. (Allied psychological warfare against Germans in 1944-45 was aimed both at general officers and at the mass of the German troops—operations against the officers being founded on the common-sense premise that if large-scale German surrenders were sought, they could best be obtained by influencing those Germans who had the authority to surrender.)

Figure 58: Civilian Personal Mail. A common stunt in black or grey morale propaganda is the printing of facsimile personal letters. The letter shown at left is given in the original German form, along with its English twin which was—as usual—prepared for administrative clearance, records, and information. (Europe, Allied, 1944-45.)

Figure 59: Basic Types: Newspapers. Newspapers were prepared by almost every belligerent for almost every other. The examples shown above are Luftpost (SHAEF for Germans) and Rakkasan News (USAFPA for Japanese). Each newspaper copies the form of enemy civilian newspapers. The gross circulation of these airborne papers reached in some cases up into the millions.

A curious point developed. German morale in the higher grades was worse than in the lower. In the very last year of the war, despite the terrible air raids on their homeland behind them, the German troops on the Western front underwent only slight morale deterioration—in comparison with what they should have undergone had their morale borne a direct relationship to the strategic position of Germany as a whole. On the other hand, the morale among general officers and staff officers became wretched. The *putsch* of the generals the previous summer was merely a foretaste of the demoralization of the German higher command.

This unusual situation arose from the fact that the National Socialist propaganda machinery was still working on the masses of the troops. The political officers still made speeches. The troops were given pep talks, information about the war (hopelessly distorted information, but information none the less), and promises of privileges and comforts which—while they rarely materialized—were cheering. Simultaneously, German army discipline in the

Prussian tradition, never known to be wishy-washy or weak, was sharply stiffened. Furthermore, the plain soldiers carried over to the months of defeat those propaganda attitudes which they had been taught in the prewar and war years by Hitler's incessant domestic propaganda.

Figure 60: Basic Types: Spot News Leaflets. Spot news often makes better propaganda if handled while still fresh than if carried in newspapers or morale leaflets later on. The examples above were used against the Germans. News is given on one side of the leaflet, and is dropped while the news is still news; the other side has a propaganda appeal reading, in effect, "You must choose for yourself. Die for the Party or live for yourself!"

In contrast with common troops, the officers had the professional skill to understand the advantages possessed by the Allied armies. The officers knew enough about global and continental strategy, about the immediate strategy of the Western front, about economic factors and so on, to see that the situation was genuinely bad. Furthermore, the officer class had been less indoctrinated in the first place—many of them having personally despised the Nazis while welcoming Naziism as a means of getting the "cattle," the common people, into line behind the Wehrmacht—and those of them concerned with propaganda naturally became

critical of all propaganda, including their own government's, and communicated their criticisms to their brother officers.

Figure 61: Basic Types: Civilian Action. Desired civilian action can often be obtained by the use of clear instructions transmitted in leaflet form. This leaflet calls on the people of Alsace, Lorraine and Luxembourg to stay away from German communication lines, not to work for the Germans, and to make careful notes of atrocities which the Germans may commit.

German defenses against Allied psychological warfare worked. The German troops fought on when they had no business fighting, when their own generals thought it was time to quit and held out only because the S.S. and Gestapo promised ready death to any high officer who even whispered the word, "Defeat!"

This German defensive success was based on two factors:

- (1) The good condition of the German troops in terms of food, supply, communications, and weapons;
- (2) The coordination of all morale services for the purpose of defensive psychological warfare.

A common *Landser*, tough and ready in a whole division full of well fed, well armed men, could not be expected to undergo despair because freight-car loadings hundreds of miles away had dropped to zero. He might see that the Luftwaffe was less in evidence; he might grumble about

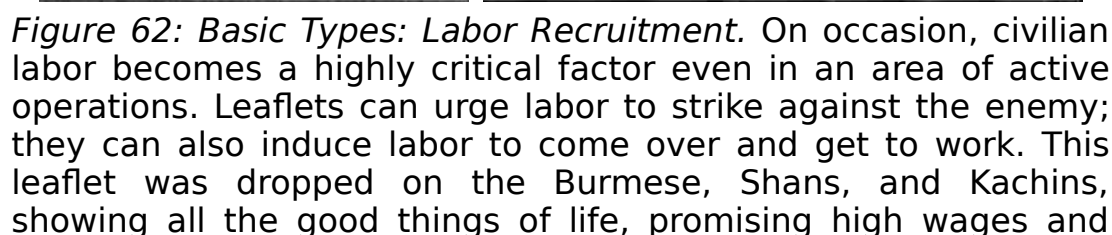

mail, or about having to use horse transport, but as long as he could see that his own unit was getting on all right, it was hard to persuade him that defeat was around the corner. In World War I, the German troops at the time of surrender *were* much better off than most of them thought they were; in World War II, they *thought* they were better off than they actually were. The Germans may not have been in perfect shape, but they were incomparably better off than the starving scarecrows with whom Generalissimo Chiang was trying to hold back the Japanese in West Hunan or the Americans who had fought despair, fever and Japanese—all three at once—on Bataan.

Along with their relatively good immediate condition, which masked and hid from them the strategic deterioration of the Reich to their rear, the German troops had the services of morale officers who were actually defensive psychological warfare operators.

In some units (more on the Eastern front than the Western) the Germans had *PK* units—*Propagandakompanie*, or propaganda companies. These were organizationally very interesting. They combined the functions of a combat propaganda company—printing, radio work, interrogation of prisoners, etc.—with the job of morale builders. Their services were available not only for use against the enemy, but for aid to the German troops themselves. Since they were currently informed of Allied propaganda lines, they were able to distribute counteracting propaganda at short notice and were even capable, on occasion, of forestalling Allied propaganda themes in advance.

Defensive psychological warfare in the Wehrmacht and, so far as it is known from Russian articles and fiction, in the Red Army as well, depended on unit-by-unit indoctrination with contempt of the enemy, mistrust of his news facilities, fear of his political aims, and hatred for the whole enemy

Most of this counteracting propaganda was not counterpropaganda, technically speaking. It was not designed against *Allied* propaganda, but for *German* morale. Morale-building was not left to occasional recreational facilities, newspapers for troops, USO entertainment and the like, but was compelled through the use of internal espionage, affirmative presentation of the German case, and unified informational operations. This German tactical defensive psychological warfare was neither a total success nor a total failure; insofar as it helped the Wehrmacht hold out, it aided the last-ditch Nazi war effort.

bonuses and adding that, anyhow, it was patriotic. Come work for the Allies!

The American army did not employ defensive psychological warfare in World War II. Troop indoctrination was extremely spotty. American morale remained good, not because it was *made* good by professionals who knew their job, but because Providence and the American people had brought up a generation of young men who started out well and—since the situation never approached hopelessness—kept on going with their spirits high.

For the future, the American and British armies face the problem of devising arrangements whereby within the limits of a free society soldiers can be affirmatively indoctrinated in the course of operations. USO, Red Cross, public relations, information and education at home, morale staffs in the theaters, Armed Forces Radio Service, OWI, the American press and the overseas military papers—these went their separate and uncorrelated ways without doing any harm, *last time*. If the next war starts, as it may, with an initial interchange of terrifying strategic bombardments, the morale situation may be inherently less healthy. Wise planning would provide, perhaps, a single chain of command for public relations, military propaganda and morale services—extending this all the way down to the platoon, if necessary—to make sure that the "national line" on any given topic is explained, presented, repeated, and (if necessary) enforced.

Such defensive psychological warfare might work against sensational enemy black operations, against attempted political division, and against fabrication of the news—provided it was carried out in an expert fashion. It could not change morale deterioration resulting from practical deterioration within the troop unit itself, except to decelerate the rate of decline. It would not make up for poor leadership. Nothing makes up for poor leadership.

Defensive psychological warfare at higher levels remains a self-contradiction. As pointed out above (page [159](#)), good psychological warfare is never directed merely against other psychological warfare. It is directed at the mind of the target audience, at *creating* attitudes of belief or doubt which lead to the desired action. Getting and keeping attention is one of its major missions, and psychological warfare which starts by fixing attention on the enemy presentation is doomed from the start. One of the most conspicuous examples of this was President Roosevelt's sensational message of 15 April 1939, addressed personally to the German Chancellor, Hitler, asking that Hitler promise not to invade 31 countries which Roosevelt listed by name. Defensive in tone, the message gave Hitler the chance to answer over the German world-wide radio while his Reichstag laughed its derision and applause. President Roosevelt's message was decent, sane, humane; it was inspiring to the people who already agreed with him; but it created no attitude in the Germans to whom it was addressed. A sharp, bullying, implicitly threatening speech from President Roosevelt might have penetrated the German mentality of the time, even Hitler's; reasonable reproach did not work. It was not aimed at creating any specific emotional reaction in the *German* mind.

Finally, it must be mentioned that defensive psychological warfare must include countersubversion and counterespionage. The Cheka—Soviet secret police in its first form—once boasted that "capitalist trouble-makers and saboteurs" could not long function in Russia because the countersubversive police were over a hundred million strong. What they meant was that they had trained and bullied the population into reporting anyone and everyone who seemed out of line. An attitude of popular cooperation with countersubversive agencies can be achieved only when those agencies are efficient, respected, and properly

presented to the public. Psychological warfare can defend its homeland against enemy operations in kind only if it creates an awareness of propaganda and makes the public critical of attitudes or opinions adverse to national policy. Inexpert official tactics, or the general denunciation of dissent, makes the citizen believe, with Mr. Bumble in *Oliver Twist*, that "... the law is a ass, a idiot."

Role of Small-Unit Commanders.

Unless a small-unit commander happens to command a unit which includes a Psychological Warfare team, he will have no active Psychological Warfare role. Psychological Warfare operations require the services of experts, and it would be easy for a small-unit commander to jeopardize the propaganda effort of an entire front by well meant but ill conceived interference in Psychological Warfare operations.

Where the unit does include a Psychological Warfare team, a duality of control arises. This requires good sense to keep in balance. The commander possesses absolute command and responsibility for the movement, protection, and operations timing of the team which happens to be attached to his unit. He should not presume to interfere in the special propaganda instructions flowing down to the team from superior Psychological Warfare echelons. Because of the pressing needs of propaganda operatives for news and for order-of-battle intelligence, it is normally desirable that they have their own signal facilities and that their routine operational communications short-circuit normal military channels. Otherwise, the unit's signal facilities will be overloaded with messages important to the Psychological Warfare team, but useless to the unit as a whole. Such absurdities as the encipherment and decipherment of routine enemy news digests should by all means be avoided. On the other hand, the command and

administrative messages should go through normal military channels. In the Galahad operation against the Japanese in North Burma, in which Merrill's Marauders participated, such a double set of communications channels took a long time to develop.

Where the small-unit commander does not possess professionally trained and equipped Psychological Warfare facilities, he should no more expect to engage in offensive Psychological Warfare than to undertake chemical warfare with improvised materials. It becomes his responsibility to turn to liaison.

Field Liaison.

One of the new roles developed within the Army during World War II was that of "Psychological Warfare Liaison Officer." Such men were either commissioned officers, usually of company grade, who had been given appropriate training, or were uniformed civilians detailed from OWI or OSS. It is the job of the liaison officer to become acquainted, as far down the echelon of command as may be necessary, with the commanders whom he is to service. He must at the same time retain an intimate knowledge of the personnel, procedures and facilities of the Psychological Warfare unit from which he is detached. His position must be compared to that of a salesman, who should know his product, his company, his sales manager, and his customers, all equally well. The liaison officer should be able to explain to small-unit commanders what Psychological Warfare can do for them, and he should learn to discriminate between high-priority and low-priority requests for PW materials.

For example, a well trained liaison officer might receive a call from a regimental or battalion commander. He would find that the commander desired leaflets to be used in a

particular tactical situation. He should be able to explain what standard ready-prepared leaflets were available, what delay would be involved in making up special leaflets, and what quantities of leaflets would be advisable. Turning back to his home headquarters, he should be able to present the commander's case to the leaflet printers or the public-address team, and should help the propaganda people in understanding the commander's problems.

Mechanics of Liaison.

The mechanics of liaison depend in each case on the Psychological Warfare unit. Some had extensive networks of liaison officers; others had virtually none. In China during 1943-44, the most minor tactical request for a leaflet had to be channeled all the way back to Theater Forward Echelon Headquarters, because the political situation was so touchy, the Chinese language so difficult, printing facilities so scarce, and qualified personnel so rare that there was no point in having channels cut across lower down. In France and Belgium, during 1944-45, Psychological Warfare units were established on a considerable scale at the army level, and liaison officers were widely scattered; it was possible for regimental or battalion commanders to make direct requests of liaison officers.

Radio Support.

On rare occasions, it becomes possible for radio support to be given a specific unit. The American standard-wave broadcasting station was set up in the vicinity of Lorient while that French port, still held by the Nazis, was under American siege. The *History of the 2d Mobile Broadcasting Company*⁴³ describes the operation as being

... the first attempt to coordinate artillery, leaflet and radio propaganda. The station had learned the location of the billets of various [Nazi] units in the town, together with the names of their key personnel. With this information, a "game" was arranged with the artillery. One day, at a certain time, these units were addressed by name and their members were told to go outside their buildings and five minutes later they would receive a message. Precisely, five minutes later, leaflet shells released the messages advising surrender. The ability of the Americans to do things like that impressed the German soldiers with their hopeless position more than words.

Obviously, such an operation required close contact with the enemy, plus known possession of standard-wave radio receivers by enemy personnel.

Air Support.

Normal communications channels, such as might be used for air-ground combat liaison, form one of the most valuable aids to the small unit. From time to time it is possible either for the unit to make up the leaflets (if it has a PW team) and to request their dropping by the associated air unit, or else to make a direct request to the appropriate higher Psychological Warfare headquarters, asking that the headquarters not only make up the leaflet but arrange for its dropping at a stated time.

Leaflet-Discharging Weapons.

The airplane was far and away the most important leaflet-distributing device. In the CBI Theater, there was developed a leaflet belly-tank of local design for use on pursuit planes. The belly-tank was converted to a leaflet-throwing machine. Adjustment of the controls could regulate the speed at which leaflets were discharged, so that the pilot could give enemy units or installations bursts of leaflets in precisely the same way that he would strafe them with machine guns. This, however, was exceptional, owing to the tremendous

dispersion of the Japanese in the jungle and the need to conserve leaflets. In most instances, the leaflet bomb or leaflet box was the standard Air Force method of distributing leaflets.

Among the ground weapons used for discharge of leaflets, there are the following:

- chemical warfare shells converted to leaflet use, especially smokesHELLS;

- almost every variety of available artillery shell (howitzers having proved especially useful);

- rifle grenades converted for leaflets;

- leaflet bundles with a small quantity of explosive, attached to a quick fuze, packed so as to be thrown in a manner similar to the manual throwing of a grenade.

Mortars were probably the chief leaflet-throwing device on both the European and Asiatic fronts; the Germans went so far as to develop a special propaganda mortar. Smoke shells proved particularly easy to adapt.

The firing of leaflet shells is a responsibility of the unit possessing the guns. Psychological Warfare teams were not issued their own guns, save for unit protection. The actual distribution of leaflet shells was effected, taking the Fifth Army as an example, in the following manner:

- The Army Combat Propaganda Team planned, cleared, printed and packed leaflets suitable for the occasion.

- The Team cleared with the Artillery Officer, Fifth Army, an agreement for an order to use the leaflets.

- The Team's own liaison officers transmit the order to the appropriate divisions and lower echelons. The order

itself prescribed the times for picking up the leaflets from the ammunition dumps.

The Team procures the empty shells and packs them with leaflets.

The Army order allots 150 leaflet shells per division.

The Team specifies, in the order, the time-limit within which the shells are to be used.

Corps and/or division selects the specific targets, the general target being all enemy concentrations within range.

In smaller units, the propaganda unit would often be placed in direct communication with a specific artillery unit, which would be charged with the responsibility for discharging the leaflet shells at opportune times. When a requesting unit asks for leaflets, and itself possesses the guns which could fire leaflet shells, it is entirely possible for the supplier to send leaflets ready-packed in the shells. However, even the most rapid shell-packing job takes considerably more time than the readying of aircraft for leaflet distribution. When it is considered that the plane not only discharges the leaflets, but delivers them from the supply point, all in one operation, it will be seen that close air-ground coordination will often do a quicker, bigger job of leaflet saturation than could be achieved by the requesting, preparing, transporting and firing of leaflet shells.

Contingencies of the Future.

This text refers to known experience. Short of turning to the field of futuristic fiction, it is impossible to provide discussion of situations which have not been known in the American Army. The experiences of the Nazis and the Japanese cannot be taken by ourselves as wholly parallel,

since those peoples, under dictatorship and rabid indoctrination, produced a different kind of army from the American. What should a small-unit commander do if his men thought they had been contaminated by airborne disease germs distributed by enemy bacteriological warfare planes? How should he act if his men were told by an enemy broadcast that they would be exposed to radiation which would cause anemia, cancer, or death—if they did not surrender immediately? What should he do if he finds himself cut off from all American supplies, operating a lonely unit in contaminated or dangerous areas, and then discovers that his own men are the victims of enemy black propaganda? How should he behave if his men get the idea that they are never going to be replaced, and if they suspect (either spontaneously or because of enemy action) that the unit has been abandoned by the American government and people?

What could a commander do if a delegation called on him, right out in a zone of operations, and demanded a right to be heard? Suppose that he knew their complaints about food, rotation, danger, etc., to be justified, and knew at the same time that the enemy had subverted some of his men into being either dupes or traitors. Suppose his men protested a lack of deep lead-lined shelters the day after enemy leaflets instructed the American soldiers to ask for such shelters. Should he treat all such enlisted men as traitors? Suppose he is faced with the specter of political treason, subversion, and revolution? American officers have not faced such problems since the days in which George Washington was Commander in Chief. War after war, we have gone into the fight with a profound confidence in our ability to win. Future war may hold forth no such assurance. If America is injured, her troops decimated, their homes exploded or poisoned by foreign atomic attack, brand-new questions of psychological warfare will be posed. No living

American has ever had to face such problems. This is no assurance that they will never occur. Upon the manhood, the fairness, the sheer intelligence of small-unit commanders there may fall the unexpected task of holding their units together in the face of disastrous psychological attack.

Surrender Leaflets.

Surrender leaflets are the infantry of the propaganda war. They go in and finish the job to which the preceding years of radio broadcasts, the demoralization of the home front, the campaigns of news and morale materials to troops, and the actual air, ground, and sea attacks have led up.

Sudden use of surrender leaflets on a victorious or unprepared enemy is not likely to take effect. The Japanese surrender leaflets dropped on the Americans in Southwest Pacific were issued without previous materials readying the Americans. Furthermore, they were dropped when the American situation was plainly improving, and when American soldiers were not likely to be thinking about surrender in order to get individual escape from the war.

The preparation of surrender leaflets calls for the tactical use of printing facilities. This is the job of the combat propaganda unit, with its high-speed press, its liaison with both ground and air forces, its up-to-the-minute intelligence on enemy movements, situation, and order of battle. The enemy should be given leaflets showing him how clearly he is pinned down, identifying him, generally stripping him of the sense of secrecy and the trust in his commanders that make it possible for him to go on fighting. When surrender can be effected, he should be given the simplest, plainest command the circumstances allow. In the case of the Japanese, there were difficulties on the American side about

letting the Japanese come over to surrender; too many of them were suspected of having tucked hand grenades into their *fundoshi*. Many a Japanese started out for the Allied lines and failed to make his peaceful intentions plain enough. The result was a strong deterrent to other Japanese who may have been trying to decide whether they wanted to surrender or not.

Figure 63: Action Type: Air-Rescue Facilities. These leaflets from China Theater were designed to help the work of the Fourteenth Air Force. Action called for from the civilians included the assistance of hurt flyers, the identification of Americans as allies and not as Japanese when they parachuted to the ground, the avoidance of bridges and other bomb targets.

It was found that the bright white leaflet with the identifying stripes on it ([figure 69](#)) would be shown to our troops, who could be taught to hold their fire when they saw Japanese carrying that type of leaflet. To the Japanese, the plainness of the surrender formula was a considerable help in coming over.

Figure 64: Pre-Action News. Psychological warfare facilities can be extremely helpful in favorable situations. One of the most important ways of developing a favorable situation is to predispose enemy soldiers toward the idea of surrendering. News of surrender, emphasis on the comforts and relief of prisoners of war, and above all, emphasis on their numerousness can contribute to the actual act of surrender. This newspaper looks like a newspaper, but its chief emphasis is on the extent of surrenders.

Variations on the surrender leaflet include the following devices:

Letters, with signatures blacked out, of prisoners of war who have found conditions decent and who are enjoying rest, good care, and good food;

Photographs, with the faces blocked out when security procedures or the rules of war so require, showing enemy prisoners actually enjoying the benefits of being out of the war;

Political arguments to the effect that the highest duty of the soldier is to his country (or Emperor) and that if he dies for the sake of some general in a foolish war, he will be denying his country a fine postwar citizen like himself, needed for reconstruction and progress;

A list of the foods available to surrenderees (see [figure 13](#), from World War I);

A statement of the conditions of military imprisonment, reaffirming the rules of the Geneva convention;

The promise that the potential prisoner will be allowed mail communication with home;

Anger-motif, showing scum and profiteers at home, and attempting to induce surrender by telling the soldier that he is being made a sucker;

Obscene pictures, showing naked women, designed to make the involuntary celibate so desirous of women that he surrenders out of bad nerves. (Japanese idea, and did not work; the troops naturally kept the pornography but merely despised the Japanese as queer little people for having sent it. This type cannot be illustrated; the Library of Congress has copies in a locked file.)

Figure 65: Direct Commands to Enemy Forces. As the situation develops against the enemy, it becomes possible to use leaflets to force the surrender of enemy troops by direct command. This kind of appeal is lost when enemy morale remains irrationally high because of a beloved commander or some other unpredictable factor, but in normal situations it either forces the

enemy commander's hand or leaves him with a deteriorating force.

Figure 66: Basic Types: Contingency Commands. Leaflets can be made up in advance to govern typical situations which may arise. This "Command to the Scattered German Troop Units" orders all isolated German remnants to surrender to the nearest Allied force.

Figure 67: Tactical Surrender Leaflets. Enemy troops often fail to understand why they should surrender. Under such circumstances, it is useful to send them a map, showing them

plainly what their situation is. If misrepresentation is done at this point, it will be at the cost of loss of credence later on. These leaflets were prepared to prevent Japanese units in the Philippines from staging last-ditch fights after surrender of Japan. Similar maps had been used for tactical purposes earlier.

The effective surrender leaflet frequently turns language difficulties into an asset. Whole series of leaflets will teach the enemy soldier how to say, "I surrender," in the language of the propagandist. The words, "Ei sörrender," were made familiar to every German soldier; it is simply the phonetic spelling of English for Germans to pronounce. Surrender is not merely a case of transferring loyalties; it is a highly dangerous operation for most infantrymen. It takes nerve if done deliberately. The voluntary surrenderee risks being shot by some exasperated officer or comrade on his own side; he risks court-martial for treason if his surrender is wilful and his side wins the war; he may run into a trigger-happy enemy who will shoot him; he may fail to make himself understood to the enemy. Therefore surrender leaflets try to catch some simple procedure, to indoctrinate the enemy soldier with routine things which he can do when the opportunity arises. Of all leaflets, those most effective (most closely tied in with unconscious preparation for eventual conscious choice) are the ones dealing specifically with concrete treatment of prisoners of war. The surrender leaflet itself can be used as an authorization to surrender. The enemy soldier who carries a leaflet around with him, just in case he may need it, is already partially subverted from enemy service.

Figure 68: Basic Types: Surrender Leaflet. The surrender leaflet shown was not welcomed by the Japanese because it indicated that the Japanese soldier using it wished to surrender. This was very vulgar and depressing indeed, and few Japanese soldiers would accept such a humiliation. Except for its wording, the leaflet is good. As large as a big magazine cover, it is white with red and blue trim and can be identified readily.

Other Action Leaflets.

In World War II there were ample opportunities to surrender on most fronts. In subsequent conflicts, however, it is quite possible that surrendering will be physically unfeasible, because the surrenderee will have no one at hand to whom to surrender (see below, pages [248-250](#)). Recourse may then be had to a type of leaflet only occasionally used in World War II—the leaflet which calls on enemy troops to perform some action other than surrender. The commonest of these is desertion—when it is known that enemy forces are being held in a dangerous spot by their own command, and when there is a fair probability that heavy artillery or air attack can be concentrated on the area which has been strewn with leaflets. (A bluff normally fails, and moreover discredits later operations of the same kind, whereas a

successful and fulfilled threat builds up cumulative credibility among the enemy audience.) When long range weapons are used, it may be possible to address troops by leaflet before the attack, suggesting that they remove themselves, as individuals, to places of safety; such an operation would assist enemy disorganization. The author knows of no case where the Germans did this with their V-1 or V-2 bombs, but [figure 3](#) applied to both civilians and troops in the cities marked for destruction by incendiary B-29 raids.

Black action appeals may teach the enemy troops how to mangle, may present political or ethnic arguments to troops known to be members of minorities or satellite nationalities (for example, Poles in Nazi service), with the intent that these mutiny, or may—at the very end of a war—call upon enemy troops as units to cease resistance and to await a later opportunity for organized surrender.

Loudspeaker Units.

The use of the amplified human voice developed slowly in World War II. Improvised units were set up in North Africa, in the Italian landings, at Anzio, and in the Normandy operations. At times these talked over valuable groups of enemy prisoners, but their range did not go beyond two hundred yards, which sharply limited their utility. The Navy was simultaneously experimenting with Polly Planes in the Pacific, which flew at considerable altitudes over islands and talked to the Japanese troops on the ground.

Figure 69: Improved Surrender Leaflet. The new leaflet which did bring the Japanese in was better phrased. It did not mention the nasty word, *surrender*, but said, "I Cease Resistance." It also showed the Japanese how to carry the leaflet so as to persuade the trigger-happy Americans that he was not holding a hand grenade behind it. The back of the leaflet, instead of being left blank, showed happy Japanese prisoners enjoying American captivity, their faces left identifiable as Japanese but blanked out enough to head off individual identification. Compare this with [figure 4](#), the Passierschein we used on the Germans.

Ultimate success came with the development of loudspeakers on tank mounts. These developed a range of two miles with the result that they had real value in combat operations. In April, 1945, a loudspeaker tank with the XIX Corps made an average of twenty broadcasts a day during action. Short talks were given to the enemy troops just before attack. Attacks were then withheld long enough to permit prisoners to come in. The attacks were then launched, lifted after a pause to permit more prisoners to come in, and finally pushed through. This tactic worked particularly well at road blocks where enemy troops were flanked. In the Teutoburger Wald a whole platoon was persuaded to surrender. At Hildesheim two hundred and fifty

prisoners came over together. Elsewhere in the drive into Germany, the Germans came over in even greater numbers, but the situation was then so obviously at its best for us that they probably would have responded similarly to command banners, black words on white background, such as the ancient Chinese imperial forces used to carry around for tactical communication with bandits and rebels.

On Okinawa tank-mounted loudspeakers were ingeniously hooked up. The American tank officers and crews obviously could not speak good colloquial Japanese. The Japanese troops were dug in like rodents, and in a condition of desperation that made them fight cruelly and suicidally. Even if the Americans shelled the openings of their cave mouths or ran armored bulldozers over the holes, burying Japanese alive, there was the chance that the Japanese would run through long underground passages and pop up later, possibly at night, to cause more damage before they were killed. With Americans and Japanese unable to talk to one another, this condition might have led to a severe loss of American life in mopping up hundreds upon hundreds of such minute Japanese strongholds. The American tanks had loudspeakers mounted on many of them; they had radio telephone communication, that could be used between the different tanks on a tank team, or—it was an alternative, and could not be used simultaneously—could be employed for the commanding tank to communicate back to headquarters.

At headquarters, American Japanese, whose American accents had been trained out of their voices in special public-speaking classes, sat ready and waiting.

The tank team would come into the valley, and the American commander would look the situation over. He would cut his radio telephone into communication with headquarters, and would then say:

"Hillside ahead of me. No characterizing features. Five or six holes, but I can't tell which ones have Japanese in them. I can get up the hill. There are two trees at the crest of the hill, and a bunch of these native graves over on the left."

The American-Japanese at headquarters would say: "Regular announcement, sir? Do you want them to assemble by the graves or at the trees?"

"Tell them to stand in front of the graves. That way they'll be coming down hill. Want to be cut in?"

"Yes, sir," says the headquarters man.

The tank commander would then cut his radiophone into a relay, and the tanks which had loudspeakers would automatically connect the loudspeaker units direct with the radio telephone. A voice, loud as the voice of a god, would fill the entire valley, coming from everywhere at once and speaking good clear Japanese:

"Attention, Japanese troops, attention! This is the American tank commander calling. I am going to destroy all resistance in this valley. Attention! I have flame-throwers. These will be used on all dugouts and caves. Attention! Flame-throwers will be employed. Gunfire will close the cave mouths. No Japanese personnel can expect to escape. Japanese personnel commanded to cease resistance. Japanese personnel commanded to cease resistance. Japanese personnel must assemble in front of native burial place, to American left flank, Japanese right flank."

The tank commander would watch, while the loudspeakers blared. First one Japanese, then more would come in small knots to the assembly place as directed. The commander would then cut the American-Japanese back in and say,

"I think they're holding out on the hill crest. Try that. Just a minute or two. If they don't start coming, I'll go after them and cut you in just when I reach the top...."

"Yes, sir. Which part of the hill crest, sir?"

"I can't tell. Anywhere."

Figure 70: End of War. This leaflet helped the war to end, just as did the great leaflet which submitted the Japanese surrender terms back to the Japanese people. On one side the leaflet carries news from the Wehrmacht's last defeats; on the other it takes up the future of Germany as determined by the Crimea Conference.

The speakers would be cut back in: "Attention, Japanese forces remaining on hill crest. Japanese forces just behind us under command of Colonel Musashi surrendered last night and are now well taken care of. You are being given the same chance. Attention, I will soon come up the hill...."

A few more Japanese figures, small as ants on a sand dune, would come into sight on the hill and begin clambering down to the point of surrender.⁴⁴

PART FOUR

PSYCHOLOGICAL WARFARE AFTER WORLD WAR II

CHAPTER 14

The "Cold War" and Seven Small Wars

The period after 1945 has turned out to be considerably more turbulent than most Americans expected. Though the victory over Fascism and Japanese militarism has proved to be psychologically and historically complete, the struggles between the victors have developed such mistrust and bitterness as to create a present-day equivalent of the Thirty Years' War, rather than a period of peace as it was understood by educated men of the nineteenth century.

Along with many other military and political phenomena, psychological warfare has been thrust into a period of "no war and no peace" which has proved to be extraordinarily difficult for Western men to deal with either emotionally or intellectually.⁴⁵ Such phrases as Churchill's term, "the Iron Curtain," and Walter Lippmann's coinage, "the Cold War," have become a part of civilized speech throughout the world. They have obscured almost as much as they have explained. It is entirely conceivable that an adequate description of the present historical period will only be written after the forces now operating have ceased to be significant; at that future time it may be possible for serious and reflective men to determine what happened in the middle of the twentieth century.

Recognition and Delay.

One of the preeminent factors in the psychological and opinion aspect of the turmoil in the mid-twentieth century has been the very sharp contrast between the *time* on which a given event occurred, the *delay* between the occurrence of the event and the final understanding of that event in their own terms by the strategic policy-makers affected, and the successful *recognition* of the event in policy papers looking toward a further future. The political and strategic character of much recent military history has therefore been a grotesque comedy of errors—ridiculous if it were not so deadly serious—involving the lives of the major urban populations of the world.

An event such as the liberation of Indochina from Japanese military occupation in 1945, met competently and reasonably by the standards of an anticipated "world of 1946," which unfortunately never materialized, led to the frustrations, bloodshed, deceit, and warfare of the late 1940s, and by 1954 became partially intelligible as a facet of the free world's struggle against Communism.

New Interpretations of Policy and Propaganda.

Polemic writing has been done concerning the role of propaganda, psychological warfare, psychological strategy, and comparable operations. In many instances the polemics have involved the presentation of two sides, each of which was right—one side maintaining that the old-fashioned world of free, sovereign nations, meeting in a parliament of man as constituted in the United Nations, could and should use the "realities" of traditional power politics as a guide to the present and the future, and should avoid the hopelessness, terrorism, and fanaticism of chronic ideological war; the other side with equal merits has often

argued that the ideological war is here, that its deniers are the witting or unwitting sympathizers or appeasers of Communism, that their "realities" are outmoded, and that the United States must face up to a crusade which will end in annihilation or death for either the Communist system or the constitutional democratic group of states.

What such polemics overlook is the terrifying probability that events may happen so rapidly that no one on either the Communist or anti-Communist side is capable of assimilating a new datum, such as the development of the hydrogen bomb, the death of Stalin, or the appearance of Israel among the nations, *until well after the event has occurred*. The occurrence of public events in all past civilizations has involved a considerable number of public agreements on the major hypotheses concerned; as pointed out earlier in this book, the antagonists in older wars usually, though not always, knew what the war was about. Today the spiritual, psychological, logical, and scientific inconsistencies and paradoxes within each system are so deep as to make the definition of long-range goals almost impossible. Any one goal, such as the establishment of peace, the appreciation of an international system of alliances against aggression, the maintenance of national sovereignty, the protection of a free-enterprise economy, the assurance of self-determination to non-self-governing peoples, or the like, may, *if emphasized*, contradict the concomitant goals which support it.

Communist and Anti-Communist Psychological Events.

Each of the two major systems has strengths of its own. The Communist strengths are sometimes too apparent to Americans, so much so that Americans exaggerate Communist power and overlook serious deficiencies in the

economies and the political character of the Communist group of nations. The Communists can suppress dissidence with a fanatical party line: the price they pay is the abrupt shifting of that line as international situations change. The Communists can appeal to youth by their dogmatic faith that they are the masters of the probable future of the world: they risk much if this faith does not pay off and if the world's youth sometimes turns against them because they promise too much and deliver too little. The Communists operating from an allegedly material basis offer psychological and spiritual values of a perverted kind, but have very considerable propaganda value; they give people a chance to sacrifice themselves, to work for causes greater than their individual personalities, "something to die for," and an apparent understanding of history: yet the Communists also risk psychological exhaustion and cynicism among their élite cadres as well as among their mass followings.

In the next chapter, concerning strategic information operations of the United States Government in the foreign field, there will be further discussion of the psychological strengths of the free world; we will say at this point that in the light of the strategic and military contexts of the postwar period the free world has had the advantages of modesty, relaxation, and elasticity. Among Americans, even among intelligent Americans, it is frequent to find the assumption being made that the chief strength of the free world consists of its legal rights and its democratic political processes, rather than in its actual (not merely formal) toleration of many points of view and its actual relaxation of the populations under its control.

Since the free world is not committed to victory as much as is the Communist world, it can afford more defeats without a corresponding loss of morale. Since the free world has not promised a Utopian future, it can go from the reality

of the 1950s to whatever realities the 1960s or the 1970s may bring without a sharp letdown in morale or widespread heartbreak among its most gifted advocates. In Cold War terms the free world is committed to fighting, but not to victory, while the Communists are committed to the actual though remote promise of triumph for their system throughout the world. The citizens of the United States can therefore contemplate the survival of the USSR or its annihilation and replacement by a democratic Russia with equanimity; their Soviet opposite numbers, group for group and class for class, cannot be as detached from the struggle.

Over all of us there hangs the entirely uncertain future raised by possible use of atomic bombs, hydrogen bombs, and other novel weapons—a future about which former Governor Adlai Stevenson felt so gloomy that he said another war would end civilization. (The rejoinder can, of course, be made that if another war would end civilization anyhow, win, lose, or draw, the United States might as well disband its defense forces now and enjoy life for the few short years that remain.)

The Cold War.

In some respects the Cold War is not novel. It resembles the intercivilizational wars of the past in which competing civilizations with definite moral and political foundations fought one another for final survival. This kind of warfare is very different indeed from struggles waged between nations which have a common civilization and which have a common interest in the preservation of that civilization. The Americans of the 1950s are waging a struggle much more like that between the Protestants and Catholics in the years 1618-48 than they are to the Civil War of 1861-65 or the Revolutionary War of 1775-81. In some respects we

Americans are back all the way to the fight between the Aztecs and Cortez or the struggle between Chinese and Chams in ancient Annam. What Mr. Lippmann calls merely a Cold War is something deeper, bigger, and worse than any war Americans have ever known before. The only parallel to it was the struggle between settlers and Indians on our own frontier: our battles with the Indians at least had the advantage of never leaving us with the hideous dread that the American Indians might sweep a White and Christian civilization from this continent.

Nature of the Cold War.

The Cold War is therefore a struggle, the beginnings of which can be found at any one of several dates (1848, 1917 and 1943 are some of those given) which is now being waged between non-Communist states and a Communist group of nations. No one now living can speak with assurance of the outcome. Only the most foolhardy of optimists could visualize a world in which the better aspects of each system would be developed and the factors common to each would be underscored and strengthened as supports for a peace-seeking international system under the UN. The struggle is larger than a war because it comprises pre-belligerent, belligerent, and post-belligerent activities both in global wars and in a possible general war. On the Communist side the techniques include sabotage, revolution, conspiracy, and fanatical organization. On the anti-Communist side a family of para-military weapons is gradually being developed and may or may not be thrown into the struggle. No war was ever as bitter or uncertain as this one because war, whatever its demerits, at least commits the nations to combat and to victory. War has the supreme merit of *decision*. The Cold War does not: people

have to fight it without knowing what it is or what they would get out of it if they could obtain the advantage.⁴⁶

Origins of the Cold War.

In retrospect it is easy to argue that the Communist system has been fighting all non-Communist systems ever since 1848; that the Soviet system has been in a moral condition of war with all other governments since 1917; that the democratic-Soviet alliance against the Fascist powers during 1941-45 was a sham and a fraud covering a three-cornered war; and that therefore attempts at a good alliance between non-Communists and Communists were shams, mistakes, or frauds. This is easy to say in the 1950s; it was not so apparent in the 1940s.

It can even be argued that Yalta, and everything for which Yalta stands, was a tragic mistake and yet a blessed one. If the Western powers had not attempted to deal amicably with the Soviet Union at Yalta the Western peoples, already hypersensitized in matters of conscience, might have attributed to themselves and to their posterity an unbearable burden of guilt. We and our children might have gone down fighting while wondering in our innermost hearts, "Why didn't we make a *real* try to avoid war with Soviet Russia?"

Though the Teheran and Yalta agreements have been violated by the USSR almost from the moment they were concluded, it can be argued that the Western world was wise in experimenting with appeasement because it liberated our consciences for future struggle. No one can possibly argue that we did not try to get along with the Communist system, that we failed to offer the Communists a reasonable share in the world of power politics, or that we threatened the Communists with aggression during the

course of our anti-fascist struggle. For better or for worse, we *did* try to get along with them. We have failed.

Why have we failed?

The failure seems to be much more on the side of the Communists than on the side of the free nations. Though it is possible for Left-liberals or hypercritical intellectuals to find fault with the U.S. and British position in this respect or that, short of extreme nit-picking it must be argued that the Communists jumped the gun on the Western powers in almost every case. Tito, while still in agreement with Moscow, proved implacable toward the constitutional Yugoslav government and the Church as they had existed before 1941. While Roosevelt was still living the Lublin Poles prepared a savage double-cross of the London Poles. Whether Communist action arose from a lamentable fear of our own aggressiveness, or a Machiavellian plan to conquer the world does not, at any time, matter very much; what matters is the almost indisputable fact that in many parts of the world the Communists undertook the initiative against the anti-Communists.

(The first edition of this book, *PSYCHOLOGICAL WARFARE*, was written in 1946 and published in 1948; the second edition is being completed eight years later, in 1954. Any reader who contrasts the two editions will see at a glance that the author, although suspicious of Communism, had no real anticipation of the fury or seriousness of the Communist attack upon the non-Communist world, nor of the strategic arguments and responsibilities which the free world would therewith be forced to accept.)

The Cold War and the Actual Fighting.

As late as 1948, when the talented and bold-minded Lt. Gen. Albert C. Wedemeyer was Deputy Chief of Staff, the

U.S. Army's psychological warfare facilities at the General Staff level consisted of a few paper assignments to colonels in operations and in training together with your author as a part-time consultant and one girl stenographer to keep the files. By 1953 these numbers were multiplied by the hundreds. Each of the military services has accepted its responsibility so that by 1953 there was not merely one Army PsyWar system, but there were at least five separate organizations in the U.S. Government in different places and at five levels directly concerned with these problems.

Figure 71: Official Chinese Letter. This surrender pass from Korea shows intelligent American use of materials from another culture —The ancient format, in this case, of the traditional Chinese bureaucratic letter.

A curious division of responsibilities not anticipated by the Creel Committee of World War I or the OWI of World War II arose in the Washington of the Cold War period. While the military establishments were given jurisdiction over propaganda activities connected with actual combat, other propaganda activities were kept largely in civilian hands, though simultaneously the direction of civilian policy at its very highest level became para-military through the influence of the National Security Council.

In other words, most of the national foreign-policy decisions at the highest level have been dictated in recent

years by strategic considerations. They have been National Security Council decisions, not Cabinet-type decisions of the kind which might have been made in the years of William McKinley or Warren G. Harding. Yet, even though the decisions have been strategic in type, the propaganda implementation of these decisions has fallen for the greater part on the State Department and on the economic aid program facilities, not on the military. The military have been pretty strictly confined to those aspects of propaganda which directly pertain to combat areas. By 1953 U.S. leaders had begun to understand the situation with which they had been dealing since 1947 and in light of that necessarily belated but correct appreciation of their own position, the William Jackson Committee began to recommend that propaganda policy be written not as something self-contained, but be considered an integral part of every other U.S. Government decision possessing world situation or news impact.

The Cold War and the Home Front.

Among editors, professors, officers, officials, and other experts concerned with foreign affairs, there has been frequent lamentation that the American people did not take the great struggle of our time more seriously. The contrary should be argued, at least by way of contrast.

If it is true that the United States is engaged in a major struggle, if it is further true that this struggle has no visible end, if this struggle threatens all of us and our children as well with lifetimes of tension and violent deaths under ultra-destructive weapons, one may quite reasonably ask the question, *Which is the better reaction for the bulk of the American population: normality, emotional health, mild irresponsibility, and the stockpiling of nervous and physical strength for a time of trial which may lie far ahead; or,*

alternatively, tension now, worry now, responsibility now, fatigue now, all the way through from the uncertain present across the bitter and perilous future to the months of near-Armageddon which may lie fifteen, twenty, or thirty years ahead?

Sadly and seriously, with no attempt at cleverness or mockery, a staff officer could argue today that the American people should leave their worries to their leaders so as to be strong when the time of trouble comes. In the field of civil defense, for instance, it is grotesque to spend billions on offense and little on the saving of American lives. On second glance, this may not be so grotesque after all. The technological advance of fissionable and thermonuclear weapons is so rapid, the development of guided missiles and other carrying instruments so swift and so unpredictable, that a 1955 model civil-defense system might become a fool's paradise by 1960. If this be true, it is better to live as well as we can to maintain the profession of arms at an adequate level, to hope (quite irrationally) for the best, and to let the dead of the future bury their dead as best they may.⁴⁷

Alternatives to Victory and Defeat.

In a cold war, as opposed to a war, the role of the armed services is to deter the enemy, not fight the enemy, and the purpose of the government is to achieve an accommodation (in the sense of an arrangement satisfactory to both sides), not a victory. If this is correct, serious reappraisal must be made of the U.S. PsyWar position as well as of our strategic thinking.

The alternatives to victory and defeat are forms of survival of the competitors. The entire health of each competing civilization matters. It is obvious enough to

Americans that we must remain prosperous, free, constitutional, democratic. It goes without saying that we must, as far as our individual fortunes permit us, retain our belief in God and derive from religious beliefs those spiritual strengths not available to the Communists. What is not often raised is the equally important factor of *the conquest of probability*.

Wars are much more often won by people who are sure they are going to win than by people who know that they would *like* to win, but who think at the same time that they *will* probably be defeated. The over-confidence of a Cortez or a Mao Tse-tung may seem insane to many of us. With the passion for security so prevalent in individual and national lives, both the Western powers and the individuals comprising them grotesquely exaggerate the margin of safety which they need in which to survive.

Part of this springs from the fact that much of our civilization is not forward-looking, that neither young Americans nor old Americans have a clear-cut or hopeful picture of what the world should be, will be, and must be, by A.D. 2055. On the Communist side it is frequent, but not universal, to discover that the best Communist cadres are made up of men who are dead sure that Communism will win, who are equally sure that Communism does not have to be right in order to win, and who are sure that "objectively and scientifically" (whatever that may mean), the Communist system is almost certainly destined to succeed. If Communism cannot get out of succeeding, the responsibility of the individual Communist becomes bearable; he is still seriously and tragically responsible for the expediting or the delaying of the inevitable, but he does not take the mantle of God or Karl Marx and state that this is the world as he wishes it to be and that the world of his desires will come into existence if, and only if, he fulfills his personal responsibilities to the utmost.

In Asia, perhaps more than in Europe, there are many persons who are turning toward Communism, not because they think it is good or just, or even because it is powerful, but simply because it is *likely*. Every individual in his own life has known that he cannot undo the passage of time, the aging of his body, the death of his loved ones, the loss of opportunities which might have been seized, or even his own death; in their individual lives men of all nations perform the feat, characteristic of the human being and apparently shared by no other species of life, of living from day to day in a constant reconciliation of the past and present with their own estimate of the probable future. At times in history, *that which should happen* seems to be unleashed like spiritual lightning and men rally in frenzy around causes which for the year or the decade seem inspiring, terrifyingly beautiful, and within human reach; through most of history, *that which is apt to occur* provides a more sober guide to the future and men prepare to live in accordance with its standards.

In the battle of the probabilities the PsyWar of the Western powers has been weak, high-pitched, and uncertain, while the insistence of the Communist themes has been as monotonous and hypnotic as a jungle drum. For better or for worse, the Communists have broken a path through to what they think to be the future; we of other nations have not.

The chief element of anti-Communist victory—practical, sober expectation of a certain and final downfall of the Soviet system—has thus far been lacking on the anti-Communist side.

The Communists, on the contrary, have unreasonably, provocatively, and untruthfully raved, screamed, shrieked, and lied to bring about that better world which, curiously enough, their most effective cadres considered to be an inevitable world. Thus the UN prisoners held by the

Communists during the Korean war were subjected to a constant bombardment of Communist propaganda concerning their personal responsibilities before history and the opportunities which they would have to serve peace and mankind, as these noble concepts are set forth on the Red side.

The End of the Cold War.

If the hypothesis set forth above (page [251](#), note 3), namely, that the Cold War may turn out to be unendable war except in terms which no living man can visualize, it may be true that appreciation of the role of psychological warfare (whatever it may later be called) in this struggle may have to wait a few more years. One factor often overlooked on the American side has been the *limitation of the originators*. Propaganda, to be effective among foreign peoples or foreign armies, cannot and should not outrun the strategic capabilities or the political intentions of the issuing power.

It does no good for an American propaganda radio to pledge battle to the death while the U.S. press services amiably discuss an accommodation with the Communists. Comparably, an official propaganda plan to make the people of France feel that the Americans love and admire them is not very realistic if, in terms of column-inches of French press material, unofficial American utterances are related to France to the effect that the French are washed up, their cause in Indochina hopeless, their economy unviable, and their political goals foolish. The years 1950-54, during which the Korea struggle took place and in which NATO and the European Defense Community (EDC) came to prominence, often showed a proclivity on the part of U.S. official propagandists to go far beyond that which their home public

would support. Need it be said that the effects on foreign public opinion were possibly deflationary?

An imaginable end to the Cold War may lie in neither victory nor defeat, in neither accommodation nor reconciliation, but in the development of more, newer, and different quarrels. Hostility of Protestant and Catholic faded out in Europe when the hostility of French, Germans, Spaniards, and other nationalities came to be more important. It is a problem for the psychiatrist and sociologist to answer if they can. Is it possible that semantics of war-causing quarrels can be superseded by anything other than *different* quarrels? A tension-free civilization is imaginable; given the characteristics of most present-day cultures it is scarcely more than merely *imaginable*.⁴⁸

If within the limits of practical possibility one were to list the hypothetical requirements for an end of the Cold War, the following might stand forth:

- (1) General war leading to destruction of either the Communist or non-Communist systems; *or*
- (2) Prolongation of the present Cold War atmosphere until new and more interesting quarrels arise which make the present ones obsolete; *or*
- (3) Reconciliation of the Communist and anti-Communist systems, by some process not now imaginable, along the general lines of Franklin D. Roosevelt's "Grand Design;" *or*
- (4) Collapse of all major civilizations under impact of fissionable and thermonuclear weapons; *or*
- (5) Gradual erosion of the anti-Communist world and an eventual Communist victory by sustained Communist successes short of war—or the alternative of gradual erosion of the Communist world and the creation of a

constitutionalist and libertarian probability of victory, also without the outbreak of general war.

It would be a brave and foolish man who would say which of these the world should expect, but it would be a stupid staff officer who did not anticipate at least one of them and who did not as a military officer or government official do his best to bring about "victory" in a form which his side could define, recognize, welcome, and achieve.⁴⁹

The Seven Small Wars.

The foregoing extensive discussion of the Cold War has been included because it explains a great deal of the apparent contradictoriness, irresoluteness, and uncertainty of the small wars which have occurred since the end of World War II. The seven small wars fall into a threefold pattern, if China is excluded (China is taken up in the next section). This is the first pattern; five of the seven wars were Asian struggles against the Western powers: Korea, Indochina, the Philippines (in which Communist Filipinos regard the United States as their ultimate enemy), Malaya, and Indonesia. In Korea and Indochina the struggle came to be Communist-controlled. In Indonesia the struggle ended in a nationalist victory. In the Philippines the struggle degenerated into petty skirmishes between a native constitutional government and Communist extremists. One war was an expression of European nationalism on the soil of Asia, with the creation of the new state of Israel. The third category is, of course, the special case presented by the Indian-Pakistani fighting which is a struggle between Asian nationalisms without much intervention from either European colonialism or Communism.

The most important of these wars were the five in Korea, Indochina, the Philippines, Malaya, and Indonesia. The

Israeli struggle appears pretty well settled as a fighting war and the India-Pakistan issue appears not to be one which will lead to general war between those two countries. The predominant group of wars shows variations of the same components in different quantities.

Each was a reaction to the fall of Japan's short-lived East Asia military empire. Each involved partial or complete resistance to economic affiliation with the capitalist world. Each had an ingredient, though these differed in stress and direction, of local Asian nationalism. Except for Indonesia, each eventually became a part of the world-wide front between Communism and anti-Communism. These wars deserve consideration one at a time for their PsyWar content.

Figure 72: Intimidation Pattern. A Korean-language leaflet maximizes the threat to enemy ground personnel of U. S. air operations. The enemy dug in.

The Special Case of China.

None of the wars mentioned above was as bloody or as tragic as the Chinese civil war between Communists and

Nationalists which ended with a Red victory in 1949. The China situation is too complicated to be summed up in a single paragraph. The political, economic, and propaganda components on each side of that war are as yet not completely assessed.

For instance, one of the major factors in the defeat of the Nationalists consisted of the withdrawal of the Japanese managers and technicians from China as well as of those Japanese troops who had been maintaining a degree of law and order in Manchuria and North China. This withdrawal was not only sought by such "progressives" in the State Department as John Stewart Service and Alger Hiss; it was also enthusiastically endorsed by conservatives such as General Wedemeyer, who shipped the Japanese out and General MacArthur, who received them. No American, right-wing or left-wing, seriously proposed replacing the Japanese with United States or United Nations personnel until the Nationalists had enough trainees to manage a modern, capitalist China. By withdrawing the Japanese the Nationalists and the Allies destroyed the political and economic system under which the Nationalists proposed to operate and were then astonished when the Nationalists met defeat.

In the China policy situation the contribution of Communist covert propaganda within the United States in preventing aid to Chiang in the crucial years of 1947, 1948 and 1949 should not be overlooked; neither should it be overestimated nor considered the sole determinant of events which took place within China.⁵⁰

PsyWar in the Indonesian-Dutch War.

A rapid and talented command of propaganda was shown by the Indonesians in their retention of power in the face of a

Dutch landing in the islands in 1945-46. The Indonesians were readily alert to the necessity for obtaining U.S., British, Australian, and other foreign sympathizers. They opened propaganda offices abroad and did an excellent job of presenting their own case. While Indonesian combat propaganda against the Netherlands troops is not recorded as having had much effect on Dutch morale, their use of global strategic propaganda to support a local war was excellent. Netherlands ships were refused docking and loading services by Australian stevedores. American press and public sympathy ran very largely in the Indonesian favor. Indonesian acceptance of the political concept, "United States of Indonesia," which was dropped as soon as independence was won, may have played a significant role in winning American sympathy.

Figure 73: Communist Wall Propaganda. Wall messages have been ubiquitous in China for many years, leading one wit to accuse the Chinese of "mural turpitude." Here the ancient Chinese device has been turned against English-reading personnel.

Dutch military and strategic propaganda in their war with the Indonesians suffered from uncertainty on the Dutch side as to the goals of the war, the suspicion that a Netherlands victory would be nothing more than a triumph of colonial capitalism, and the insistent interference of United Nations

and United States observers. The Dutch were never able to put across the point that Indonesia derived its nationhood from Imperial Japanese sponsorship and the Netherlands withdrawal was dictated as much by the practical necessity of reconciling world opinion and balancing the home budget as by the militarily untenable nature of the Dutch enterprise.

The Philippine War Against the Huks.

By contrast, the Republic of the Philippines faced a very serious military situation in the challenge of the Huk armies—tough Communist troops concentrated in central Luzon—who waged a cruel and bitter war, rather like the struggle of the Irish Republicans against the Black-and-Tans. By 1950 the Philippine Government was in a serious position. There was at least the remote possibility that if the Government continued to falter, the city of Manila might have fallen to a Communist *coup*.

In this situation Ramón Magsaysay, as Secretary of Defense, developed some of the most provocative and audacious anti-guerrilla operations of the postwar period. To meet the Communist claim that the struggle was one of the landless against the rich, he offered all surrendered Huks resettlement in a new land project; he visited the project himself frequently enough to make sure it remained a valuable demonstration area. To allow the common people to help the Government, without their suffering from Communist reprisals against themselves or their families, he disseminated secret methods whereby the people could communicate with the Government forces. He established a psychological warfare office under Major José Crisol. This office was doing as good a job of tactical PsyWar with leaflets, mimeographs, loudspeakers, light planes, and other field and headquarters equipment as any army installation

which the author has seen. Most of the doctrine and procedures for the operation of the office were American, but the content of the materials was Filipino. Catholicism, Filipino patriotism, Malayan nativism and peasant common sense were some of the factors used to underscore the Philippine Army's appeals. In the following three years the Huks shrank seriously although the danger could not be said to have been eliminated altogether.

Indochina and Political Warfare.

With devotion, often with heroism, frequently with brilliance, the French military forces in Indochina fought a Communist-captured nationalist movement known as the Viet Minh; they fought despite the accompaniments of a wretched and vacillating home policy, incredibly poor psychological relationships with the native élite, and security situations which pass all American belief. (One Vietnamese recently told the author that the pro-Communist Viet Minh soldiers fought as long as they could against the French and then came back to French territory to eat good food, visit their families, rest and relax before returning to the field to murder more French sentries, blow up more French patrols, or attack more French outposts.)

It ill becomes an American to criticize the French for their policy in Indochina since it was by virtue of a U.S. strategic decision and a U.S. logistical action that Indochina was turned first from Japanese hands into the hands of the British in the south and the Chinese Nationalists in the north. The British did not care much about the local situation. The particular Chinese Nationalists in northern Indochina were mildly sympathetic with local nationalism, but chiefly preoccupied with stealing everything that could be put on a truck. After this ill-fated liberation the Americans then assisted the French in transporting forces back to

Indochina. This was after much of the U.S. press and many U.S. leaders had indicated their disapproval of French colonialism and had given indirect but powerful encouragement to Viet Minh's rebellion against the French. Having helped foul up the situation for the French hopelessly, the United States then observed their return (a return which was definitely, though indirectly, made possible only by U.S. aid to France) with uncertainty and disquiet. It took the Americans four years to decide that they were on the French side and even then they were not very much on the French side.

Neither were the French.

The "French side" was an indefinable amalgam of old-fashioned French colonialism, the membership of three small Asian states in a French Union, and anti-Communism. The French made the mistake which the Americans repeated when they invited the Chinese Communist general, Wang Hsiu-ch'üan, to New York to defame the United States through the courtesy of the United States Government, or when they tried dealing with the Chinese Communists, fighting them, dealing with them, and fighting with them again. When the French finally decided to seek an all-out military victory against the Communists they set up local governments which they themselves promptly dishonored, giving them neither prestige nor authority enough to combat the Communist menace in local Asian terms.

That the French should have held the Asian anti-Communist front under these strange political circumstances is a credit to France. The Indochinese war has been dirty, discouraging. It has often verged upon the hopeless. The French have been criticized by the Americans in the early period of the reoccupation of Indochina for not turning the country over to Communist "nationalists" lock, stock and barrel; later the Americans criticized the French

because the French did not annihilate the same "Communist nationalists" whom the Americans had previously lauded. In the end, Dien Bien Phu and Geneva were the inevitable concomitants of Panmunjom. Once we made "peace," the French had to make an equally bad "peace" too.

The United States was adroit enough to obtain the immense psychological leverage of getting the Korean war recognized as a UN war. The Indochinese war was not made a UN war even though it was the same enemy who was being fought—Asian Communists underwritten by Peking and guaranteed by Moscow—in each case.

Amazing though it may seem, practical psychological warfare was almost completely neglected by the French until the Americans supplied the French with printing facilities for French Annamite leaflets in 1950. By 1952 the French had assigned staff officers to carry out psychological warfare responsibilities and were making a serious effort to link up with the other anti-Communist forces in East Asia for the purpose of obtaining psychological warfare know-how. A considerable improvement in tactical psychological warfare was made between 1950 and 1952. The strategic psychological warfare position of the French in the area must be referred back to the "battle of the probabilities," mentioned earlier in this chapter. So long as French, Americans, and Annamites all feel that a French defeat is quite probable and say so both publicly and privately, it will be difficult for the French to make the Indochinese believe that Viet Nam, Cambodia, and Laos are here to stay as French-protected and anti-Communist nations.⁵¹

Malaya and the MRLA.

The MRLA, or Malayan Races Liberation Army, is a Chinese Communist guerrilla army operating in the jungles of

Malaya. Malaya (minus the island of Singapore, which is a separate Crown Colony to itself) has been constituted in the postwar period as a federation of Malay sultanates. The British have talked a great deal about the self-government of Malaya, the eventual end of their own rule, and the progress of the people. Everything, or almost everything, which the British say is true—except for the fundamental fact that the Chinese in Malaya can, under British rule, enjoy anything except life, purpose, and honor.

What are "life, purpose, and honor" in basic human terms?

They are the rights to belong to something, to be a part of history, to make one's own world move, to be a human being superior to other human beings, to be vain, to be proud, to be self-sacrificing.

After years of war against the Chinese Communist guerrillas who have small components of Malaysians and Indians with them, the British have not yet found a single British brigadier or major general of the Chinese race. The world at large on the anti-Communist side has yet to hear of a Chinese-Malayan hero who served mankind by falling martyr to the Communist terror or by emerging as victor in valiant heroic combat.

The Chinese in Malaya, as the author has observed at first hand, are probably more prosperous than any other Chinese have ever been anywhere in the world. Under capitalism today the Chinese communities in Malaya have achieved a degree of wealth, health, and education which Communist China will be remarkable to have achieved if it survives and succeeds for the next hundred years.

Does this not give the lie to the great Communist myth concerning Asia—the myth accepted by many Western politicians, intellectuals, and newspaper men—that the struggle between Communism and anti-Communism is a

struggle for living standards? that the issue is an issue of "who will provide the best livelihood"?

On the pro-Communist side in Malaya, Chinese who are not religious and who are known for their practicality and secularism, struggle for the chance to go forth and suffer, to serve in an army with bad medical service and no pensions, to face an almost certain death in the jungle, to lose life and property (which they could keep on the British side) in order to gain that other kind of life—life with honor and purpose, on the Communist side.

The British meanwhile progress, no doubt. In many respects the British administrations in Singapore and Malaya are more enlightened than some of the local governments in the United States. But whatever the reason, they do not seem to belong to the Chinese who live there or even to the Malays. They are governments for the people, and not (so far as the local people seem to judge) governments *of* the people.

Is it reasonable to ask in the mid-1950s that decent British officers and civil servants convert themselves into apocalyptic fanatics of a weird composite Asian nationalism? Can the British make revolution in Malaya when they are rather fatigued with their own Labor revolution at home? Can we Americans, who have made nothing, absolutely nothing, out of the heroism and romance and tradition that might have been reconstituted as the ancient kingdom of Ryukyu (Okinawa), be in a position to chide the British for not doing that which we ourselves do not undertake?

The Communist magic is strong, bad magic. In North Korea it created officers in an unreasonably short time, developed fanatics while we were trying to develop gentlemen, and came close to defeating us in the perilous weeks of the Pusan perimeter. In China soldiers of whom many Americans despaired when they fought on the

Nationalist side became desperate assault infantry under Communist training. The timid and quarrelsome Annamites who had given the French so little trouble before Communism organized them, fought like leopards once they read Marx, Lenin, Mao Tse-tung and Ho Chi-minh.

Was this why the Communists were able to continue in Malaya? No one has ever accused the British Army of a lack of ingenuity. The forces who developed desert raiders, coastal commandos, air-dropped *banditti*, and a plethora of amusing, shocking, and audacious innovations cannot be accused of a lack of imagination.

The British *did* use psychological warfare in Malaya strategically, tactically, in the field, in the cities, by radio, and by print. When Carleton Greene was directing the British PsyWar effort from the headquarters of that redoubtable gentleman, Malcolm MacDonald, British Commissioner General for South East Asia, he even resorted to the device of writing individual letters to known Communists and leaving these letters scattered through the jungle. The British used white propaganda, black propaganda, grey propaganda; if there had been a purple propaganda they certainly would have tried it. Alex Josey came close to it when he shocked the planters in Malaya by delivering socialist speeches over the Malay radio in an attempt to pull the Left wing off the Communist bird.

Sir Henry Gurney, the High Commissioner of the Federation who was murdered in 1952, was a veteran of irregular warfare. He had faced the Zionist terrorists in Jerusalem and was a man without fear. His approach to the problem of confronting Communism was *hopelessly sane*. The Communists were offering young Chinese the intoxication of craziness, of a mad and heroic righteousness to justify the misspending of their lives. Sir Henry's answer was decency, goodness, security, prosperity, authority,

liberty under law. He offered everything except glamor, terror, inspiration, and romance—

Everything except the chance to join the British side.

What kind of British side?

A British side which, like the Communist side, would welcome the makers of the future, the builders of the next civilization, the arbiters of history.

The Communists have presented a high bid against the U.S. and Britain as well as the other Western powers. We have not yet overbid them. The high bid is the opportunity to join, to belong, really to be equal, not just legally equal, and, above everything, to share, to struggle, and to work under conditions of heroism for a common goal.

The Right to Join.

The West has lost a lot of the Cold War in Asia because the Communist side could be joined and the Western side could not be joined. There is no American party in India, but there is a Communist party. There is no anti-Communist army to which cadres of men from either Soviet-occupied or Soviet-free territories can be made welcome. There is no command point for the anti-Communist struggle. There is the promise of immense U.S. help, even the promise of British, Colombian, Ethiopian, and other help, for Korea or other Koreas. Is there much willingness *to be helped*? Is there any way that we can let ordinary Asians in on our side?

The top levels of this problem are, of course, political. They must be solved in the light of a U.S. home public which eschews crusades and dreads adventures. At a lower level the problem becomes one for the military staffs of the future. How can the United States, the United Nations, or other anti-Communist forces recruit native leaders and

native followers under circumstances of dignity and honor? How can we either learn to love the allies we have or to find allies whom we can love? Until then much of the spiritual and organizational advantage in Asia will fall to the Communists. We may have the better ideals, but if people who are determined to illuminate their own lives with the splendor of risky, heroic, or self-sacrificing action (and who insist on doing something desperate somewhere somehow, so as to relieve the ignominy, poverty, and monotony of their existences) cannot learn how to join us, they will perforce join the other side.

A slight or even a substantial increase in economic welfare in the Asian states seems to the author to favor a sharp increase in Communist strength. When people are desperately poor or sick they cannot worry about causes. When they become moderately well off—well enough off to know that they are despised, poor by our standards, ignorant by our standards—then the point of psychological frenzy comes in.

Propaganda Techniques in the Seven Wars.

Neither in the Chinese civil war nor in the seven other wars listed has there been much refinement of propaganda techniques over World War II. As a matter of fact, it took the Korean war two years to come up to the standards of Normandy. It is amazing how many propaganda techniques had become lost arts between 1945 and 1950. The author himself flew *under* the Chinese Communist forces along the Han River in March 1951 when the voice plane in which he rode as an observer had to hug the valley bottoms in order to get its message to the Chinese ground forces past the sound of its own propellers; instead of ingenious, up-to-the-minute gadgets to dispense leaflets the author joined the young officers in the plane in throwing the leaflets out of the

plane door by hand. He thought ruefully about the leaflet bombs and leaflet dispensers which had been used in Europe and in Burma, and when he returned unharmed to Taegu he submitted one more red-hot memorandum recommending the obvious.

Figure 74: Divisive Propaganda, Korean Model. In this leaflet an attempt is made to show the Asians-die-for-the-Kremlin theme.

The strategic PsyWar self-limitations imposed by the United States on the United States in the Korean war were also crippling. The United States did not desire anything which a professional soldier would recognize as victory. U.S. opinion was divided as to whether all of Korea should be liberated by UN forces. At the policy-making level—certainly among our allies—there was pretty general agreement to remain at peace with the supply dumps and high command of the Chinese Communist forces in Manchuria and China while fighting the forward echelons of those forces in Korea. The United States would not accept defeat nor would it seek a decisive victory because victory might have involved the risk of war.

Under these conditions it must be pointed out that General MacArthur had the first and only PsyWar establishment ready to operate the moment the Korean war began. Col. J. Woodall Greene ably managed the Tokyo headquarters for most of the period of the Korean war. The Department of the Army showed great good judgment in

bringing back Brig. Gen. Robert McClure, who had been Eisenhower's PsyWar chief in Europe, to the new Department of the Army's PsyWar establishment which was created on 15 January 1951 in the Pentagon as a part of Special Staff, United States Army, with the title of Office of the Chief of Psychological Warfare (OCPW). When General McClure departed for Teheran, he was succeeded at OCPW by Brig. Gen. William Bullock. The last period of the Korean war found Korean local PsyWar at the headquarters of Eighth U.S. Army in Korea (EUSAK) under the command of Col. Donald Hall, who had probably seen more continuous PsyWar service than any other officer in the U.S. Army.

CHAPTER 15

Strategic International Information Operations

From 1776 to 1945 the U.S. system of government managed to survive in a world comprising many types of government without setting up its own propaganda and agitational forces. Propaganda through most of the twentieth century was pretty clearly limited by the U.S. conception of propaganda as a weapon auxiliary to war. "Psychological warfare" became proper, in conventional American terms, only when there was a war to be won. With the coming of peace in 1945 there was considerable uncertainty as to whether the United States should have a propaganda establishment at all.

Even at the time of writing (1954) there is still some doubt as to whether the United States needs propaganda facilities. The William Jackson report of July 1953 indicated that the terms *propaganda* and *psychological warfare* were unsatisfactory. Of course they were. They still are. The world

itself is unsatisfactory—in terms of the traditional, humane, rational U.S. point of view.

The story of U.S. "peacetime" propaganda since the end of World War II is a very complicated one. Quantity, direction, purpose, and quality have shifted with the various turns of the international situation. The subject has become much more difficult to write about since the time the first edition of this book was written in 1946.

In the first place, governmental secrecy has been very sharply restored. Even very routine State Department operations for putting across the U.S. point of view have been shrouded in masses of classified documents. For reasons not always evident to the outside observer, the assumption has become prevalent that the normal operations of the United States Government should be kept confidential, secret, or even top secret. Often it would seem that the attempt to maintain secrecy in non-sensitive functions is not worth the security effort at all or, contrariwise, may even reassure the antagonists of the United States by not letting them realize how serious and how unfriendly our plans or policies with respect to them may be. (This is not the time or place to discuss the problem of secrecy as a protection against domestic criticism—which secrecy, of course, has often become, to the detriment of both the government and the citizens of the United States.)

In the second place, not only have information activities become more hush-hush: they have also become more complicated. It is difficult to do justice to an intricate moving panorama of activities, some of which may not be mentioned or described under existing law.

Demobilization and Remobilization.

The ending of the OWI and the installation of the International Information Service, mentioned above on page [184](#), in turn changed into the information activities of the Department of State. These were headed from 1945 to 1953 by an Assistant Secretary of State for Public Affairs. In 1953 a Director of the United States Information Agency, *not* under the Department of State but mysteriously attached to the National Security Council, was inaugurated. The overseas operating component of USIA remained the United States Information Service (USIS), transferred from State Department control.

In other words, there were eight years in which the Department of State had primary responsibility for the conduct of peacetime propaganda of the United States. This was the first and only time that the United States Government had in a period of relative peace undertaken a sustained propaganda effort.

The effort had ups and downs because neither the citizenry nor the officials knew whether the country was in a condition of peace or at war and, if at war, at war with *whom*. To some the enemy was Communism, the ideology; to others, Communism the movement; to still others, the USSR; to others, the Korean Communists, but not the Chinese Communists; to others, the Chinese Communists in Korea, but not the Chinese Communists in China; and so on, *ad infinitum*.

The general history of these eight years was, by and large, a first phase in which the United States demobilized or destroyed propaganda facilities which had been built up with great skill and at great cost during World War II, and a second phase in which those facilities were partially rebuilt and the skills rediscovered. The low point in this development was probably the winter of 1947-48.

For a while, the rumor went around Washington that the Secretary of Defense, Louis Johnson, would not tolerate the utterance of the words *propaganda* or *psychological warfare*, and that the Secretary of the Army, Kenneth C. Royall, refused to have the topic mentioned to him. That may be the exaggeration characteristic of newspapermen, but it epitomized the spirit of that time.

While "psychological warfare" almost disappeared from the Department of Defense and the three services during this low point, the State Department never quite demobilized. For one thing, the State Department had inherited the OWI facilities and the Army facilities in the occupied countries—Austria, Germany, Korea, and Japan. As the heir to substantial informational facilities the State Department kept a certain minimum activity going. Facilities such as American Broadcasting Station in Europe (ABSIE), Radio in the American Sector—of Berlin—(RIAS), the Information Control Commands in the American Sector of Germany, Information and Education (I&E) Section of the General Headquarters of the Supreme Commander for the Allied Powers (SCAP) in Japan—these (though sometimes renamed) represented going propaganda concerns which required a Washington command post.

Meanwhile, it became standing operating procedure in the U.S. diplomatic establishment to attach some kind of an informational facility to every diplomatic establishment and to most of the major consulates.

Since there were always advocates of complete propaganda dismantlement, as well as enthusiasts for the maintenance of information programs, the issue of remaining in the propaganda business or getting out was always more or less in doubt. The economy and the demobilization phases of 1947 and 1948 were stimulated by evidence of Soviet bad faith in Europe during 1949 and

brought into sharp focus by the outbreak of the Korean semi-war in 1950.

It is not possible to do justice to all these different systems in a single phrase. Even as late as the present, it is sometimes difficult to determine why the U.S. need have an information program operating in such entirely friendly countries as Cuba, Haiti, Ireland, or Australia. There is some point to the argument set forth by ultraconservatives that what was good enough for Theodore Roosevelt ought to be good enough today; that, in other words, the United States should be known for what it is and not by what a few hired promoters can say about it.

As in so many other fields of activities, however, the past is irrecoverable. The United States can no more return to the pre-atomic age in propaganda matters than it can in defense matters. The world we have built is with us and the only alternative to survival seems death. With respect to the specific field of propaganda, this leads to occasional curious political alliances. Sometimes the conservatives in U.S. politics are so conservative they want no propaganda at all; at other times these same conservatives are so anti-Communist that they want more propaganda. On occasions the Left within the USA has viewed U.S. propaganda with alarm and at other times has demanded that there be more of it and that more of the content be Left.

Assistant Secretary of State for Public Affairs.

The Assistant Secretary of State for Public Affairs has been the principal officer of government responsible for the conduct of U.S. propaganda during 1945-53. His successor, the Director of the United States Information Agency, faces very closely related problems. Fortunately, one of these Assistant Secretaries of State has written an excellent book

relating his experiences and the problems of his office in detail. Edward W. Barrett in his *Truth is Our Weapon* (New York, 1953), describes his own experiences with two years in that position. The Assistant Secretary had the help of an interdepartmental committee which, under various labels and with various degrees of secrecy, attempted to coordinate the foreign informational activities of the various departments of the United States Government to common goals.

Later, as will be described, the Assistant Secretary of State for Public Affairs was supplemented by a Psychological Strategy Board outside of the Department of State and still later by a White House assistant in charge of informational policies at the highest level.

What can be said of this first U.S. peacetime performance in the propaganda field?

The Assistant Secretaries themselves have been men of varied capacities and interests. Mr. Barrett was an OWI veteran and a journalist of high standing. George Allen was a tough-minded career diplomat. Howland Sargeant was a distinguished government official. William Benton was the founder of the most successful "canned" music system for restaurants and the most vigorous promoter which the *Encyclopædia Britannica* ever had; later he became a Senator. Men such as these can scarcely be called tight-lipped fanatics emerging from the hidden recesses of a U.S. "Politburo." They and their colleagues did a surprisingly good job.

American travelers overseas were often amazed to find that the U.S. propaganda effort was far more polished and purposeful than an observer within the United States could expect it to be. The activities of the Assistant Secretary of State for Public Affairs consisted of supervising the domestic origination of broadcasts directed to the Soviet Union, the

satellite countries, neutrals, and friends. The radio system was generally known as the Voice of America. To this degree he had charge of a propaganda system operated within the United States by Americans, but speaking to foreigners, sometimes by transmitters located within the USA and more often with relay transmitters which picked up programs originating in the continental United States and rebroadcast overseas.

One echelon removed, there were installations attached to the diplomatic and consular establishments of the United States which were usually known as USIS although in some particular cases quasi-private facilities were sponsored instead. In each foreign country there was at the embassy or legation level a Public Affairs Officer (PAO) who was the information specialist for the diplomatic mission and—in theory at least—in charge of all U.S. propaganda or informational activities, whichever one preferred to call them, in the country to which he was accredited.

A complex hierarchy of officials routed, relayed, screened, and coordinated programs from headquarters to the PAOs in the field and proposals or requests from the PAOs back to headquarters.

Other U.S. Facilities.

A complicated element in the State Department's conduct of propaganda was the fact that at no time did the State Department enjoy even a monopoly of the *governmental* mass communications of the United States abroad. (It goes without saying that at no time did the State Department achieve or seek control of private U.S. mass communications such as the international editions of *Time* and *Newsweek*, the circulation of American books and magazines on a commercial basis, commercial American-

owned publications abroad, or the like.) At the very least level of competition the State Department had the Armed Forces Radio Service (AFRS) broadcasting to most of the countries in which the State Department was active—often broadcasting in quite a different tone of voice and with very different content. In many instances, foreigners who understood English preferred to listen to the lively radio programs transmitted for the edification of U.S. service personnel stationed abroad, rather than to listen to "canned" programs made up for the benefit of themselves as a foreign target. (The author has seen Chinese shopkeepers in Singapore listen very seriously to a sergeant giving the news of the day at dictation speed from an armed services transmitter somewhere in the Pacific Ocean area.) In 1948 there was virtually no coordination between the armed services and the Department of State. As time went on, the two sets of U.S. broadcasts took a certain amount of note of each other. Coordination was not as easy as it might seem on paper.

After all, what is one to do? Is it valid to "propagandize" our innocently cherubic service personnel abroad whom so many domestic purity leagues and local pressure groups are anxious to defend? After all, these service people possess fearful weapons. Each has a Congressman to whom he might write. But if service personnel in a foreign country are to be given nonpropaganda materials, how can the same area be given propaganda materials for the benefit of the indigenous personnel? The propaganda from the United States Government must not be too much at variance with the "nonpropaganda" of the United States Government. If the two extremes of communication were too far apart, the United States Government might look like an ass. That would be most unhappy.

Over and above the contradictions and difficulties involved in the operation of at least two governmental

systems and many private systems of U.S. news communication and dissemination systems in foreign areas, there is the further problem of additional U.S. facilities. Sources such as *The Washington Post*, Joseph Alsop, James Reston, and other well-informed Washington journalists often hinted gloomily and darkly that U.S. cloak-and-dagger operations are still going on; Dorothy Thompson was often troubled by what she regarded as the feckless successors of the wartime OSS. Many times Americans resident in local areas concerned seemed never to have heard of the hush-hush operations in their own overseas homes, operations which were denounced with purple prose in Washington; we can say that covert operations, when they have been really uncovered, as in the case of the *Time* story about overzealous U.S. support of a German nationalist resistance group, turn out to be much more pale than the lurid columnists or inside stories from Washington would lead one to believe.

More serious have been the duplication, and triplication, and occasional quadruplication of *official* informational activities. The overseas economic and military aid program, known successively as Economic Cooperation Administration (ECA), Mutual Security Administration (MSA) and Foreign Operations Administration (FOA) has not only supplemented the existing leaflet, broadcast, and other informational activities of the State Department and the armed forces with a third set of information programs; it has itself had a fourth rival in the Point Four administration, the Technical Cooperation Administration (TCA), which was both a part of State and not a part of State, depending upon the particular situation overseas.

Radio Free Europe and Radio Free Asia.

Over and above the Government's operations in this field there have been the quasi-private undertakings of the Committee for a Free Europe and the Committee for a Free Asia. These have been privately sponsored and privately financed by altruistic organizations dedicated to broadcasting those things which the State Department finds it impolitic to put on the air. The degree of governmental contribution or participation is not known, although it is often touched upon in the U.S. press; that the organizations are to a definite extent private is evident in their ability to broadcast local and controversial news to particular Iron Curtain countries and by the fund drives which they have waged with little contribution boxes inside the USA.

The advantage of the RFE and RFA type of operation is that by giving voice to independent nongovernmental resistance to Communism it has often been possible to go far beyond the limits which intergovernmental protocol would impose upon U.S. official broadcasts. That is, the United States can scarcely describe a deputy minister in the Rumanian Government as a scoundrel, thief, pervert, or renegade; Rumanian exiles allowed access to Radio Free Europe stations need have no such limitations. On the other hand, there is the difficulty that Radio Free Europe, because of its U.S.-based finance and management might lend an unnecessary U.S. sponsorship to genuinely independent anti-Communist undertakings. Here again, as in the case of the reconciliation of the State Department and Defense broadcasts, it is impossible to draw a doctrinal rule which would prescribe on one hand that all propaganda broadcasts should be unofficial or that they should all be official. One cannot even say that they should all be coordinated.

The Psychological Strategy Board.

Coordination was nevertheless attempted—at least for the governmental side. In 1951 President Truman created the Psychological Strategy Board, bringing the versatile and judicious Gordon Gray back to Washington for the purpose. The prescribed role of the Board was to coordinate, plan, and phase all United States information policies so as to achieve maximum effect from the governmental effort; not once did the Board dare reach out for a penny's worth of jurisdiction over private U.S. facilities. The Psychological Strategy Board was only originally under the chairmanship of the Director of the Central Intelligence Agency, then General Walter Bedell Smith, with the members of the Board consisting of the Under Secretary of State, the Under Secretary of Defense, and the Deputy Director of what was at the time known as ECA, later MSA. The Board had a series of able staff directors and small staffs detailed from other Government departments on a permanent basis to serve as a working secretariat. The precise operations of the Board were cloaked in extraordinary secrecy. It cannot be said that U.S. propaganda worsened in the two years following the establishment of the Board; neither can it be said that U.S. PsyWar operations scored any coups so striking as to deserve a position in the annals of international affairs.

William Jackson Report.

After the Republicans came into office in 1953, President Dwight D. Eisenhower moved to overhaul the information establishment. He appointed a committee under the chairmanship of William Jackson, a former OSS official and investment banker, and under the secretaryship of Abbott Washburn, who had headed the superlatively successful advertising department of General Mills, Inc., which had successfully given away millions of prizes for millions of box tops from cereals consumed by American youth or flours

relished by the American housewife. Some of the liberal press commentators eyed the committee gloomily as it went to work. Nevertheless, that portion of its report which was made public turned out to be a document of remarkable finesse and sophistication.

The report, released in July 1953, pointed out the Psychological Strategy Board had erred in trying to plan informational activities in its own light instead of considering the *informational aspects* of every single U.S. Government activity possessing international significance. The report recommended the replacement of the Psychological Strategy Board by a more realistic policy-coordinating organization which would coordinate not merely propaganda policies, but all policies and, having coordinated all policies, would then resolve upon maximum psychological exploitation of the policies which had been decided.

In a sense this is rather like saying that the United States should have a President, since the powerful chief executive of this government has, since 1789, been the final arbiter of executive matters, both foreign and domestic. In another sense it can be interpreted to mean that the responsibilities of the Presidency are so great that no one man could perform in his head all the staff work necessary to see through the opinion-reactions which might develop abroad to U.S. executive decisions made here at home. If the latter supposition is true, it means that the United States is saddled with one more intricate governmental process made necessary by the closeness, dangerousness, and importance of international affairs in the lives of Americans and their government.

Operations Coordinating Board.

On 3 September 1953 President Eisenhower, then at Denver, Colorado, issued an Executive Order abolishing the Psychological Strategy Board and creating the Operations Coordinating Board. According to informed press comment at the time, it was the intention of the White House to carry out the recommendation to this effect made by the President's Committee on International Information Activities. The new Board was located immediately under the National Security Council. C. D. Jackson was a significant member of the Board, but not as chairman; the chairman was Walter Bedell Smith. Besides General Smith, then Under Secretary of State, the Board included Harold E. Stassen, Director of the Foreign Operations Administration; Allen W. Dulles, Director of the Central Intelligence Agency; and Roger M. Kyes, Deputy Secretary of Defense. The President also directed that Theodore C. Streibert, Director of the U.S. Information Service, make himself available.

In so far as this development represented an attempt to coordinate the framing of U.S. Government policy in such a manner as to achieve maximum impact on the rest of the world, it represented a major step forward. The de-emphasis of "psychological warfare" or "psychological strategy" as operations which could somehow or other be efficacious *without* a context of material support through the real-life behavior of the Government issuing the propaganda was a healthy sign indeed.

Psychological warfare is at best a cumbersome and pretentious label for an important modern political and military weapon, the use of mass communication. The definition of empirical "psychological warfare" given in Chapter 3, and reproduced as it was originally written in 1946, makes it perfectly plain that the term acquires specificity which is made plain by the particular individualities involved undertaking the operation at any given time: psychological warfare is not an ancient term

which is so well defined by the usage of centuries that modern men would be ill advised to redefine it or to sweep it aside.⁵²

Indeed, the basic weakness of the term *psychological warfare* is its pretentiousness within American civilization of the 1900s. No one now knows whether the United States of the 1960s will turn out to be dynamic, forward-looking, insistent upon its own view of the world. It is difficult in the 1950s to see how the next decade or so could bring forth anything as explosive or violent in the social and political field as the atomic bomb has been in the field of fission. The United States certainly does not seem to be on the threshold of a new Islam. For better or for worse, the U.S. strengths are the strengths of sobriety, calmness, health. They are the strengths of *living* as opposed to the strengths of *revolution*. Revolution may be strong; it may even be pleasurable to some persons involved, but as Denis W. Brogan has pointed out in his *The Price of Revolution* (Boston, 1952), revolution has a cost factor which must be weighed against the results expected from it.

In the context of mid-twentieth century affairs it is almost pitiable and endearing to see us Americans of this time, who are so little given to the drama of fanaticism or the salvation of the world through cruelty, attempting to dramatize our own modest and reasonable operations by giving them melodramatic and pretentious labels. If the Communists torment us long enough they may make us into alert brutes; this seems doubtful now. It seems probable that we will continue to be brave without becoming fiendish in combat, strong without becoming ferocious in peace.

Varying definitions of PsyWar are adopted by official agencies from time to time. The current (1953) Joint Chiefs of Staff definition runs as follows:

"Psychological warfare comprises the planned use of propaganda and related informational measures designed to influence the opinions, emotions, attitudes, and behavior of enemy or other foreign groups in such a way as to support the accomplishment of national policies and aims, or a military mission."

This definition differs from the one given in Chapter 3 in the following important respects: it stresses the *planned* character of PsyWar; it restricts the pertinent measures to those of an *informational* character; and it makes clear the operational goals. It is not clear why it is necessary to stress the element of planning of PsyWar as distinguished from other sorts of war, unless it is a homily to the PsyWar operator to keep his functions in line with those of other national activities. The question of restriction to informational character is more serious; it excludes the interpretation that in essence, psychological warfare depends upon warfare psychologically waged. Thus, substantive operations of a noninformational character, adopted and executed primarily for their psychological effect, could properly be called PsyWar. Finally, the specification of goals is chiefly important for the control of the function, and can largely be taken for granted. Therefore, to preserve an inclusive view of the function which will comprise the range of variation in official definitions—including those of one's enemies—the author stands by the definition stated in 1946.

Limitations of the American Originators.

There are illusions about psychological warfare—illusions spread, in many cases, by the overenthusiastic friends of this kind of operation. Excessive claims have been made for the efficacy of propaganda. Sometimes psychological warfare has even been offered as a substitute for war or for

diplomacy. On other occasions Americans have asked that their government do "as well as" this or that foreign government in the propaganda field, forgetting that the United States is a republic and a democracy, and therefore subject to the sharp limitations which republican, democratic governments possess.⁵³

A republic cannot impose a purpose upon mankind.

A democracy cannot enounce a policy and then stick to it for years and decades.

Americans are not Messiahs. The limitations of American civilization over and above our specific political institutions are such as to make it impossible for Americans to lead a fanatical counter-crusade against Communism, or to guarantee to the human race at large that Americans of 1955 promise that Americans of 1975 will perform this or that specific action.⁵⁴

American propaganda is always limited precisely because it is *American*. Even in an age of atomic weapons, to be *American* means, to some degree at least, to be *free*. The people of this country, or at the very least an awful lot of them, *do* have something to do with operating the government. A new election and a hostile House of Representatives can cut off the funds for any project no matter what its merits may be in the eyes of the top-secret planners. The outside world knows this even if Washington politicians and bureaucrats sometimes forget. One can even contradict the title of Archibald MacLeish's famous poem, *America Was Promises*, and state categorically that in the propaganda field, America certainly is not promises. The promise of a tsar or a dictator is usually good for his lifetime, whereas the promise of the United States is good only within the letter of the law—a specific treaty, a definite commercial agreement, a very sharp and very narrow commitment.

There is an American strength in international affairs. This strength does not lie in a propaganda capacity to promise, to threaten, or to commit the United States Government to future courses of action. It lies, rather, in the immense probabilities of American life, in the virtual certainty that the American people will react in such and such a fashion to a new aggression, that the American people will (if attacked) in all probability destroy their attackers, whoever those attackers may be, and that the American people, despite their occasional shortcomings in matters of racial tolerance, political freedom, and economic injustice, will in the long run be solidly ranged behind whatever policies seem to promise equality, prosperity, and freedom for all mankind.

The limitations of the United States as a source of propaganda are sharp. There is no U.S. party line; it is virtually impossible to imagine that within our civilization as we now know it there could be one. There might be an official U.S. line, unanimous and binding upon all federal departments, but the federal government itself is, after all, only one among the forty-nine separate governments operating within the continental USA. The state governments, the cities within them, and the people at large are free to contradict what the federal government may say at any given point.

American strength cannot be sought in unanimity. U.S. propaganda is incapable of pulling the Sudeten rabbit out of a Munich hat. Short of an intimate and extreme danger of war itself, the U.S. Government cannot threaten a foreign government very successfully; too many U.S. citizens would immediately shout at one another, at their own government, and to the foreigners concerned: "Those Washington officials don't really mean it! We don't want war. We're not going to go through with it." If the USA moved against Spain, there are friends of Franco in Washington who would tell him to sit tight; if the USA moved too rapidly against the Communist

world, there are plenty of Americans, both in and out of government, who would say privately, through the press, or by letters that the Indian Government or some other should assure Moscow and Peip'ing that the U.S. would not dare carry through.

Exploitation of U.S. propaganda strength must therefore always be developed from *the probable or apparent "center" of American opinion at that moment*. It is impossible to find a U.S. policy which can be made compulsory and unanimous upon all Americans both public and private. It is not impossible through an adroit combination of the skills of leadership, foresight, and a keen awareness of intra-U.S. politics to devise foreign-policy programs which will command the decisive assent of the American people.

War and Unanimity.

The less peaceful the world is, the more effective a peacetime information program can be. The attack of the Communist aggressors in Korea, which involved the U.S. armed forces, pushed the U.S. public into line behind the U.S. Government in a way which no degree of propaganda manipulation from Washington could have contrived. In times of danger the American people stick together. In times of relaxation they scatter about. One should not plan a crusade for the American people to carry out unless one is sure that someone on the outside will goad the American people with repeated stings of danger or trouble.

Once war breaks out, the American people have in the past shown a very good capacity to unite in winning and finishing the war. There is no reason to suppose that the situation will be different in the future. What is perplexing, and for the present insoluble, is this: how can the American

people, short of getting involved in war, become so purposeful, so decisive, so nearly unanimous, as to take actions which will prevent a war? The situation in the early 1950s is on the Communist side a major crusade against what the Reds regarded, or pretended to regard, as "aggressive" U.S. capitalist power.

In other words, the Communists of the world had a crusade against the USA. The USA had a crusade against no one. A prominent Washington official long displayed the sign in his office: I AIN'T MAD AT NOBODY. In a very real sense this epitomized one of the very real moods of the American people. How do we defend ourselves against a crusade, especially if we have no desire to have part in a counter-crusade?

U.S. propagandists sometimes forget that they are not speaking for a mere nation, but are the representatives of something which is far bigger than any single nationality—they are the spokesmen, whether they like it or not, for a way of life which is new in the world, for a kind of freedom which, though coarse, is real. Characteristic American strengths have been, are, and will be the strengths of patience, endurance, versatility, and curiosity. It is foolish to ask Americans to be strong in bitterness, strong in hatred, strong in a cruel or proud self-righteousness. We are not Japanese, or Prussians, or Russians; we are not Irish, or English, or French; we are mostly European and yet un-European. Our propaganda will be effective only if it springs from the simplest and strongest aspects of our life at home. Our material prosperity is beyond doubt; what is not so evident to the outside world is the frugality, the kindness, and the humble foresight which drove so much of that prosperity into being.

The Propaganda of Friendship.

U.S. limitations are nowhere more evident in peacetime propaganda than in the oft-repeated phrase of "winning friends for America." The desire for having a friend is a deep necessity amid the crowded loneliness of U.S. urban society. The necessity to "be liked" leads to grotesquely exaggerated inferences as to what "being liked" may involve. Americans in and out of government often argue that America should "make friends" on the naïve assumption that "friends" are useful to nations in time of trouble.

This is, of course, not true.

The Swedes were very good friends of the Norwegians. Nevertheless, the Swedes saved their Swedish skins by sitting back when the Nazis overran Norway.

Did Lithuania have an enemy? Did Latvia have an enemy? Did Estonia have an enemy? These countries were the good friends of all the Western powers. These countries have disappeared.

The United States was a friend of China, a friendship boastfully and sentimentally proclaimed for more than a hundred years, from the days of Daniel Webster to the finale of George C. Marshall. What use was it to the Chinese to have the United States as a friend? When they fell upon trouble, a U.S. Secretary of State denounced their government as corrupt and told the Chinese how good the United States was.

Friendship does not usually lead to war or peace. War and peace depend upon survival. Any veteran will remember men whom he disliked intensely in his own wartime outfits: he never day-dreamed of turning them over to the enemy just because he was personally antagonistic to them. A *common danger from something*—more complicatedly, a *common interest in something*—is a far more potent

assurance of future strength and strategic action than is friendship.

Friendship operates between individuals, not between the overgrown corporate fictions which are called nations.

If you were a West German, and if you were absolutely positive that all Americans were lovely people, you would be wise to join the Soviet side. That way, if the Russians win, you will have appeased the enigmatic and implacable Muscovites. On the other hand, if the Americans win and you are sure they are lovely people as well as good friends of yours, they will not *really* mind your having joined the other side as a matter of temporary factual necessity. If a man is your best friend he may jump into the river to rescue you, should you fall in; unfortunately, he might prefer to telephone a rescue squad. But if he is handcuffed to you, you are reasonably sure that if you fall in he will be with you.

Call it propaganda, call it information, call it international communication—under any name the major point remains: *Americans can find trustworthy future allies through commitment to common interest or common danger.* Friendship is pleasant, but not of the essence. In some cases it might be desirable for leaders or key groups in important foreign areas to realize that the United States could be a *worse enemy* than the Soviet Union, rather than to realize that the U.S. is a friend. If the French were sure of this—that is, that a Soviet-occupied France would get sixty-five hydrogen bombs dropped on it while a U.S.-occupied France would get only three—they might prefer the Americans whether they liked them or not.

Is this kind of communication consistent with American ideals? Perhaps not. Yet *honesty* has always been one of the American ideals and perhaps honesty may take us in the

future to a stronger and a wiser position than friendliness has taken us in the past.

CHAPTER 16

Research, Development, and the Future

Psychological warfare is part of civilization. Civilization, no matter how one defines it, is not a static thing. It is an immense fermenting, active, often turbulent composite of the *whys* and *hows* of the way men and women think and behave. The short-run factors in a civilization are often as important as the long-run ones. Though the United States from 1860 to 1960 has been a steady part of the west European, predominantly Christian civilization, the United States has undergone immense changes of fashion, belief, appetite, preference, and behavior. With any changing, developing civilization, "war" may seem like a very static term, so that the Civil War and the war of the Western powers against Germany of 1939-45 may to some degree seem comparable phenomena. They are comparable, but only within sharp limits.

The Meaning of War.

Nowhere is the transitoriness and changeability of modern civilization more evident than in the significance which intelligent men and women attach to the term *war*. War was "noble" in 1861-65, but in 1941-45 it was "noble" only for the most perfunctory and most hollow oratory. Push the contrast farther: "psychological warfare" was an unknown element in 1861-65; by 1941-45 it had become fashionable. (One can seriously doubt that President Lincoln ever worried about Northern citizens becoming "un-American" under that rubric, though he had plenty of traitors to worry him.) The

years 1945-53 were momentous. A whole string of new ideas, new terms, and new behavior patterns appeared within the USA in a mere eight years. What the next twenty years will bring is deeply uncertain.

War is coming to mean the effectuation or prevention of revolution, not the half-savage, half-courteous armed conflict of sovereign nations. War is getting to be chronic again.⁵⁵ War between entirely comparable states such as the United States and Canada, Mexico and Cuba, Indonesia and India, Iraq and Saudi Arabia, or any similar combination, is getting to be more and more unthinkable. War between ideologically dissimilar states, such as North Korea and South Korea, Communist China and Nationalist China, Viet Minh and Viet Nam, USSR and USA, is getting to be virtual normality.

Research into Tension.

It is true of all people that they solve particular problems, in many cases, some time after the occasion for solving the problem has passed. What is called "decision" in government, politics, and in personal affairs is very often not the selection of one very real course of action as against another equally real course of action, but the confirmation of a commitment already made. If this is true of every-day life, it is even more true of scholars and experts. One of the disabilities of our time in the field of the social and psychological sciences and the humanities lies in the fact that although government officials recognize problems some months or years after they have arisen and finally attempt to deal with them, scholars frequently get around problems decades after any practical occasion for decision has passed.⁵⁶

Nowhere is this more evident than in the discussion of tensions as a cause of war. Tension certainly contributed very much to the outbreak of war in 1914. It is possible that the tensions and hostilities of Europe in the 1930s which allowed Fascism and Communism to become threatening and powerful also contributed in the end to the outbreak of war in 1939. It is difficult, however, to suppose that the coming of war in September 1939 was itself the result of tension except as a very remote and indirect cause. This author believes that tension leads to a perpetuation of a kind of civilization in which wars are possible, but cannot persuade himself that an additional factor of tension within civilization as we know it can be an immediate cause of war.⁵⁷

Research into tensions has been carried fairly far. It may be that the wartime role of tension can be ascertained by scientific methods, so that the psychological warfare of Power A can cause so much more tension than Power B, either among the élite or among the general population, that Power B cannot further continue the war. Alternatively, it is imaginable that Power A may be able to relax tension so sharply among the élite or broad population of Power B that Power B's potentiality for war, or decision to wage war, can be postponed.

For purposes of research it seems worthwhile to suggest that tension appears to be highly prevalent in the two most powerful military civilizations on earth today: the USSR and its satellites, on the one hand, and the cluster of Western powers, on the other. Tension appears to be caused by the complexity of every-day life, the demands made upon the psychophysiological organization of each individual human being, by the technological facilities available, and through the relief offered within each civilization by the opportunity to discharge hatred against members of the other

civilization instead of recognizing self-hatred for the very real problem which it is.

In other terms, it is tough to be modern; the difficulty of being modern makes it easy for individuals to be restless and anxious; restlessness and anxiety lead to fear; fear converts freely into hate; hate very easily takes on political form; political hate assists in the creation of real threats such as the atomic bomb and guided missiles, which are not imaginary threats at all; the reality of the threats seems to confirm the reality of the hate which led to it, thus perpetuating a cycle of insecurity, fear, hate, armament, insecurity, fear, and on around the circle again and again.

Revolutionary Possibilities in Psychology.

It is possible, but by no means probable, that the rapid development of psychological and related sciences in the Western world may provide whole new answers to the threats which surround modern Americans, including the supreme answer of peace as an alternative to war or the secondary answer of victory in the event of war. Nothing in the existing academic literature on the subject of psychology of war, the psychiatry of modern mass behavior, the psychology or psychiatry of present-day power politics, justifies the inference that an applicable solution to our "problems" is at all near. The "problems" are almost all aspects of our entire lives and one cannot solve life like a Delphic riddle or a single scientific experiment.

It would be unwise of U.S. military and political leaders to overlook developing strengths within American every-day talk and thinking, whether academic or popular. Too specific a concentration on the problem of winning a war may cause a leader or his expert consultants to concentrate on solutions derived from past experience, therewith leading

him to miss new and different solutions which might be offered by his own time. Changes need not always be thought of as weaknesses, which they are if past criteria are retained as absolute standards. Men born in the period 1910-20 may have endowments which are not commonly found among men born in the period 1930-40, yet it is entirely possible that the generation born during 1930-40 may have capacities and resistances which the older generation does not altogether appreciate.

Apply this concept to Communism. Communism loses strength every day that it exists: each day deprives it of novelty, each day makes it a littler more familiar, each day makes its leaders one day older. If Americans can learn how to be flexible and imaginative and to understand themselves as they really are, they might find that the real American appeal to the youth of the world would be much greater than the Communist appeal. It was unfortunately characteristic of the United States in the early 1950s of the Cold War that U.S. propaganda was based on ideals and standards *older* than the ideals and standards competitively presented by the Communists, and that therefore in many parts of the world the struggle between Americans and Communists appeared to be a struggle on our side of the old against the young. Nothing could be farther from the truth. The United States army in Korea in 1950-53 was one of the most revolutionary armies in history, an army dedicated to non-victory, pledging allegiance to a shadowy world government of the United Nations behind the practical reality of the government of the United States. Perhaps never before in many centuries have men fought so matter-of-factly, so calmly, so reasonably. They fought well and did not need to be jazzed up with the hashish of "making the world safe for Democracy" or "establishing the Four Freedoms."

The temper of the U.S. forces in Korea in 1951 was demonstrated by a Reserve sergeant who scarcely knew he was in the Reserves until he was on a boat bound for Pusan. He was a practical man, anxious to get home, but willing to do his share in this war as long as he had to. He was given the assignment of testing the voice plane of U.S. headquarters at Taegu. The loudspeaker was not working quite right, and he was instructed to test the plane at 500, 1,000 and 1,500 feet. The plane flew low over U.S. headquarters. The roar of the engines almost deafened everyone within the building, yet even above the roar of the engines there could be heard the bone-chilling hum of the silent loudspeaker—an immense magnification of the noise one hears from a radio set which is turned on without being tuned to a station. Everyone expected the sergeant to say, "This is the EUSAK voice plane testing; one-ah, two-ah, three-ah!" Instead the immense voice came through clearly, through brick, and plaster, and wood, through air and trees. It must have reached four miles. The gigantic voice of the sergeant seemed to roar over half of South Korea as he said, "Why—don't—you—imperialist—sons o' bitches—go—back—to—Wall-Street—where—you—belong?" It was said that fifty colonels grabbed for their phones simultaneously, but the purely American gimmick to the whole story lay in the fact that the sergeant was not punished. No damage was done. The Americans thought their enemies were funny or silly. We had shown that we were not afraid of Communist ideas. Several South Koreans told the author that they regarded the Americans as inscrutable people indeed.

The development of modern civilization is certain to have developments in war both as to the purpose of war and as to the modes of war. It seems likely that in the face of the supreme danger of atomic and thermonuclear weapons nations will resort more and more to small wars and semi-war operations which will offer the opportunity of strategic

advantage without the cataclysmic danger of a world-wide showdown. In a very hush-hush way the U.S. Army is looking into the possibilities of small and irregular kinds of war; security regulations prohibit the author from discussing some of the interesting new developments in this field.

National Research and Development Programs.

The United States Government considered as a whole has developed a very adequate scientific research program. Most of this is quite properly keyed to the physical and mechanical sciences, in which the most tangible results are obtained. Substantial strides are being made in the medical and allied fields. Some research is, however, being carried out in fields pertaining to psychological warfare. These are worth describing, but it must be remembered that research on PsyWar may not affect PsyWar itself as much as research in other fields which, by changing the character of war, will change PsyWar too.

Within the general research field, two basic approaches have been recognized by the U.S. Army as being distinct from one another: developmental research and operations research. *Developmental research* consists of that research which creates new weapons, new methods of war, new devices or procedures, doing so by digging through modern science, investigating its applicability to military problems, and then advancing the frontier of science, when necessary, in the military interest. The goals of *operations research* are more modest and, in some respect, more provocative. Operations research takes operations as they exist and reexamines them from beginning to end to discover how much of each operation is scientifically pertinent to its stated goal, what economies, modifications, or changes might be introduced, and how the operation might be improved.

Developmental Research in PsyWar.

At the time of the close of the 1950-53 phase of Korean hostilities, the PsyWar being conducted by the United States Army in Korea showed little sign of having been influenced by developmental research into this field of activity. The leaflets were not better than the leaflets of World War II, nor even very different. Because of the peculiar political limitations of the war, the radio program was not as good as the performance of ABSIE under Eisenhower. The tactical use of loudspeakers had shown a very marked improvement over World War II standards, but to a non-engineer such as the present writer neither the Communist loudspeakers nor our own seemed strikingly better or different.

Developmental research had a great deal to offer, but the gap between initial scientific advance and practical military application appeared to be too broad to warrant the assumption that the research had transformed the U.S. PsyWar program.

Operations Research in Korea.

Operations research—sometimes slangily called *opsearch*—was applied to the Korean war with highly uneven results.⁵⁸

Among other things, Army officers in the PsyWar field showed, early in the Korean war, that land forces possessed tactical opportunities which combat propaganda could exploit very effectually. Various experiments were tried, none of them so decisive as to affect the outcome of the war, but some of them of real tactical value and others of great importance in obtaining Chinese prisoners.

One of the points examined was surrender as a *process*. Surrendering does not depend upon the disposition of the individual enemy soldier to say *yes* or *no* to the war as a

whole. He could say *no* a thousand times and still be on the other side shooting at us.

The actual physical *process* of surrender is an elaborate one consisting of the psychological processes of getting ready to give up on the other side, the physical capacity to surrender when the opportunity for getting captured presents itself, and the alternative, more difficult process of deliberately leaving the other side and getting to our side alive. In 1951 and 1952 there were considerable developments along this line. Americans learned much about how to teach enemy soldiers to surrender. Late in 1952 and early in 1953 the front had become so static that it took extraordinary heroism for soldiers—outside of a tiny minority engaged in reconnaissance patrols—to get away from their own side and surrender to the enemy without being killed by their friends as deserters or by the enemy as sneak attackers.

The U.S. public did not realize that throughout the Korean war the Communists—Russian, North Korean, and Chinese—enjoyed a distinct radio advantage over the UN side both as to funds available for programs and as to number of station-hours on the air. The language gap between the Americans and Chinese was so extreme that it was hard for Americans to realize that the Chinese broadcasts covered wider audiences and covered them better than did our own. American restraint in this field may have been dictated in part by the fact that the war was a limited war consisting of combat only with those armed Chinese Communists on North Korean territory, but not with armed Chinese Communists elsewhere in the Far East.

Philosophy and Propaganda Development.

In terms of specific literature of PsyWar it is difficult to find many contributions of professional philosophers to PsyWar since the end of World War II. This is curious, in view of the Communist propagation of philosophy, no matter how perverted its form, as a major weapon. The American philosopher, Dr. George Morgan, who became a career diplomat, was simultaneously a Soviet-area expert and a key figure in the Psychological Strategy Board. There were not many others like him.

Philosophy offers an opportunity for the reexamination of cultural values. The indoctrination of those professors who will teach the teachers of the generation after next will influence the capacity of future Americans to have a world-view which will give them the utmost opportunities for action in the military field while retaining as far as possible the blessings of U.S. civilian civilization. That U.S. civilization is still civilian and not military is, of course, beyond cavil.

The William Jackson committee was a voice crying in the wilderness when it asked for new terms and new ideas against which to set U.S. propaganda operations in the world of modern strategy. Philosophers may have had the capacity for finding some of the answers, but philosophers, of all people, do not like to be jostled or hurried. The author has never heard of a philosopher employed on a confidential basis by the United States Government to think through the historical and cultural rationale of a U.S. military victory for the future. Writers such as F. S. C. Northrop and Erich Fromm—to name only two sharply contrasting personalities—have written books which possess high significance for the international propaganda field. The connection appears, however, to be tangential.

Literary Contributions.

Almost all the best propagandists of almost all modern powers have been, to a greater or less degree, literary personalities. The artistic and cultural aspect of writing is readily converted to propaganda usage. Elmer Davis is a novelist as well as a commentator. Robert Sherwood is one of America's most distinguished playwrights. Benito Mussolini wrote a bad novel. Mao Tse-tung is a poet and philosopher, as well as a Communist party boss. Down among the workers in the field, such American novelists as James Gould Cozzens, Pat Frank, Jerome Weidman, and Murray Dyer, have worked on U.S. psychological warfare.⁵⁹

Though literary men have converted their writing to propaganda purposes, few of them have gone on to define the characteristics of a specific conversionary literature or to compile canons of literary style applicable to the propaganda field. The contributions may lie in the future.

The Social Sciences.

The American Association of Public Opinion Research (AAOPR) is the professional league of U.S. propagandists and analysts of public opinion; its quarterly, *Public Opinion*, is the key journal in the field. The members of this association are drawn both from the social sciences and from the psychological sciences, ranging from such practical operatives as Dr. George Gallup and Elmo Roper to austere theorists like Professors Nathan Leites and Hadley Cantril.

A good argument can be presented to the effect that the skills brought from the social-science into the propaganda field are more valuable once they are employed full time in that field than an attempt to apply political science, or sociology, or economics, each as an individual compartment, to the field of propaganda. There is still no book available with the title *The Politics of Knowledge*,⁶⁰

even though the reception, control, prohibition, and dissemination of knowledge is a major factor in all modern governmental processes both in and out of the propaganda field.

Psychology and Related Sciences.

There has been an immense amount of work done by psychologists, much of it classified, on the field of propaganda. Some of this work is refreshing in the extreme and should provide nasty surprises for the Communists in a major war. Other parts are restatements which if translated into operations might or might not prove feasible with the kind of army we Americans have or are likely to have.

One of the most conspicuous developments since World War II has been the application by psychologists, sociologists, and persons in related field of *quantifying techniques*. The introduction of rigorous scientific requirements of *number* into the attempted reportage of propaganda behavior or propaganda results is having a significant effect. Quantification may not obtain everything which its devotees claim for it. There is a wide area of human behavior which is significant to the ordinary person, or even to the expert in descriptive terms, and which loses much of its significance if the descriptive and allusive terms are replaced by measurements, tables, and graphs. There is, however, no danger that quantification will replace description as the sole tool of research in the propaganda field.

What quantification does do is develop a common area of discussion between propagandists and nonpropagandists. In many instances quantification can demonstrate results where allegations of failure or of success would have nothing more than personal authority to support them.

Within our own particular kind of civilization quantification has a special appeal because of the American trust in engineering and in numbers. The conclusions of the Kinsey reports on men and on women seem much more authoritative to the ordinary man because they are presented with an ample garniture of numbers, even though Havelock Ellis's pioneer works in the psychology and behavior patterns of Western sex life may have been much more tangible and much more revolutionary in their time.

Projection and Research.

All propaganda involves a certain degree of projection—the propagandist attempts to identify himself with a situation which he does not face in real life and to issue meaningful communications to persons about situations which they themselves do not face yet. Much of the psychological research on tactical PsyWar remains yet to be done, although from the quantitative point of view there have been significant U.S. achievements within the past four years.

Another aspect of projection is left unexplored because of its immense difficulty and its dangerously unscientific character. Consider the problem this way: the United States one day before the outbreak of war with a hypothetical enemy, such as the Soviet Union, will possess a certain group of characteristics. Representative individual lives within this country can be determined to possess certain habits concerning mass communication, trust in mass communication, and response to symbols which may come through press, radio, or other mass devices.

One day after the outbreak of war the United States will change *because* the war has broken out.

One month after the outbreak of war the United States will no longer be the USA₁ which existed on war-day. It may well have become USA₂₅ because of the rapidity and variety of change. Three Soviet hydrogen bombs and twelve Soviet atomic bombs might change many of our national, economic, political, and psychological characteristics, and no one, not even an American, could predict this change in advance. The best he could do would be to get ready to study the change as it occurred, to understand the rate and direction of the change, and to assess the meaning of the change in light of the conduct of war.

The same would be true of the USSR; that country, like any other major country, would change under the impact of war. Who could have predicted the renaissance of Russian patriotism and traditionalism resulting from the Nazi invasion of 1941? Even if we know where the Russians are as of the outbreak of war, we won't know where they will head or how fast they will head there, once war has broken out.

The scientific problem presented by attempted serious study of a U.S.-Soviet war is therefore very difficult indeed. It is really a problem involving three clusters of moving bodies. The first cluster will be the American people, their behavior, and their institutions; the second cluster, the Russians and allied peoples, their behavior and their institutions; the third cluster, the changing methods of communication existing between them.

It can be said even now, simply by referring to the character of the American people and their past history, that if the Communist leaders of the USSR start a general war, the end of that war is sure (under sets of words and ideas which have yet to be developed in the future) to involve the reconciliation of the inhabitants of the USA with the Russian people. In other words, USA_v and USSR_v can and

must have certain relationships with each other, preeminent among which are attempts at undoing war damage, at political and cultural reconciliation, and the undertaking of the rebuilding of a world which both these great peoples can support with enthusiasm and *hope*.⁶¹

USA_v and USSR_v are imaginable. USA₁ and USSR₁ for the day preceding the outbreak of war, or, alternatively, the day on which the war occurs, will be known elements. American science in many fields can help U.S. mass communications and therewith help our armed forces if we learn how to ascertain how the Soviet leadership changes, how Soviet élite groups change, and how the Soviet population changes during the course of the war. We must not only be able to guess what is happening to them physically, but must try to appreciate and to understand what is happening to them psychologically and semantically. This is an immense task. It is by no means certain that our research and development facilities can give us an adequate research program to handle the problem.

This much can be said: if the Americans understand the Russians before the war and during the war, it will be the first time that a nation has kept its enemy in wide-awake sight.

The usual process in the past has been the acceptance of a few exaggerated stereotypes of the national characteristics of the potential enemy, the ascription of every possible kind of infamy and inhuman characteristic to the enemy during the war, and the redefinition of the enemy as a friend after the war. It would be strange and wonderful if the U.S. Government and the U.S. propagandists (or conceivably as much as a large minority of the U.S. population) could learn how to fight the USSR in order to *help* the Russians escape from a tyranny which has already hurt them much more than it has hurt us.

The Germans suffered a tragic, overwhelming, and perhaps decisive psychological defeat in the Russian Soviet Federated Socialist Republic and in the Ukraine, when they carried with their field forces such naïve and tragic Nazi misconceptions of Russian and Ukrainian character as to defeat every opportunity they may have had for a serious anti-Communist alliance of Germany with the Russian and Ukrainian peoples. They destroyed themselves not through ignorance, but through what they *thought* they knew. If they had been more calm, less assured, more willing to learn from immediate experience, and less indoctrinated with their own preposterous misconceptions of Russian and Ukrainian character, they might have found Russian and Ukrainian allies who would have joined them in the final extermination of the Soviet system.

The world Communist movement has already suffered very serious setbacks because of its failure to project U.S. behavior successfully from the summer of 1950 onward. If the Russian and Chinese Communists had understood Americans well and had made a correct evaluation of the American response to the invasion of South Korea, they would not have driven the United States from lethargy to alertness, from weakness to military strength, from vulnerability toward Communist and crypto-Communist propaganda to sharp and angry recognition of Communist manipulation of symbols such as "progressives," "people's governments," and "liberation."

Communist Developments.

If the U.S. Government agencies know about the scientific development of Soviet propaganda techniques in the last few years, they have certainly not told this author. What is here presented is therefore derived from first-hand

interrogation of Communists, from escapers in both Europe and Asia, and unclassified materials.

Sociologically it would seem that the Russian Communists attempted definite improvements of the techniques of Communist revolution and that these improvements have in large part failed in the European satellites. The governments of Rumania, Bulgaria, Hungary, Czechoslovakia, Poland, and East Germany have turned out to be poor governments—despite the fact that from the Soviet point of view it was a sharp innovation to leave them in pseudo-parliamentary form instead of creating outright Soviet facsimilies.

At the Chinese end of the Moscow-Peking axis the sociology of revolutionary propaganda and organization appears to have worked out much more successfully than at the Russian end. The Chinese Communists, perhaps because they were Chinese, perhaps because they were tougher and more experienced Communists than the Russians, got their country under rigid control and then undertook social and political experiments on a very audacious scale. They have managed not to be un-Chinese while creating in China the kind of pervasive dictatorship which Communist control appears to require.

In the manipulation of satellites and in particularization of propaganda, the North Korean Communist army, the Viet Minh army in Indochina, and the Malayan Races Liberation Army on the Malay peninsula, appear to have near-optimum localism and particularism without suffering serious deviation from the main Communist world-wide pattern. In North Korea, of course, Chinese intervention and Soviet support have sharply modified the position of the North Korean People's Army, but the Annamite and Malay Communist forces appear to be fighting with high morale and considerable success, despite the duality of control

from Peking and Moscow, and despite the difficulties of reconciling Asian nationalism with Marxian-world doctrine.

Another Communist technique is now known through Edward Hunter's provocative pioneer book⁶² by its correct name of "brain-washing." This involves the transformation of a human personality. The author has himself interrogated victims of brain-washing and can attest to the terrifying depth to which this process is carried. The victim of brain-washing is subject to very slight persuasion at the rational level. He is not even given much propaganda as U.S. propagandists of recent years might recognize the product. Instead, the process of brain-washing consists of a frontal attack on all levels of the personality, from the most conscious to the most hidden. The Communists seek through fatigue and sustained interrogation to create a condition similar to what is called "nervous breakdown" in popular parlance. Then they rebuild the personality, healing their victim into Communist normality.

One victim to whom the author talked had been so subject to Communist brain-changing that he thought himself a real Communist even though he had been reared a Catholic. He was completely convinced of the Communist cause and of his own life and place in that cause after the brain-washing had been completed. Unfortunately for Communism, the man got into serious sexual difficulties, difficulties of a kind which any American psychiatrist would recognize as potentially devastating.

As a result of his sexual frustrations he suffered a mild equivalent of the medically recognized phenomenon of the schizophrenic break—that terrible moment of false enlightenment in which the psychotic personality cuts loose with a truth of his own and shuts off most or all communication with normal people—with the consequence that he was walking along Nanking Road in Shanghai, a

normal Communist in one instant of time and (as he put it to the author) in a millionth of a second he suddenly realized he was a Catholic, an anti-Communist, the enemy of every man, woman and child in sight—and at war with his entire environment. As this writer understood it, the poor man, though adjusted to the Communist environment after brain-washing, happened to go crazy—crazy enough to come back to our side.

Who can say which is sane, which insane? When two social and cultural systems are completely at odds with one another it may be impossible to be "normal" in both of them.

Scientifically the Chinese process of personality transformation lacked some of the pharmaceutical features apparent in the Western Communist conversions for purposes of confession. It appears to be a combination of audacious practical experimentation with well-known procedures from textbooks of Pavlovian psychology. It is, of course, an interesting scientific question to ask one's self: could Communist psychological researchers do enough psychological research to understand their own difficulties and to de-Communist themselves in the very act of seeking better psychological weapons for Communism? If the people in charge of Communist psychological techniques were scientists, as American psychologists generally are, there might be a real point of discussion. Unfortunately, most of them appear to be artists, believers, and fanatics. The history of the fanatical religions which have inflamed and ripped so much of mankind across the centuries is not such as to suggest that Communism will de-Communist itself by becoming more Communistic or more scientific.

Logically considered, the United States remains the largest extant revolutionary experiment in the world—the first immense human community which survives without

profound dogma or profound hatred and which attempts to make short-range, practical, and warm-hearted (though ideologically superficial) concurrence the foundation for a political and industrial civilization. If the United States wins a few more wars it may be that the rest of mankind will be persuaded that our kind of practicality is not only humanly preferable, but scientifically more defensible than the philosophies of competing civilizations. It seems unlikely that Communist research can outstrip us in the propaganda field so far as the race is run in purely scientific terms; artistically and gadget-wise the Communists are just as inventive as we are and often more enthusiastic.

Private PsyWar and Covert Techniques.

Another aspect in the development of PsyWar was the inevitable possibility that skills learned in wartime would not be forgotten in time of peace. Many of the background studies made for OWI during World War II have been developed, on the constructive side, into serious scientific contributions to ethnology, anthropology, or psychology. The postwar studies of RAND Corporation have in part been released in unclassified form and add to our knowledge not only of propaganda but of mankind. The RADIR project at Stanford University, the Russian research program at MIT and Harvard, and other governmentally inspired or encouraged undertakings have borne similar fruit for private scholarship and discussion.

On the other side of the coin, it is very hopeful to note that the many and dangerous techniques developed by OSS for covert propaganda, some of which were applied with considerable success in Europe, have not been introduced into domestic U.S. politics, commercial competition, or other forms of private life. After each war there is often a danger that the coarsening of a culture by the war will lead to the

application of wartime skills to peacetime situations. This was emphatically not the case in the Presidential campaigns of 1948 and 1952, even though persons of rich PsyWar experience in World War II were on the staffs of both Stevenson and Eisenhower.

It is often forgotten that some of the deadliest and most effective revolutionary enterprises in the nineteenth century were undertaken without the consent or assistance of the existing governments. Karl Marx was certainly not an invention of Lord Palmerston. Bakunin did not operate out of the French Foreign Office.

In the postwar discussion of USA-Communist rivalry, recommendations were often made on the U.S. side that we should counter Soviet covert operations with our own covert operations against the USSR. What has been forgotten in this context is the fact that such operations have been made illegal and dangerous under United States law. Under Federal law as it exists today no Underground Railway could be developed to assist Soviet escapers in the way that Negro slaves were relayed across the Free States to Canada in the years before Emancipation. One of the chief blocks to U.S. covert operations is the immense growth in all directions of the power, authority, and responsibility of the Federal Government; this growth makes it almost impossible to wage revolutionary or conspiratorial operations from U.S. territory without the prior approval of U.S. authorities—which the authorities, under traditional international law, cannot give and cannot afford to give.

It would seem desirable, if the Cold War situation persists over a long period of time, for Americans to reexamine the restraints which they have placed upon their own citizens and to attempt a revision of the laws which would permit pro-American secret activities to be launched without

permitting anti-American activities of the same kind to be carried on. One immediately comes to the conundrum:⁶³

How can the Government say *yes* to the one and *no* to the other without being cognizant of what happens?

The answer would appear to lie in the older body of our law in that a withdrawal of governmental authority from some fields would leave the individual responsible and subject to indictment and trial if his enterprises should prove deleterious to the United States Government, but not subject to punishment if his enterprises hurt the known antagonists of the USA.

Phrased in another way, this means that the USA might, in a long-range Cold War situation, be required to make some domestic recognition of the fact that the Communist states are the antagonists but not the military enemies of the U.S. system of government and that as antagonists of this system of government such states, their representatives, their property, and their organizations, should not be afforded any more protection under our laws than is given to the National City Bank of New York in the laws applicable to the city of Moscow, or the American Telephone & Telegraph Company in the laws which apply in Budapest. For a long time the Communist states have treated even the most innocent business enterprise and social club on our side as though they were attainted with an inherent factor of criminal and subversive intent. The withdrawal of U.S. legal protection from all things Communist might allow the American people—or those among them who so chose—to develop proclivities for adventure and trouble-making against the Communists. These proclivities are now sternly repressed by Federal statute.

The Future of Psychological Warfare.

PsyWar has become an existing art. Where it had no practitioners at all in the United States between 1919 and 1940, it has had a long and distinguished roster of active and reserve officers, civilian consultants, and demobilized veterans interested in the field ever since 1945. A wide variety of military establishments have had PsyWar responsibilities assigned them. Substantial cadres of officers and skilled enlisted personnel have been recruited and trained. Radio and leaflet facilities are ready to accompany our land, sea, and air forces wherever they may have to go. A U.S. strategic center for global propaganda, instantly convertible to wartime use, exists in the Operations Coordinating Board under the National Security Council.

This is not the end of the story.

One of the paradoxical but deeply true factors in the study and conduct of propaganda is this: the more people know about propaganda, the better they can resist it.

Propaganda was a tremendous bogey in the 1920s. It probably seems very ugly and frightening to most people born before 1920. It does not seem too frightening, so far as the author can judge, to Americans born after 1930. Those born in the period 1920-30 appear to be divided in their emotional reactions to mass persuasion situations.

PsyWar is not magic. It is a valuable auxiliary to modern warfare and a useful concomitant to modern strategy. If a particular strategic policy is sanely and effectively devised as a feasible deterrent to war, the PsyWar procedures supporting that strategy will contribute to the prevention of war. Psychological warfare represents a recognition and acceptance in the military and strategic field of skills which grow about us every day.

In so far as ultra-destructive weapons may have increased the tenseness and bad temper of people who must live under the perpetual but remote threat of atomic bombing, one can say that physicists have upset the nerves of mankind and that it is now up to the propagandists to reassure and to reconcile the peoples.

Whatever PsyWar does, it certainly does not and should not increase the bitterness of war. Fighting itself is the supreme bitterness. Radio broadcasts and leaflets even in wartime only rarely should promote hatred. The situation which the world faces is dangerous because of technological development, not because of psychological knowledge. PsyWar ranks as a weapon, but it is almost certainly the most humane of all weapons.

Apart from PsyWar, what military weapon destroys the enemy soldier's capacity to fight by saving his life? PsyWar tries to bring him over alive and tries to send him home as our friend. No rival weapon can do this.

PsyWar, no matter what it may be called in the future, cannot be omitted from the arsenal of modern war. Neither can it outlast war. Its improvement is a cheap, valuable, and humane way of increasing the military potential of any country whether we think that country to be politically right or politically wrong.

Since 1945 we Americans have written more, studied more, and talked more about PsyWar than have any of the other free peoples. This is a hopeful sign. It can be read as an indication that the American love of the gadget, the American quest for a novelty, can be turned to the arena of the soul. The Communists are better liars, better schemers, better murderers than we shall ever be; they start off by being better fanatics. Is it not in the American spirit that we should out-trick them, out-talk them, and out-maneuver them? We have a very creative and resourceful civilization

at our backs. We have no Führer to guide us and no party line to comfort us; we don't even want such things. Hard though it may be, we can live with our own consciences and not seek for keepers.

The Communists have started a fight with us. That fight may go on a long time. If they want to stop fighting we shall certainly try to find peace with them. But if they push the fight to its bitter end—

We shall not fail.

APPENDIX

Military PsyWar Operations, 1950-53

On 25 June 1950, when the invasion of the Republic of Korea began, no real military PsyWar organization was tangibly evident. A planning staff headed by Colonel J. Woodall Greene had been re-created in the Far East Command's GHQ in 1947, but it was hardly prepared to direct full-scale propaganda operations on such short notice, especially with a total lack of field operating units. Yet the staff with hasty augmentation did go into action—in effect, became its own operating unit—two days following the invasion, using both leaflets and radio in a strategic campaign that was continued without interruption for over three years.

At the same time that General MacArthur made provision for the PsyWar planning staff in the Far East Command, the Department of the Army's G2 in 1947 directed the inauguration of a long-range program of extension courses to be administered primarily to the specialists of the Military Intelligence Reserve. One such specialty in the military intelligence career program was psychological warfare.⁶⁴

Parallel with the development of training literature based on World War II experience, the Army experimented with the use of PsyWar in field maneuvers. A special unit, called the Tactical Information Detachment,⁶⁵ was formed at Fort Riley, Kansas.

Organization of Field Operational Units.

Less than a month after the 1950 invasion, the Department of the Army announced the approval of a new organizational concept for PsyWar field operational units. The new concept, profiting by the organizational happenstance in all theaters of operations during World War II, established two functional units: one for *strategic* propaganda support, the other for *tactical* propaganda support.

Radio Broadcasting and Leaflet Group.

Although the concept for new unit organization and function was not conceived overnight, FEC's Psychological Warfare Section (PWS) with its dual planning and operating responsibilities pointed up the urgent need for a unit properly manned and equipped to support full-scale strategic operations in any area. So the Radio Broadcasting and Leaflet (RB&L) Group was born. Not only was it designed to conduct strategic propaganda in direct support of military operations, but it likewise was created to support the national world-wide propaganda effort when so directed. It was built on a basic framework of three companies:

Headquarters and Headquarters Company, containing the command, administrative, supervisory and creative personnel necessary for propaganda operations.

Reproduction Company, containing intricate equipment and skilled personnel capable of producing leaflets and newspapers of varying sizes and multiple color.

Mobile Radio Broadcasting Company, designed to replace or augment other means of broadcasting radio propaganda.

In 1953 a fourth type company was activated at Fort Bragg, North Carolina—the *Consolidation Company*. This unit was very flexible and had the job of creating and conducting PsyWar in support of consolidation operations in areas under Military Government control.

Figure 75: UN Propaganda. In some leaflets used in Korea, the United Nations emerged as a major point. Here UN lavishness to South Korea is contrasted with Communist rapacity in the North. The scene does not remind the reader of slums on our side.

Loudspeaker and Leaflet Company.

The Group's junior partner in the conduct of PsyWar support operations was the Loudspeaker and Leaflet (L&L) Company. This unit specifically supported an army in the field with adequate *tactical* propaganda support. Like the Group, it supported the national propaganda objectives, but it interpreted the directives that came from the theater commander in terms of more immediate objectives. Its targets were smaller, lived under unusual circumstances, and presented highly vulnerable, rapidly changing propaganda opportunities—a real challenge for the L&L Company. Organizationally it was a trimmed-down version of the Group. Its *company headquarters* and *propaganda platoon* were the offspring of Headquarters and Headquarters Company. The *publications platoon* was a smaller, more adaptable version of Reproduction Company. And the *loudspeaker platoon* was the tactical counterpart of the strategic Mobile Radio Broadcasting Company.

Figure 76: Korean Leaflet Bomb, Early Model. An M16A1 cluster adapter being loaded at the FEC printing plant in Yokohama (1 November 1950). The bomb type adapter will contain 22,500 (5" by 8") psychological warfare leaflets.

The Tactical Information Detachment, moving from Fort Riley to Korea in the fall of 1950, was reorganized as the *1st Loudspeaker and Leaflet Company* and, attached to EUSAK, served as Eighth Army's tactical propaganda unit throughout the campaign. It adjusted its location, equipment and propaganda tone to keep pace with the ups and downs of the Korean war.

Psychological Warfare Center.

Paralleling the creation of the Office of the Chief of Psychological Warfare in the Department of the Army PsyWar training was started in the spring of 1951. A faculty was collected at the Army General School to start the world's first formal school of military propaganda.

At the same time, reserve officers whose civilian specialties were in or related to mass communications were recalled to PsyWar assignments. Several RB&L groups and L&L companies were activated and trained at Fort Riley. One of these, the *1st Radio Broadcasting and Leaflet Group*, was deployed to Japan to become the strategic propaganda

support unit in FEC, thereby relieving the hard-pressed Psychological Warfare Section of its operational functions. The Group left Fort Riley in July 1951 at the height of the Missouri Valley floods, forcing the unit to take emergency detours by bus and train in order to meet its scheduled port of embarkation call. The 1st was the only group to have been used in active operations. Other groups were employed in training missions. In addition, Reserve groups and companies trained periodically at key locations where sufficient specialized personnel were available to keep the units on a ready, stand-by basis.

In April 1952, the PsyWar training activities at Fort Riley were moved to Fort Bragg, North Carolina, where the new Psychological Warfare Center was located. This Center not only provided unit training supervision and facilities, but it fathered a new activity, the Psychological Warfare Board, designed to evaluate and test new PsyWar equipment and techniques. And the Psychological Warfare School, an outgrowth of the classes conducted by the Army General School, was formally recognized and established as one of the Army's specialist schools. More than four hundred officers have received diplomas as PsyWar officers at the time of this writing (1953). Most of the graduates have been Army officers, although successfully completing the course have been students from the Navy, Marine Corps, Air Force, U.S. Information Agency, and from nine Allied nations.

Psychological Warfare Staff, FEC.

For nearly two years, the Psychological Warfare Section operated under the general staff supervision of Intelligence (G2). Since World War I days G2 had been given the responsibility for monitoring PsyWar activity, a practice that was evident throughout World War II. In 1947 the Department of the Army transferred the monitorship and

supervision of PsyWar to Plans and Operations (G3). The shift was effected in FEC in 1952.

Figure 77: UN Themes. This Korean-language leaflet states: "No soldier would attempt to fight 54 men, yet Communist China is attempting to fight 54 nations. Don't fight for Communist enslavement—Join your comrades who have surrendered into safety."

Early in 1953 PWS was transferred to the staff of the commander, Army Forces Far East (AFFE), a paper transaction to put the staff in a closer position to coordinate the plans and operations of the supporting army PsyWar units.

Throughout the Korean conflict, PWS, like its area commander, wore two hats: PWS was also the PsyWar operations coordinating agency for the United Nations Command.

Broad objectives made possible throughout the war years the development of literally thousands of appropriate themes. One theme so prominent in World War II propaganda, that of *unconditional surrender*, was never used. UN policy denied its use, and PWS enforced the prohibition.

Psychological Warfare Staff, EUSAK.

Recognizing the need for PsyWar officers on army and corps staffs, the Department of the Army hastened to make an allocation for these officers to be integrated into headquarters structures. The PsyWar officers finally came to rest in the G3 staff section.

Eighth Army's PsyWar division of G3 had the 1st Loudspeaker and Leaflet Company under its operational control. EUSAK's PsyWar officer kept a tight control over the propaganda output of the L&L Company by physically moving the propaganda platoon into his EUSAK staff office.

Figure 78: Home-front Morale. When South Korean communications were interrupted, leaflets such as this provided an early boost to Korean civilian morale.

Each of the corps PsyWar officers had under his operational control one loudspeaker section (with a varying number of teams) from the L&L Company.

Radio Operations.

Radio in the Korean conflict was used jointly as a strategic and a consolidation medium. From the beginning of the war, radio was the voice of our military policy. An ambitious network, supervised in 1950-51 directly by PWS and thereafter by the 1st RB&L Group, became known and

recognized as the Voice of the United Nations Command. The Korean Broadcasting System (KBS) and the Japan Broadcasting System (JBS) transmitted on a cooperative basis, with the U.S. Government buying air time. The 1st RB&L Group's radio unit furnished programming assistance through key stations in Seoul (KBS), Taegu (KBS), Pusan (KBS) and Tokyo (JBS). In addition, the Group furnished technical assistance to KBS in order to keep as many as twelve network stations on the air.

Leaflet Operations.

As in World War II, leaflets were delivered primarily by two means: aircraft and artillery. B-29s of the Far East Air Force ferried leaflet bombs on night missions deep into strategic areas. Light bombers and liaison craft in support of EUSAK dropped both leaflet bombs and bundles on tactical targets. The leaflet bundle was a Korean war development. It was wrapped, tied, and fuzed in such a manner that it would open and release its leaflets in mid-air. The 105mm. howitzer remained the principal artillery piece for placing propaganda-loaded shells on pinpoint targets.

Tremendous quantities of leaflets were printed. The 1st RB&L Group on many occasions averaged better than twenty million pieces of printed propaganda every week. To this, the 1st L&L Company in Korea added an average of three and a half million leaflets per week.

Loudspeaker Operations.

The airborne loudspeaker was the object of experimentation, but the bulk of loudspeaker broadcasts were made from vehicle mounts, such as tanks, and from emplacements. During the static battle situation of 1951-53, most of the broadcasts were of the latter kind. Range of the

voice casts was short, something like two thousand yards under ideal conditions. Personnel and equipment were supplied by the 1st L&L Company, and scripts were prepared by PsyWar Division, G3, EUSAK.

Results of Military PsyWar Operations.

When the question was asked, "Just how effective was PsyWar?" the answer was vague. Clear-cut immediate evaluation of the effects of each propaganda campaign was often impossible to ascertain because of the many intangible conditions that were prevalent in the target area—conditions that were constantly changing.

Some critics of the PsyWar operations in the Far East Command charged that there were exaggerated claims of prisoners of war who surrendered as a result of propaganda. They pointed out that a head count of prisoners is an inaccurate measure of *direct* effects of PsyWar used in support of military operations, because rarely is the taking of prisoners the *sole* goal of any major PsyWar campaign.

Other critics expressed the belief that emphasis had been placed on *quantity* rather than *quality* of propaganda. By quantity they meant propaganda measured by bookkeeping statistics. By quality they meant propaganda that, planned with potent intelligence, was capable of exploiting propaganda opportunities with maximum psychological impact.

Did PsyWar achieve its goal?

The effects of planned persuasion in a thousand days of radio broadcasts, in tens of thousands of loudspeaker appeals, in billions of leaflets, may be measured only in retrospect. The question may be answered when reaction in the target area has reached (or fails to reach) favorable proportion, provided that the tangible results of the military

operations can be clearly separated from those of concurrent and subsequent strategic international information operations.

Figure 79: The Famous Airplane Surrender Leaflet. This is the controversial Far East Command leaflet that in April 1953 offered "the sum of 50,000 U.S. dollars to any pilot who delivers a modern, operational, combat-type jet aircraft in flyable condition to South Korea. The first pilot who delivers such a jet aircraft to the free world will receive an additional 50,000 U.S. dollars bonus for his bravery." The leaflet was printed in three languages—Russian, Chinese and Korean. In this example of the Russian language leaflet, there are added notations in both Korean and Chinese that "this is a message from the Americans to any jet pilot who can read Russian. If you know such a person, please give it to him. It tells him how to escape to the UN Forces."

FOOTNOTES:

1 Histories of warfare, of politics (though there are no good recent ones, Edward Jenks' little book being half a century out of date), of political theory (especially the excellent though dissimilar volumes by G. H. Sabine and by G. E. C. Catlin), of particular countries, of diplomacy, of religion, and even of literature all cast a certain amount of light on the subject. No writer known to the author specializes in the topic of historical propaganda; none takes up the long-established historical role of non-violent persuasion in warfare. Some of the sociologists and anthropologists, such as Karl Mannheim, Max Weber, Talcott Parsons, Geoffrey Gorer, Ruth Benedict (to mention a few at random) have presented approaches which would justify re-evaluations of history in a way useful to propaganda students; but they have not yet persuaded the historians to do the work.

2 7 Judges 22-23.

4 The author's attention to this reference was drawn by an unpublished undated typescript article in the War Department files by Lt. Col. Samuel T. Mackall, Inf.

5 Lo Kuan-chung, *San Kuo chih Yen-i*, translated by C. H. Brewitt-Taylor as *San Kuo or Romance of the Three Kingdoms*, Shanghai, 1929, vol. 1, p. 46.

6 Recent writers on Genghis, such as Lamb, Vladimirtsov, Fox and Lattimore all credit the Mongols with a higher technological level of warfare than has been the custom among most Western historians. H. G. Wells' simple but compelling description of the Mongols in his *Outline of History* is worth re-reading in this connection.

7 Petis de la Croix, *The History of Genghizcan the Great, First Emperor of the Antient Moguls and Tartars ...*, London, 1722, p. 154.

8 Benedict Figken, *Historia Fanaticorum*, Danzig, 1664.

9 Philip Davidson's *Propaganda and the American Revolution*, Chapel Hill, 1941, is a careful scholarly study of this period. Comparable studies have not yet been written concerning other American wars. Military and civilian historians have a fascinating

piece of research awaiting them in the material concerning Confederate and Federal psychological warfare. Each participant in the Civil War was vulnerable to the propaganda of the other. Subversive and clandestine pro-Confederate propaganda in the North is outlined in George Fort Milton's engrossing *Abraham Lincoln and the Fifth Column*, New York and Washington, D. C., 1942, but no comparable study covering all forms of propaganda on either side is yet available.

10 Various new editions of Paine's chief works are available in popular and inexpensive form. They are worth study as good propaganda.

11 In his *The Political Doctrines of Sun Yat-sen*, Baltimore, 1937, page 17 and following, this author attempted to present some of the relationships of ideology to other methods of social control and, in connection with that enterprise, was furnished by the philosopher, A.O. Lovejoy, with a definition of "ideology" more systematic and more elaborate than the one used here.

12 For example, in the 1920's the Soviet press expressed resentment and amusement over a ruse adopted by the British during the course of operations along the Northwest Frontier. Plane-mounted loudspeakers had told the tribesmen, in Pushtu, that God was mad at them for having broken the pledged peace, with the result that they scattered and gave up. This maneuver exasperated the Russians, who themselves were making equally sweeping propaganda inroads on the other side of the Pamirs. The Russians were attacking religion, and having heavy going; it struck them as improper warfare to make use of local superstition.

13 *Webster's New International Dictionary*, Second Edition, Springfield, 1944.

14 The late Huey Long is reported to have created a new word in the language of rustic Louisiana, the word "damlyingnewspapers." By instilling in his followers contempt for the "capitalist" press, he got them to the point where they *disbelieved* anything which they saw in print, and *believed* everything which "Ol' Huey, the Kingfish" himself told them. This operation was technically competent, since one of the most effective means of putting propaganda across is to draw alarmed attention to unfriendly propaganda and then just "happening to mention" the "truth" (that is, the promoted side). Long attributed to the newspapers a large number of lies which they did not print, along with the "lies" (which were in historical fact true) that they *did* actually print. Since most of his followers either boycotted the press or read it in a hostile frame of mind, they never found out whether the newspapers said what Huey said they said,

or not. You can try this out on your neighbors or friends by making up some idiotic "quotation" (such as, "The Jewish *Vorwaerts* says that pickled onions are a cause of immorality" or "*Le Temps* of Paris says that Alaska is preparing to secede") and the listener will be so busy scoffing at *what* the paper allegedly said that he will take no time to find out whether the paper *did* say it or not. Such attributions occur in everyday life; the smart propagandist attributes plenty of rich, ripe, silly quotations to his opponent. How many people actually *know* what the Communists have said on any given topic? Or bother to check on the actual claims of the Zionist organization? Or the statements of the Arabs in Palestine?

15 The literature in this field is carefully described in two volumes by a three-man team consisting of Harold D. Lasswell, Ralph D. Casey and Bruce Lannes Smith, the first being *Propaganda and Promotional Activities, An Annotated Bibliography*, Minneapolis, 1935, and the sequel being *Propaganda, Communication and Public Opinion, A Comprehensive Reference Guide*, Princeton, 1946. The booklists provide material in plenty for any academic-minded inquirer. The essays in the two volumes are well worth reading, although the authors have undergone the professorial delight of inventing a private language of their own. Parts of the latter book, especially, read like proceedings out of an unfamiliar lodge meeting; but there is sound sense and acute observation behind the vocabulary. It must, however, be parenthetically noted that during World War II the key propaganda jobs were held by a radio commentator, a dramatist, a newspaperman, a New York banker, and an absolutely astonishing number of men from commercial radio—along, of course, with a sprinkling of Army and Navy officers in Washington, and a heavy majority of non-specialist officers in the field. The propaganda experts were not, in most instances, called in to do the actual chore of propaganda. Among the exceptions were Leonard W. Doob, author of *Propaganda, Its Psychology and Technique*, New York, 1935, who served in the War Department's Psychological Warfare Branch and in the Washington propaganda center at OWI; C. A. H. Thomson, who served as a propaganda staff officer both in Washington and overseas after being a collaborator with the Lasswell group; and Drs. Edwin Guthrie and A. L. Edwards, whose chapter "Psychological Warfare" in [E. G. Boring, editor] *Psychology for the Fighting Man*, Washington, 1943, pp. 430-447, is a lucid epitome of the topic.

16 This means that if you want to get baptised, you've got to get *all* the way under the water or it doesn't count.

17 See Doob's book, mentioned above, especially pages 71 through 89 and 413 through 417.

18 See the bibliographies by Harold Lasswell and others, mentioned above, for a wealth of literature giving more technical and scientific breakdowns than this. The formula STASM represents what was actually used in preparation of up-to-the-minute propaganda spot analysis for the War Department General Staff by Propaganda Branch during World War II. Some further aspects of this formula are presented in my article, "Stasm: Psychological Warfare and Literary Criticism" in *The South Atlantic Quarterly*, Vol. 46, No. 3, July 1947, pp. 344-348.

19 See Harold Lasswell's *Propaganda Technique in the World War*, New York, reissue 1938, Chapter II, "Propaganda Organization," for a description of the attempts to coordinate policy and propaganda in World War I.

20 Chicago, 1946. The discussion of what censorship authorities regarded as propaganda material possessing value for the enemy, of the wartime OC-OWI relationship, and of censorship of short-wave broadcasts are of particular interest to the student of psychological warfare.

21 In a somewhat different context, it is interesting to note that Chinese Protestant churches, made up of Chinese church members, like to hire ministers who mouth their Chinese with a strong American accent. The American missionaries established the American accent as part of the liturgical paraphernalia of Protestantism, and the Chinese preachers trained under them accepted the American mispronouncing of Chinese as a part of the religion. It is odd to see a church full of Chinese using absolutely unbelievable tones while singing hymns or making appropriate individual responses. At that, they are no funnier than the Chinese Buddhists, who memorize long Indian sutras without understanding a single syllable.

22 On World War I, see Harold Lasswell's *Propaganda Technique in the World War*, previously cited; George Creel's *How We Advertised America*, New York and London, 1920, the very title of which is an indication of its chief shortcoming; Lt. Col. W. Nicolai, *Nachrichtendienst, Presse und Volksstimmung im Weltkrieg*, Berlin, 1920, by the German general staff officer chiefly responsible for staff work on propaganda and public opinion, a very thoughtful though prejudiced book; Heber Blankenhorn's enjoyable little classic, *Adventures in Propaganda*, Boston, 1919 (Blankenhorn was the only American officer to see field service in propaganda in both wars, as a Captain in I and a Lieutenant Colonel in II); and George G. Bruntz' scholarly monograph *Allied Propaganda and the Collapse of the German Empire* in 1918, Stanford, 1938. Readers desiring

further references should consult the bibliographies by Lasswell, Casey and Smith, cited above.

23 Colonel Nicolai, book cited in footnote 1, pages 160-161.

24 For a pro-Hitler view of the world, see Wyndham Lewis' *Hitler*, London, 1931, if a copy is to be found. The author would probably prefer for the book to disappear. It is an eloquent, very pro-Nazi book, putting the Hitlerite terminology into the English language and—what is more important—infusing into the clumsy German pattern of thinking-and-feeling a lightness of touch which makes Naziism more palatable. The book converted no one in its time, and is not apt to do harm at this late date; but it will make the English-reading reader understand some of the novelty, the revolutionary freshness, the bold unorthodoxy which made millions of people turn to Hitlerism as an escape from the humdrum heartbreak of Weimar Germany. Much of the book is devoted to the problem of power—street-fighting, mass demonstrations, slogans, symbolisms—which so fascinated the Nazis.

25 See Carl J. Friedrich, *The New Belief in the Common Man*, Brattleboro (Vermont), 1945, chapter III, "Independence of Thought and Propaganda," pp. 81-120, for a cogent discussion of this mentality. The present author, in *Government in Republican China*, New York, 1938, pp. 18-23, describes in epitome the method whereby the ancient Confucian leadership of China, while propaganda-conscious, used ideology as an economical, stable method of control and avoided its maleficent features. In one of the few poorly argued passages of a great work, Arnold J. Toynbee overlooks this peculiar characteristic of Confucianism and merely equates the Confucian dogma with those of other "universal churches" (*A Study of History*, London, 1939, vol. V, especially pages 654-5).

26 People's Commissariat of Justice of the U.S.S.R., *Report of Court Proceedings in the Case of the Anti-Soviet Trotzkyite Centre ... Verbatim Report*, Moscow, 1937, page 111. These trials were themselves propaganda; in this particular instance, propaganda of a rather poor order, since they failed to convince the foreign public and presumably persuaded only those portions of the Russian public who were so gullible that they needed no further persuading. For a brilliant illumination of them in terms of a readable novel, see Arthur Koestler, *Darkness at Noon*, New York, 1941; the same author also has a book of essays on the totalitarian mentality under the rather fancy title, *The Yogi and the Commissar*, New York, 1945. On the same subject, see Louis Fischer's *Men and Politics*, New York, 1942.

27 This document establishing the COI, along with the other major documents pertaining to American psychological warfare, may be found in J. P. Warburg's book cited above, *Unwritten Treaty*.

28 In the course of a routine day of work on overseas propaganda in 1942, the author, who was then in SSG of MIS, found it necessary to get in touch with Military Intelligence proper, Naval Intelligence, the State Department, the office of the Assistant to the President, the Office of Facts and Figures, the British Political Warfare group (which was vainly seeking its American opposite number), the Office of Civilian Defense, the Research and Analysis Branch of the office of the Coordinator of Information, the office of the Librarian of Congress, the Foreign Information Service, and the Department of Agriculture. Each of these either operated propaganda, or had policy or intelligence contributions to make. The Board of Economic Warfare naturally came into the field too. This was during a period of German and Japanese victories, so that even if propaganda had been coordinated, it probably would not have been much more effective than it was. From what could be figured out later, no real harm was done at this time. Nor was much achieved.

29 The bibliographies are cited above, on page 38. The journal comes out, as its title indicates, four times a year; it is published by the School of Public and International Affairs, Princeton University, Princeton, N. J. Every major library has it. The review section provides a good survey of new writing in the field. Journals such as *The American Political Science Review*, *The Annals of the American Academy of Political and Social Science*, *The Infantry Journal*, and *The American Historical Review* often have significant articles or book reviews in this field. *International Affairs* (Royal Institute for International Affairs, London) has excellent reviews of books arranged by geographic subheads. Opinion and propaganda topics are usually lumped together in academic studies; material on the one is apt to lead to the other.

30 San Tzu Ching, translated and annotated by Herbert A. Giles, Shanghai, 1910, pages 2 and 3. The translation quoted is not by Giles.

31 On the transmitting side, nothing could be more ruinous than mere translation, the more literal the worse, of a single basic broadcast for all audiences irrespective of language or culture. For the text of war communiqués or of official documents, this is permissible, but for news or feature broadcasts, few things could be worse. It is not possible to translate subtle psychological appeals embedded in news or commentary; such materials by their nature must follow forms acceptable to the audience, building up

confidence with familiar allusions and creating a sense of "we-ness" between the actual announcer and his listeners. Equivalents can be worked out. The same basic policies can be transposed. The same source of news and intelligence can be exploited. But the actual program cannot be translated verbatim from one language to another; it must be transposed not only from one language but from one culture to another.

32 Free advertisement.

33 Bad news about his side is not necessarily the only kind of bad news for the enemy to know. Gloomy news about our side can harm the enemy listener if his government is running a propaganda campaign to raise production, promote thrift, etc., by claiming things are worse on *their* side. In such a case, good news about us would be good for him. News must be fitted to the propaganda plan and to the propaganda situation.

34 Walter Lippmann's book, *Public Opinion*, was first published in New York in 1922 but it is still clean-cut as a basic statement of the problems of public opinion. The author's own life as a commentator is remarkable in fulfilling the mission which he implicitly set himself when writing about public opinion: the job of lifting issues into emotional and psychological contexts in which the resulting judgment will be based on socially sound factors.

35 The American newspapers between 1942 and 1945 carried intermittent accounts of these personal and political problems, frequently in the columns of commentators rather than in the regular news sections. (The book by Warburg is of course *Unwritten Treaty*, mentioned above.)

36 For popular histories of the OSS, see *Sub Rosa: The O.S.S. and American Espionage* by Stewart Alsop and Thomas Braden (New York, 1946) or Corey Ford and Alastair MacBain, *Cloak and Dagger* (New York 1946). An exciting thriller novel by Darwin Teilhet gives an oblique and guarded description of black propaganda and clandestine polling: *The Fear Makers* (New York, 1945); Teilhet was himself in OSS. For an interesting description of OSS field operations, see Nicol Smith's *Into Siam* (New York, 1946). OSS was picturesque from the very start, and it is likely that other participants in OSS work will from time to time bring out books on their adventures.

37 Bureau of the Budget, *United states Government Manual, 1946, First Edition*, Washington, 1946, says of the Military Intelligence Division, "It has charge of propaganda and psychological warfare" (page 198). The fiat may be a little more precise than circumstances

warrant, but it at least shows where, for the record, psychological warfare belonged.

38 See Charles E. Merriam's study, *Political Power*, Chicago, 1933, and his later works for suggestive approaches to the political setting of propaganda problems. He developed the terms *miranda* and *credenda* for modern political science usage.

39 While this statement is plainly a matter of individual opinion, the author considers that his own experience supports his opinion in this instance. He wrote plans on almost every operating level in the governmental and military hierarchy during World War II, all the way from drafting plans for the Joint (American) and Combined (British-American) Chiefs of Staff down to helping field agents in the China Theater work out practical little propaganda plans for their own missions, or planning the writing, use, and classification of leaflets one by one, in collaboration with OWI operators. He found planning to be fascinating at the top, and worthwhile at the bottom of the pyramid, but he found no significant correlation between the top and the bottom, save in the sense which he makes plain.

40 In the pseudo-technical propaganda slang of the OWI people, this was called "spelling out." The same people "stockpiled" "campaigns" to "needle" the enemy.

41 So far as he knows, the author was the first—about May of 1942—to urge that a surrender pass be made to look like an official document, with banknote-type engraving and with formal style. Unfortunately, it was printed in green, instead of the old-fashioned orange-gold of the U.S. Treasury yellowbacks, and was sent to the jungle areas of the South and Southwest Pacific, where everything was green to start with.

42 These suggestions are based on the comment of Major Martin Herz, who prepared the leaflets at Anzio beachhead and subsequently was leaflet expert at SHAEF.

43 No author, publisher, place or date. Issued by the unit. The reference is to page 55.

44 The Department of the Army is understood to be preparing a Field Manual and Technical Manual for Psychological Warfare which will describe the doctrines and the equipment, respectively, to be used in combat propaganda situations.

45 In the postwar period a great many reflective publications began to appraise what had happened in the PsyWar field. One of the best of these is Daniel Lerner's *Sykewar: Psychological Warfare Against Germany, D-Day to VE-Day* (New York, 1949), which covers the

European operation in detail. This was followed by *Propaganda in War and Crisis*, edited by Daniel Lerner (New York, 1951). A heavier work, covering many of the same problems is *The Language of Politics*, by Harold D. Lasswell, Nathan Leites and associates (New York, 1949). Leonard Doob's work on propaganda, long the leading American text in the field, was issued in a revised, postwar edition (New York, 1948); the postwar book does much to put "psychological warfare" in perspective. A simpler text than Doob's, useful for less advanced students, is Frederick C. Irion's *Public Opinion and Propaganda* (New York, 1950). A manual directly pertaining to psychological warfare is *America's Weapons of Psychological Warfare* edited by Robert E. Summers (New York, 1951); this also contains a bibliography which is helpful to the layman. Three outstanding works summarize the postwar propaganda position of the U.S. Government: Charles A. H. Thomson's *Overseas Information Service of the United States Government* (Washington, 1950) shows the continuity of the problem from war to peace; Wallace Carroll's *Persuade or Perish* (Boston, 1948) argues the necessity of maintaining an opinion offensive; and Edward Barrett's illuminating discussion, *Truth is Our Weapon* (New York, 1953), brings the story down to the Eisenhower Administration.

46 New insights into the nature of the Soviet antagonist were presented by three related monographs originally prepared inside RAND Corporation, the research facility which often works with the U.S. Air Force. Nathan Leites, *The Operational Code of the Politburo* (New York, 1951), digests Soviet fundamentals of international behavior. Margaret Mead's *Soviet Attitudes Toward Authority* (New York, 1951) applies anthropological and psychiatric methods of analysis; this book, to the military or general reader, should be prefaced by reading her distinguished work, *Sex and Temperament in Three Primitive Societies*, which is now available in an inexpensive, paper-bound reprint (Mentor Books, New York, 1952). Philip Selznick makes the point that organization is itself a Communist power-achieving instrument in his *The Organizational Weapon* (New York, 1952), the third of the RAND group. Lt. Col. William R. Kintner, a Regular Army officer, prepared the challenging study of the specific military content of Communist thinking in *The Front is Everywhere* (Norman, Oklahoma, 1950). Among the many good recent books about the Communist challenge, R.N. Carew Hunt, *The Theory and Practice of Communism* (New York, 1951), is outstanding for its dispassionateness while James Burnham's *The Coming Defeat of Communism* (New York, 1951) is a ringing appeal to our side to meet the challenge. Stefan T. Possony, in *A Century of Conflict* (Chicago, 1953), presents the most coldly damning and

most far-ranging critique of Communist operations which this writer has seen. Willmoore Kendall rendered Americans a service with his careful translation, editing and introduction of A. Rossi, *A Communist Party in Action* (New Haven, 1949), while Bob Darke, in a British counterpart, gives a less intellectual and much abbreviated description of the British Communist set-up and operations in *The Communist Technique in Britain* (London, 1952). Communist revelations of "capitalist" conspiracies which tell more about the haunted, anxious, nasty minds of the Communists than about our own operations are, among others, L. Natarajan, *American Shadow Over India* (Bombay, 1952), and Jean Cathala, *They are Betraying Peace* (Moscow, 1951).

47 Paul M. A. Linebarger, "Communism as a Competing Civilization in Southeast Asia," a contribution to *Southeast Asia in the Coming World*, Philip W. Thayer, editor (Baltimore, 1952).

48 For a contrary point of view, see the works by Harry Stack Sullivan, Brock Chisholm, and others.

49 Problematical in all such attempts of working officers to define "victory" is the serious intellectual issue of avoiding means which by themselves defeat the ends which are sought. If the means are "dangerous" or "immoral" by the standards of the society which applies them, their value becomes low indeed. For the covert side of U.S. operations, see the breezy and popular volumes on OSS: Lt. Col. Corey Ford and Major Alastair MacBain, *Cloak and Dagger: The Secret Story of OSS* (New York, 1946); Stewart Alsop and Thomas Braden, *Sub Rosa: The OSS and American Espionage* (New York, 1946); and the most vividly concrete narration of the group, Elizabeth P. MacDonald, *Undercover Girl* (New York, 1947). For an astonishing work which seems to violate security on every page, see Commander Roy Olin Stratton, *SACO—The Rice Paddy Navy* (Pleasantville, N. Y., 1950); this is the description of a Navy group in China which the author shows to be more covert than OSS itself. A dry, German view of Anglo-American espionage in Holland is given in that superb, true-life adventure story, H. J. Giskes, *London Calling North Pole* (London and New York, 1953).

50 See the works of Freda Utey, Herbert Feis, the Linebarger-Djang-Burks political science text (New York, 1954), and others, not to mention the contributions by Mao, Liu Shao-ch'i, and other Communist leaders.

51 The author himself pleads guilty to having criticized the French unduly without accepting a reasonable share of U.S. responsibility for the situation in Indochina (Paul M. A. Linebarger, "Indochina: The Bleeding War," *Combat Forces Journal*, March 1951), and was

deservedly rebuked from some French readers for his denigration of French imperialism. The author cannot endorse as wise, shrewd, or kind the French political decisions in Indochina, but he can say that the Americans who made (or failed to make) basic policy concerning that area have been as irresponsible and foolish as the French. He trusts that, by the time this note reaches print, a more effectual Franco-American understanding will have replaced the previous difficulties.

52 Psychological warfare is, of course, neither very psychological nor is it necessarily warfare. Indeed, within the context of a rigidly purist and scholastic definition, psychological warfare is not psychological, in that most of its operations are very definitely *not* a part of present-day scientific psychology. Neither is it *warfare* because it can be operated before war, during war, after war, or contemporaneously with and apart from war. As pointed out above, war involves the inescapable content of public lawful *violence*. It is hard to ascribe violence to a short-wave broadcast or to a leaflet. In Korea in 1951 the author heard that a Chinese soldier was found dead—mashed by a leaflet bomb which had failed to explode at the proper altitude. If this story is true, that particular soldier was one of the few genuine *war* victims of military or strategic propaganda both so pretentiously called "psychological warfare" by Americans of the mid-twentieth century.

Anthony Leviero, who summarized American PsyWar in *The New York Times* in a series of articles between 9 December and 14 December 1951, is both an experienced general staff officer and a first-class newspaper man. His comment in 1953 on the new Operations Coordinating Board was encouraging or ominous. He stated in his *Times* dispatch of 4 September 1953 that the William Jackson committee had found that "psychological warfare did not exist as such." If this meant that the new OCB was to sweep aside the limitations of top-secret pedantic definitions and move toward a refreshingly concrete manipulation of the world scene, the news was encouraging indeed. If the new Board was, however, to be dedicated to the manufacture of new, complicated and secret definitions of its own, the news was bad. Given the time-lag on the declassification of Government materials, it may be twenty-five years, or 1978, before the precise definitions of 1953 are available to the public. The tendency of the Board to succeed or to fail will be evident by the time this material is in print; given the personalities involved, the prognosis appeared optimistic.

53 This kind of issue has not been neglected in our public discussions or our schools. Two sides of one famous case are given in Owen Lattimore, *Ordeal by Slander* (New York, 1951) and the

bitterly anti-Lattimore book by John T. Flynn, *The Lattimore Story* (New York, 1953). A serious intelligent attempt to answer some of the problems posed by PsyWar and the resulting loyalty issues within a democracy are the works of Nathaniel Weyl, *Treason: The Story of Disloyalty and Betrayal in American History* (Washington, 1950), and *The Battle Against Disloyalty* (New York, 1951). A formidable presentation of what the Communists are doing is offered in Ralph de Toledano, *Spies, Dupes, and Diplomats* (New York and Boston, 1952) and in Major General Charles A. Willoughby, *Shanghai Conspiracy* (New York, 1952). The kind of round-table often intellectually conceived and executed within American schools is well portrayed in the special issue of *Columbia Journal of International Affairs* (New York, spring, 1951), in which the entire issue is given to a synthesis of international problems in the propaganda field under the heading "Propaganda and World Politics." Stefan Possony's magistral *A Century of Conflict* (Chicago, 1953) provides an excellent general framework.

54 Nothing in previous U.S. experience prepared Americans for the invasion of the individual personality which has long been accomplished by the Communists but which was first publicized in adequate fashion after the outbreak of the Korean war in 1950. The pioneer book in this field, and still the best, is Edward Hunter's *Brain-Washing in Red China* (New York, 1951). This author has known Mr. Hunter for twenty-odd years and can vouch for him as a man with a sober respect for fact, though he does have a vivid taste in adjectives; he has seen not only Mr. Hunter but has gone over some of the raw material which Hunter used and can testify to the reality and sympathy with which Hunter portrays this rather gruesome process. On a different scale, Wilbur Schramm has given a description of what happens when *The Reds Take a City* (New Brunswick, 1951), in a book of that name written jointly with John W. Riley.

55 A sharp contrast between the old politics and the new is shown by the unfortunate book prepared in the Department of State and now hastily, even guiltily, allowed to go out of print by the United States Government Printing Office because it showed that some Americans were guilty or naïve enough to try to love and trust the Soviet state within the same system as our own. One does not know whether to laugh or to weep at the spectacle of men lamenting the fact that they were once innocent and hopeful. The book, prepared by the late Harley Notter and others, is Department of State Publication 3580, General Policy Series 15, *Postwar Foreign Policy Preparation* (Washington, 1949). That not all was innocence, even when things so seemed, is amply attested by Freda Uteley's

controversial but brilliant summary, *The China Story* (Chicago, 1951).

56 The function of decision-making has been brilliantly though solemnly explored in Richard C. Snyder, H. W. Bruck and Burton Sapin, *Decision-making as an Approach to the Study of International Politics* (Princeton, N.J., 1954.)

57 For a contrary point of view, see *Tensions That Lead to War*, edited by Hadley Cantril (Princeton, 1950).

58 The author had the opportunity of observing opsearch in the Korean war on three different occasions: September 1950, March 1951, and November and December 1952 and early January 1953. He visited Korea itself twice and also spent a great deal of time, part of it in a public capacity and part of it as a free-lance author, in the periphery of that war—areas such as Hong Kong, Indochina, Thailand, the Philippines, Malaya, Burma, Indonesia, and India.

59 Several novels have touched on PsyWar problems. The most hard-hitting of the lot is Jerome Weidman, *Too Early to Tell* (New York, 1946). Covert PsyWar whispering techniques are thinly disguised and much improved, technically, in Darwin Teilhet, *The Fear Makers* (New York, various dates). The covert side of some of these adventures is portrayed, among others, by W. Stanley Moss, *A War of Shadows* (New York, 1952); Ray Franklin Kauffman, *The Coconut Wireless* (New York, 1948); and Chin Kee Onn, *Silent Army* (New York, 1953). As exciting as fiction are Mark Gayn and John Caldwell, *American Agent* (New York, 1947), describing the work of an enthusiastic amateur, and L. C. Moyzisch, *Operation Cicero* (New York reprint, 1952), portraying a first-class professional. Alexander Foote, *Handbook for Spies* (London, 1949), and J. V. Davidson-Houston, *Armed Pilgrimage* (London 1949), are interesting distillations of personal experience which touch on espionage and PsyWar.

60 The author professes he would like to write a preliminary work on this subject himself some day, if no one else essays the task first.

61 V = Victory day.

62 Edward Hunter, *Brain-Washing in Red China* (New York, 1951).

63 If one good book can be mentioned without prejudice to the many other good books in the same field, attention can be drawn to the excellent undergraduate text which explores the present U.S. position on the press, George I. Bird and Frederic E. Merwin, *The Press and Society* (New York, 1951). At the opposite end of the spectrum, see Oleg Anesimov, *The Ultimate Weapon* (New York,

1953). The first book takes the U.S. as it is and does not envisage profound responses coming as the inevitable accompaniment of frightful change; the second book states the outside problem in shocking terms, but asks of Americans things which neither they nor their press are ever apt to approve.

64 The development of this activity was handed to the Chief of Army Field Forces, in whose G2 section Colonel Donald Hall was the PsyWar officer. The first of these courses with its supporting textbook was not ready for release by the Army General School until 1949, just one year before the Korean conflict began. In 1949 likewise appeared the first officially approved Army field manual on the subject of psychological warfare support of military operations.

65 Teams from this detachment, armed with leaflets and loudspeakers, were sent to and participated in major maneuvers in continental United States, in the Caribbean area, and in Hawaii. These teams were attached to the "enemy" forces, and exposed the maneuver troops to military propaganda in action. The Tactical Information Detachment suddenly suspended its planning of simulated propaganda operations for Exercise Pluto in 1950. As the only PsyWar operational unit in the Army, the Detachment was hustled off to Korea.

Transcriber's Notes:

The following changes have been made:

1. In the context of "the unprofessional guttersnipe Hitler was ruining the wonderful

German Army in amateurish campaigns" stood "raining" instead of "ruining".

2. The list of further works by the same author was moved from the beginning to the end of the book.
3. In the index, the reference for the entry "Indonesia, fighting in," was changed from 257-258 to 257-259, and reference for the entry "Results of PsyWar," from 327 to 307.

Retained error: While the list of charts mentions a "Chart X", no such chart was contained in the book. The entry has been retained, though.

*** END OF THE PROJECT GUTENBERG EBOOK
PSYCHOLOGICAL WARFARE ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg™ License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg™ electronic works

1.A. By reading or using any part of this Project Gutenberg™ electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg™ electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg™ electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg™ electronic works even without complying with the full terms of this agreement. See

paragraph 1.C below. There are a lot of things you can do with Project Gutenberg™ electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg™ electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg™ electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg™ mission of promoting free access to electronic works by freely sharing Project Gutenberg™ works in compliance with the terms of this agreement for keeping the Project Gutenberg™ name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg™ License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg™ work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg™ License must appear prominently whenever any copy of a Project Gutenberg™ work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg™ electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg™ trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg™ electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1

through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg™ License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg™ License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg™.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg™ License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg™ work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg™ website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg™ License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg™ works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg™ electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg™ works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg™ trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary

Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the

production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg™ work, (b) alteration, modification, or additions or deletions to any Project Gutenberg™ work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg™

Project Gutenberg™ is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg™'s goals and ensuring that the Project Gutenberg™ collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg™ and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To

SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate

Section 5. General Information About Project Gutenberg™ electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg™ concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg™ eBooks with only a loose network of volunteer support.

Project Gutenberg™ eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org.

This website includes information about Project Gutenberg™, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

Patriots of the Philippines :-

American and Philippine forces are liberating your country from Japanese oppression. Enemy air, land and sea forces have already suffered heavy reverses in the Leyte area.

As our landings continue, it is essential that our bombers and fleet prepare the way.

We do not want to injure a single Filipino. During the period from the 15th of December to the 8th of January follow these instructions carefully: -

Stay away from the Japanese troops and any place where they are gathered together.

Avoid all buildings, dumps, airstrips, and bridges used by the Japanese.

And most important of all, at the first sign of our landing, move away from the beaches. Move inland as far as possible.

For your own safety comply with this request.

AACHEN VOR DER EINKESSELUNG

Durch das grossangelegte Umgehungsmanöver der Alliierten ist Aachen fast eingeschlossen. Den deutschen Truppen in Aachen steht nur noch ein 2½ km breiter Rückzugsweg offen. Im Rahmen ihres Umgehungsmanövers besetzten die alliierten Truppen Schaufenberg, 1½ km östlich von Alsdorf.

GROSSE RUSSISCHE OFFENSIVE IM NORDEN DER OSTFRONT

Die Rote Armee ist im Baltikum auf breiter Front durchgebrochen. Die russischen Verbände rücken auf 300 km breiter Front in den letzten 4 Tagen 100 km weit vor. Die Armee General Bagramjans steht dadurch nur noch 70 km vor Memel während der Durchbruch General Chornikowskis die gesamte deutsche Armee im Norden der Ostfront abzuschneiden droht.

Neue alliierte Landung in der Scheldte Mündung

Im Rücken der in der Scheldte Mündung stehenden deutschen Truppen, in der Nähe von Terneuzen, führten britische und kanadische Verbände eine erfolgreiche Landung durch. Es gelang diesen Truppen, die von der See aus landeten, zwei kleine Brückenköpfe in der Gegend von Hoofddijk, 8 km westlich von Terneuzen zu errichten.

THE HOME TELEGRAM

N. 1 A Weekly for American Soldiers

BEWARE! THIS LITTLE SHEET COMES FROM JERRY

It contains part, pure poison (?) and mostly things which you are not supposed to know. If your superior back home have their own way. But why should you get the opinion of both sides in this war? It's good American tradition to listen to both sides. Anyhow, interesting subjects come up for discussion in this sheet. Inside dope which you might want to know. To render this service is an unbiased form in the purpose of this little weekly sheet. It is making an effort across the front to maintain and expose the war propaganda which has set one nation against another for the profit of a few parasites.

If you are a good American, and we have no doubt you are, you will be fair and give the other side a chance to present its case. For after all you are expected to give your life or your health for a certain cause which has been presented to you as a worthy one. What is it? Is it worth fighting for? Is it worth giving your life for, making you a widow, your children orphans and leaving your parents or perhaps a girl who is waiting for your return?

Consider these questions in the light of the information contained in this sheet. As our testimony may still be considered prejudiced, we shall, as far as possible, cite American and British sources of information and then give - in an impartial way - our comments if necessary.

We hope you will like the little sheet although it comes to you from that much-abused word: Socialism opposite you.

Years for a better understanding between front line soldiers. The Editor

New German fighter is let propelled twin engine

A new German twin-engine jet propelled plane the Messerschmitt 109, has been in action against American planes.

It is a heavily armoured single-engine fighter with two jet propulsion units instead of screws. It is the second new type recently encountered by American pilots over Germany.

Allied schedules delayed

"The man in the street" in the United States is confused about the political and military situation and he is quite worried about developments on the Western Front. A Spanish correspondent reported from New York. He informed it is quite possible that the Allied schedule might now be delayed by a quarter of a year, added the correspondent.

The Big Push on the Western Front (by a German correspondent)

Stockholm, Jan. 6, 1945

The fact of Germany have been occupied for quite some time with the constant task of poring over and digesting themselves the prospect of their country and with debates about the plan to deport millions of German men and women to the prison camps of Siberia and the Russian Arctic Zone as slave laborers.

It seems the Germans meanwhile paid no attention to such schemes but after having succeeded in offering resistance on or near the German border they worked day and night for their escape which started on December 16th.

The above is the consensus of opinion of the sound press of the world which naturally is not allowed to appear in print in Germany. Newspapers overseas do not see a fit to join the usual Allied propaganda for home consumption about this "new German opposition".

The "Manchester Guardian", however, printed the truth the other day when stating:

"The Germans have succeeded in smashing the starting points of the Americans for their planned Super-Offensive".

The following pertinent facts are furthermore mentioned in this issue, in the Swedish capital:

1. The Allied Commander-in-Chief was taken by surprise.

2. The losses of the 1st American Army were completely smashed.

3. The Germans were able to employ great troops and plenty of reserves. All were very heavily armed with the most modern weapons.

These are simple facts and the reason they are recognized the reason is that for all those who believed not so long ago that they might be on their way home around Christmas time.

At the moment it now the Allied Command will maintain what it terms a strictly defensive position. The people here in Germany report. Whether they believe them or not, nearly everybody has learned the following facts:

Each other cannot think of making another offensive on the western front for at least three months according to statements by high-ranking American officials in Washington called to newspapers in several countries.

Since the 15th of December when the big German offensive began more than 600 guns and 1500 US units or armored vehicles have been either knocked out or captured. Over 27,000 Americans have been taken prisoner and the casualties are well above 70,000 in all.

The Luftwaffe, relieved last long ago, suddenly appeared in the fighting with strong formations of fighters in the latest days. On January 1st strong formations of German bombers and fighters made a number of surprise raids on Allied airfields in Holland and Belgium crisscrossed with aircraft. According to the first reports between 600 and 800 Allied bombers and fighters were destroyed on the ground and 100 more heavily damaged. The airfields and their installations were likewise hit very severely in the course of these large scale air raids. German fighters also downed an additional number of 100 Allied airplanes in fierce air battles.

You may perhaps feel inclined to disbelieve these statements since the news isn't good. But

from the New York Times - wrote, according to a Reuters report from New York of Dec. 22nd.

"The United States got to used to the idea being always excessive that the German counter-offensive with all its desperate attempts produced a severe shock. We have been taught the lesson that we are in a perilous position that has been tried."

Belgian population stays put despite American withdrawal

Speaking on the radio from London December 21st, Robert Ross, a correspondent with the American troops on the new German offensive from gave an interesting description of the circumstances surrounding the withdrawal of the American troops from the Belgian small towns and villages threatened by the German advance.

The description is interesting not only for what it describes but for what it leaves to be inferred. The conclusion, he said, gathered around the soldiers in bewildered surprise. "It was rather an awkward position for us, having to convey a flood of questions put to us by the people".

The correspondent did not say the people were and wrong their hands over the impending departure or wished the departing "liberators" a speedy return. He merely said they were "bewildered" and asked a flood of questions.

The correspondent went on to say he based on American soldiers who were leaving the town saying: "I never thought that would happen to us". The troops and crews had all been surprised with the Stars and Stripes and other American emblems for Christmas. As the news spread that the American troops were leaving, the people began silently and methodically to remove the decorations from the windows and shops. The correspondent's voice was quite bitter as he went on to say: "I wondered how soon the Nazi flag would appear". He also pointed out that unlike

1940, there were no refugees. "The people," he said, "showed a determination to stay put."

The last two remarks tell us what we Germans have already known for some time and would like you all to know.

Evidently the people of Belgium have learned something since 1940. They no longer fear the German occupation, they have lived under it for four and a half years. They prefer it to freedom, they have been enduring for the last six months, in other words, air bombings, terror, street fighting in the big towns, civil warfare and a war and fear everywhere.

Food Shortage in the U.S.A.

Stockholm, December 20th.

According to the report of the New York correspondent of the Stockholm Tidningen the food situation in New York is expected to deteriorate during the coming winter. Already a shortage of poultry has become noticeable which has compelled the government to take drastic measures, such as requisitioning supplies arriving by motor trucks, with the object of ensuring the needs of the Army.

The chief cause of the shortage of poultry is the shortage of black market crooks, of enormous quantities of poultry in the great breeding districts of Delaware, Maryland and Virginia. They gave very high prices and delivered the poultry to the big or class restaurants and to specially privileged households.

Many wives cannot obtain their lawful ration of eggs from the dealers. These latter demand coupons for five pounds in return for the getting out of a single pound of meat. The surplus coupons are then collected and used to do profitable business on the black market.

For quite some time butter has been very scarce, the same with meat. The available supplies of beef are 10% lower than those of 1943 and pork from 15 to 30% lower.

THE Sad Estate OF THE KINGDOM,

Being an account of the first years charge of our Reformation.

It is an old Custom in England among Tradesmen, to Cast up their Books at Christmas: After their example I have thought fit to draw up the last years Account of the Kingdom, by way of Debtor and Creditor, so plainly, that he that runs may read it. They that love England I am sure cannot like it, but for that reason they should help to mend it. When they know the Discale, it will not be hard to find out the Cure. If our miseries do not mend our Hearts, I wish, at least, they may our Understandings.

Kingdom Debtor,

I. **T**O the loss of three, of the ten Commandments, Honour thy Father: Thou shalt not steal: Nor cover any thing that is thy Neighbours: And those of the Gospel, Do as you would be done by: Don't do evil that good may come of it, nor reward evil with evil, but love one another.

II. To the loss of the Doctrine of Passive-Obedience, and Non-resistance, which first recommended the Primitive Christians to the mercy and Protection of Kings and Emperours, and has ever since the Reformation been the Characteristick of the Church of England.

III. To the loss of an English King in the right Line, by the new art of *Adiscation*, who with all his faults, was Affable, Sover, Just and diligent; and Innocent of the main matters suggested against him.

IV. To the loss of Ireland, by that means, worth thirty Millions of pounds sterling, and the Conveniencies of its Neighbourhood, Trade and Ports for our safety and benefit, unvalluable.

V. To five Millions expended this year to beat the French and recover Ireland.

VI. To thirteen Thousand Soldiers dead in Schomberg's Army, without Sword or Gun, in an unusual and lamentable manner.

To three Thousand Men killed, taken and deserted to King James.

To the loss of Dundall, Carrlingford, Jamestown and Slega, with four Counties in Ulster, which is the only Province of Ireland, where the English Forces have any footing.

To eleven Thousand Souls that perished in London-derry besides many English and Scotch Inhabitants that dyed of the same diseases in the North.

VII. To six Thousand Men that died in Flanders, out of the nine Thousand, forced into the Dutch and Spanish service last year against the French for helping King James.

VIII. To seven Thousand Sea-men that died upon the Fleet, of strange distempers.

IX. To five Thousand Sea-men taken by the French, both upon men of War and Marchant men, notwithstanding our Fleet.

X. To twenty Men of War taken and lost: the value, at least two hundred thousand pounds, which is more then has been lost in three Dutch Wars.

Kingdom Creditor,

I. **T**O the pretence of preserving us from Popery and Arbitrary Government, by reforming abuses in Elections of Parliament, settling Corporations, limiting the Prerogative, and Securing our Laws and Liberties against a standing Army, specially of Foreigners and Papists.

II. To the Doctrines of *Might is Right*, and the *Jus Divinum* of the *MOB*.

III. To a Dutch King, such an one as he is, with abundance of new Lords and Officers of both houses of Parliament, that are yet to deserve their honour, and learn their business.

IV. To a standing Army of Foreigners, brought in and upheld without advice of Parliament, that will Certainly do as King William pleases.

V. To Schomberg's success against the Irish and Harbert's against the French, such as it was.

VI. To fifteen Hundred men killed and taken, and a Thousand Shants and Stories to keep up the Spirits of the People, especially of mighty Victories, Slaughters and *REVOLTS*, that time has detected with a Vengeance.

VII. To the Dutch-friendship, especially in Trade, and that of the Spaniard and confederates, though good for little else but to pick our pockets.

VIII. To poisoned Victuals, or any thing else but the hand of God Almighty.

IX. To five Hundred twenty nine French Prisoners taken by us.

X. To one small man of War, and two Privateers taken by us; the first of which was *restaken*, and other two lately destroyed by the *Romans* at Plymouth.

XI. To

[back](#)

XI. To four Hundred Sail of *Marchant-men* taken by the French, & twenty five lost by Storms, of which nine were driven off of our own Coasts to *France*, whose Hulls and Cargo are valued at two Millions five Hundred Thousand pounds; many of the Ships being as big as our large fourth rate Frigats.

XII. To thirty Thousand pounds for pulling down and building up one side of *Hampton-Court*, and altering the Gardings, and rebuilding what fell down.

XIII. To twenty Thousand pounds for my Lord *Nottingham* and his house, and twenty thousand more to re-build it, with that which fell down of the new building; for it seems they have built with *untemper'd Master*.

XIV. To the *Navy, Army* and *Houhold* for the most part three quarters Sallery *unpayd*.

XV. To the loss of a great part of *Scotland*, and the hazard of the Rest.

XVI. To the loss of fifteen Hundred English, *Horse and Foot*, in that Kingdom; besides more Scotch.

XVII. To a whole year lost in *Trade and War*, not to be computed.

XVIII. To two Millions that we are yet in Debt.

XI. To twenty five French prizes taken by us, of *small burden and mean loading*,

XII. To a more modish apartment with convenient *back Staires*, though the old one had served well enough *eight crowned Heads* in better times, besides *Cromwell*, that loved it of all places.

XIII. To a Good Receipt for the *Pissick*.

XIII. To six Hundred Thousand pounds sent to *Holland* for fear of the world, and as much more to fetch over *foreign Ships and Troops*, for the better preserving our Rights and Privileges, English men not being to be trusted in a business that so nearly concerns them.

XV. To the Maintaining of the *Prerogative* of the Crown against Scotch *Republicans*, in that O U R antient Kingdom.

XVI. To the exploits of *Mackay*.

XVII. To our own folly and Gods Judgments.

XVIII. To three shillings in the pound, and a new Parliament with more *foreign Forces* and *home Levies*, and forty Thousand *Baggonets* (instead of Dr *Oates* forty Thousand *black Bills*) now *helspon*, and making; and *saddles, bridles*, and other furniture coming from *Germany*, by the *Jews* means; for all Nations must have a share of us.

The total of loss in Money	l. Money
<i>Ireland</i>	— 30000000
<i>Taxes</i>	— 05000000
<i>Merchants Ships</i>	— 02500000
<i>Men of War</i>	— 00200000
<i>Hampton-Court</i>	— 00030000
<i>Nottingham-house</i>	— 00040000
	— 37770000

The total of men lost	Men
By death, in <i>S hamburgs Army</i>	— 13000
Killed, taken and deserted	— 03000
Perished in <i>Londowery</i>	— 11000
Dead, deserted & killed in <i>Flanders</i>	— 06000
Dead in the Fleet	— 07000
Dead, taken and deserted in <i>Scotland</i>	— 03000
Men taken by the <i>French</i>	— 05000
	— 48000

To ballance this, we may perhaps have taken and destroyed, in all, three Thousand of our Enemies, got twenty five Sale of small Craft, worth twenty Thousand pound at the most, but remain a most sick Army in *Ireland*; the astonishment of all beholders and a mutinous, rattered and diseased Fleet still.

Hear you see the first years account of our deliverance. *Vast Taxes*, mighty *Losses*, great *Mortality*, so that we have been delivered of more *Men, Money and Ships*, then our *Civil and Dutch Wars* formerly cost us, insonuch as they that see not the heavy hand of God upon us, are blind to providence; our sufferings in *Interest*, as well as *Reputation*, having surpassed all remedy as well as example, unless we speedily repent of our impiety to God, our injustice to our King and our malice against one another.

FINIS.

[back](#)

Address to the Soldiers.

GENTLEMEN,

YOU are about to embark for *America*, to compel your Fellow Subjects there to submit to POPERY and SLAVERY.

It is the Glory of the British Soldier, that he is the *Defender*, not the *Destroyer*, of the Civil and Religious Rights of the People. The *English* Soldiery are immortalized in History, for their Attachment to the Religion and Liberties of their Country.

When King JAMES the Second endeavoured to introduce the Roman-catholic Religion and arbitrary Power into *Great Britain*, he had an Army encamped on *Hounslow Heath*, to terrify the People. Seven Bishops were seized upon, and sent to the Tower. But they appealed to the Laws of their Country, and were set at Liberty. When this News reached the Camp, the Shouts of Joy were so great, that they re-echoed in the Royal Palace. This, however, did not quite convince the King, of the Aversion of the Soldiers to be the Instruments of Oppression against their Fellow Subjects. He therefore made another Trial. He ordered the Guards to be drawn up, and the Word was given, that those who did not chuse to support the King's Measures, should ground their Arms. When, behold, to his utter Confusion, and their eternal Honour—the whole Body grounded their Arms.

You, Gentlemen, will soon have an Opportunity of shewing equal Virtue. You will be called upon to imbrue your Hands in the Blood of your Fellow Subjects in *America*, because they will not admit to be Slaves, and are alarmed at the Establishment of Popery and Arbitrary Power in one Half of their Country.

Whether you will draw those Swords which have defended them against their Enemies, to butcher them into a Renunciation of their Rights, which they hold as the Sons of *Englishmen*, is in your Breasts. That you will not stain the Laurels you have gained from *France*, by dipping them in Civil Blood, is every good Man's Hope.

Arts will no doubt be used to persuade you, that it is your Duty to obey Orders; and that you are sent upon the just and righteous Errand of crushing Rebellion. But your own Hearts will tell you, that the People may be so ill treated, as to make Resistance necessary. You know, that Violence and Injury offered from one Man to another, has always some Pretence of Right or Reason to justify it. So it is between the People and their Rulers.

Therefore, whatever hard Names and heavy Accusations may be bestowed upon your Fellow Subjects in *America*, be assured they have not deserved them; but are driven, by the most cruel Treatment, into Despair. In this Despair they are compelled to defend their Liberties, after having tried, in Vain, every peaceable Means of obtaining Redress of their manifold Grievances.

Before God and Man they are right.

Your Honour then, Gentlemen, as Soldiers, and your Humanity as Men, forbid you to be the Instruments of forcing Chains upon your injured and oppressed Fellow Subjects. Remember that your first Obedience is due to God, and that whoever bids you shed innocent Blood, bids you act contrary to his Commandments.

I am, GENTLEMEN,

your sincere Well-wisher,

AN OLD SOLDIER.

FREE-PASS
Freipass

The Bearer of this FREE PASS solemnly affirms his belief that to help Bolshevism to victory in Europe would be fatal to Britain's future. As a Patriot he is prepared to face up to the situation by voluntarily ceasing hostilities against Germany and her European Allies in accordance with a Special Decree passed by the Government of the German Reich, the Bearer of this Free Pass is entitled to receive preferential treatment and special privileges and provisioning from all German military authorities, who have received as a prisoner of war instructions. Above all, he will not be regarded as a prisoner of war or be interned in a prisoner-of-war camp.

To protect the Bearer and his dependents from possible acts of violence on the part of his misguided compatriots, the German authorities will undertake to enter his name in the official prisoner-of-war lists forwarded in the usual way to the International Red Cross at Geneva.

Vorseiger dieses Zettels erklärt feierlich, daß er es für Englands Zukunft verachtend hält, dem Bolschewismus in Europa zum Siege zu verhelfen. Er steht als unerschrockener Patriot daraus die vollen Konsequenzen und stellt hiermit freiwillig den Kampf gegen Deutschland und seine europäischen Verbündeten ein. Vorseiger dieses Zettels erklärt, seine Anordnungen der Reichsregierung werden daher alle militärischen Dienstleistungen zu versagen und ihn insbesondere als Kriegsgefangenen, sondern außerhalb der Kriegsgefangenenlager unterzubringen.

Zum Schutze des Überbringers und seiner Angehörigen vor möglichen Nachstellungen seiner verblendeten Volksgenossen ist es jedoch in den amtlichen Listen als Kriegsgefangener zu führen und eine entsprechende Meldung an das Internationale Rote Kreuz in Gené zu machen.

Parce que

ils ont compris que cette guerre n'est pas un simple conflit entre nations, mais bien le heurt de deux idéologies. D'un côté, un peuple qui vient d'accomplir sa révolution sociale et de l'autre, l'Internationale Judéo-capitaliste qui, non sans angoisse, voit se lever l'aube d'un renouveau qui n'est pas sans danger pour nos intérêts.

Parce que

ils vomissent notre race, la race juive, et qu'ils veulent la mettre, une fois pour toutes, dans l'impossibilité de poursuivre son œuvre de corruption et de désagrégation.

Parce que

ils veulent éliminer définitivement les ploutocrates et autres parasites qui vivent de la sueur du peuple.

Parce que

ce sont des hommes virils, sains et dynamiques qui méprisent les « zazous » qui sont le produit d'une société en pleine décomposition.

Parce que

ils ont vu le bolchevisme chez lui et parce qu'ils ne le veulent pas en France; parce qu'ils connaissent la bestialité et l'effrayable asservissement de ceux qui vivent sous notre despotisme.

Parce que

ils veulent pour leurs travailleurs le respect auquel ils ont droit, en même temps que l'assurance définitive d'une EXISTENCE DIGNÉ.

Parce que

ils veulent une Europe unie qui ne s'épuisera plus tous les 25 ans dans une tuerie atroce pour les besoins de notre coffre-fort.

Parce que

ils veulent pour cette Patrie, à laquelle ils ont voué leur vie, une place de choix dans l'Europe de demain.

Parce que

nous sommes des destructeurs et qu'ils appartiennent à la race des constructeurs.

Parce que

fiers de leurs traditions et d'un passé glorieux, ils veulent balayer tout ce qui causa leur médiocrité et CONSTRUIRE LEUR AVENIR.

Parce que

leur foi est inébranlable et parce qu'ils ne déposeront pas les armes avant le triomphe final.

Parce que

ce sont des soldats héroïques, aussi humains dans la paix qu'ils sont courageux au combat.

VOILA POURQUOI J'ACCUSE LES HOMMES DE LA WAFFEN-SS.

Propaganda...

Propaganda...

10 Commandments for men on leave

(translation of a page of a pamphlet handed to German soldiers going on leave)

1. Just as you are in the fighting line — ready for anything, confident, sure of victory, proud and superior — so should you also appear to your family and anybody else you may meet at home.
2. Should any one ask you: "When will this war at last be over?" answer him: "When we have achieved our victory!"
3. Remember that all wild rumours you may meet at home originate with enemy propaganda, and turn a deaf ear to them!
4. Tell all rumour-mongers and professional grumblers to shut up and remind them that they are acting criminally!
5. Pay no attention to the many difficulties war brings to people at home, and will continue to bring, but contemplate the quiet heroism of mothers, of our men and women arms workers and all those toiling for victory!
6. Should you believe that your people are being treated harshly or even unfairly, don't immediately start cursing. Reserve your judgment, go over things a second time, and then turn to the proper authorities (local Party office, Soldiers' Trustee, the mayor, etc.) or report the case to your unit commander. You will receive assistance!
7. Should somebody at home say: "We've had just about enough of this war!" give him this answer: "If we had talked and acted that way in winter 1911/2 and last winter, the Russians would to-day probably be in Germany!"
8. Encourage your people and acquaintances with simple and sober accounts of the achievements of your unit. You can do this without appearing boastful, yet in such a way as to give your listeners fresh confidence and will to victory!
9. In a friendly but decisive way forbid your people to send you letters full of woe, of petty grievances and senseless complaints and demands!
10. Be conscious, every moment of your leave that you are not going home as a private person, but as representative of the men at the front. The whole armed forces will be judged by reports. See to it that the faith of people at home in their soldiers remains unshakable. In this way you can work for victory even while on leave!

...und Wirklichkeit

7 RATSCHLÄGE FÜR URLAUBER:

1. Verheimliche Deinen Angehörigen nicht, wie es an der Front aussieht. Aber sage ihnen, dass wenn durch das rote Kreuz die Nachricht von Deiner Gefangennahme eintrifft, können sie beruhigt sein; dann bist Du in Sicherheit und kehrt nach Kriegsende baldmöglichst nach Hause zurück.
2. Lebe Deine Angehörigen im Grenzgebiet, rate ihnen, sich nicht evakuieren zu lassen, wenn die Front näherkommt und sie sich irgendwo in Sicherheit bringen können. Sie werden von den Alliierten anständig behandelt werden. Dies ist der beste Weg, die Familie zusammenzuführen.
3. Sage Deiner Frau und Deinen Eltern oder Verwandten, sie sollen Dir ruhig und sachlich berichten, wie es zu Hause aussieht, und wie es den Leuten geht. Als Soldat hast Du ein Recht, es zu wissen.
4. Sieh Dir gut an, was in der Heimat alles durch Luftangriffe zerstört ist, und sieh Deine Schlüsse, damit Du den Kameraden berichten kannst, wie es mit den Siegesaussichten bestellt ist.
5. Hab' ein Auge auf solche Parteibosse, die die Leute drangsalieren und ausländische Arbeiter und Kriegsgefangene misshandeln oder die Zwangsrekrutierung dazu benutzen, sich persönlich zu bereichern. Merk' Dir die Namen.
6. Wenn Du ruhende Gunst Geschwätz hörst über eine plötzliche Wendung in der Kriegslage, über Wunderwaffen usw., dann kläre die Leute darüber auf, dass es sich um Flüstern der Partei handelt. Sie will bloss einen Krieg verlängern, der länger entschieden ist.
7. Soldat sein, heißt den Tatsachen klar ins Auge schauen. Fragt Dich jemand im Vertrauen: "Wie lange kann Deutschland den Völkerringkrieg gegen solche Uebermacht noch aushalten?" — nun, es sieht bei Dir, den Leuten nichts voraus machen!

Jawohl, diese Ratschläge kommen vom Gegner. Aber bedenke, dass sich die Absicht der Alliierten, unnützes Blutvergießen in einem bereits entschiedenen Krieg zu vermeiden, auch mit Deinem eigenen Interesse deckt.

...and reality

7 SUGGESTIONS FOR MEN ON LEAVE:

1. Don't hide the facts about conditions at the front from your people. But also tell them that should they receive news via the Red Cross that you are an Allied prisoner of war, they can rest assured that you are safe and will return home as soon as possible after the war.
2. If your people live in a frontier area, tell them not to let themselves be evacuated when the front approaches their way, but to stay put if they can possibly find a safe place. The Allies will treat them decently. It's the best way to keep the family together.
3. Tell your wife or your parents or relations to write to you quietly and soberly how things are at home and how people are behaving. You're a soldier, and you have a right to know.
4. Take a good look at all the war damage from air raids at home and draw your conclusions so that you can give your comrades the real information about the chances of victory.
5. Keep your eyes open for Nazi Party bosses who bully ordinary people, or who are mistreating foreign workers and prisoners of war, or who take advantage of compulsory evacuation to enrich themselves. Remember their names.
6. Should you hear silly rumours about a wonderful turn in the war, miracle weapons and the like, explain to people that these rumours are spread by Nazi Party "whispering propaganda" — designed to prolong a war that's already decided.
7. To be a soldier means to look facts in the face. When some one asks you in confidence: "How much longer can we possibly fight on so many fronts against odds?" — "Well, it's up to you not to spread false hopes."

Yes; this advice comes from the enemy. Remember, however, that the desire of the Allies to avoid needless bloodshed in a war that is already decided, coincides with your best interest, too.

To them it's a Joke!

What's wrong with this crazy war? Now it's the great temptation of the day, at least for the stay-at-homes. They want to get a glimpse of something to make their flesh creep, just a wee bit, by God, enough to get a pleasant shudder down the back, nothing more.

So they put together a film with the title «Roman Romance». Not that it ever entered their heads to make it in Italy, that might be too dangerous. They simply built up Rome in Hollywood and provided the necessary war accessories, as is shown by the following description in the «New York Herald Tribune»:

«A shocking accident has taken place during the making of the new film «Roman Romance». In order to reproduce artillery fire, mines were laid in the ground which were electrically fired. As the results at the first trial did not satisfy the producer, stronger mines were tried in succession. The last experiment was certainly most realistic, but when the smoke of the explosion had cleared away, the «battlefield» was strewn with the bodies of six dead and fourteen wounded. The work on the film had to be interrupted for a few days, as the performers went on strike. Only after Warner Brothers had offered them a rich bonus and an insurance could the work proceed. The film promises to be a great success.»

So this is what the «amusing war» they are making at home looks like. To those at home it does not matter a damn that in this cursed Italy thousands of your sons are giving up their lives. All they care for is to have their bit of fun and their big business.

They also don't give a damn for the fact that, for their amusement, six young men should lose their lives and several others be crippled for life.

Is it any wonder that the producer's name is Samuel Warner? He's of course a Jew - did you ever know a Jew who had anything in his mind but his own profit? As a matter of fact it's the Jews who plotted this war and their sole object was to satisfy their greed for gold. It's nothing but

a Jewish war - and an American fight!

MILITARY authorities demanded a nationwide war on VICE.

They got a sham battle—a polite blood testing campaign which would not alarm ladies-aid societies and parent-teachers associations.

NEVERTHELESS, police raided a large number of cabarets, dance halls and joints in 21 small, medium, and large cities.

These raids showed that of the 20,000 women investigated a staggering proportion had venereal diseases.

OVER 80% had V. D.

21% were prostitutes.

Of the 79% non-professionals

61% were pickups,

18% were girl friends.

17% were girls under 20 years.

84% were wives of men serving in the armed forces **ABROAD**.

BOTH groups were mostly members of the growing band of "V" girls, who declare that they feel a pathetic compulsion to console troops.

IS YOUR GIRL AMONG THEM?

YOU CAN'T TALK V. D. OUT OF EXISTENCE—IT IS THERE!

GUARD AGAINST VENEREAL DISEASES

Lately there has been a great increase in the number of venereal diseases among our officers and men owing to prolific contacts with Filipino women of dubious character.

Due to hard times and stricken conditions brought about by the Japanese occupation of the islands, Filipino women are willing to offer themselves for a small amount of foodstuffs. It is advisable in such cases to take full protective measures by use of condoms, protective medicines, etc.; better still to hold intercourse only with wives, virgins or women of respective character.

Furthermore, in view of the increase in pro-American leanings, many Filipino women are more than willing to offer themselves to American soldiers, and due to the fact that Filipinos have no knowledge of hygiene, disease carriers are rampant and due care must be taken.

A man's foes shall
be they of his own
household.

St. Matthew 10, 36

So is it with a country's foes. Of course you know that under the guise of Democratic America, there is the Plutocratic Dynasty of America's sixty wealthiest families, such as the Morgans, the du Ponts, the Rockfellers, the Drexels, the Sloans, the Vanderbilts, the Roosevelts, etc., etc. It is these Dynasty rulers, you may well know, that plunged America into war in order to reap its fruits by the toil, sweat, blood and tears of you American soldiers.

IT IS DANGEROUS TO READ THE FOLLOWING:

1. Don't pretend lunacy. Your surgeon will detect such deception, and you are sure to be tried by court-martial. Or if you succeed in passing as a lunatic, you will be invalided home, without any more chance to rejoin your comrades at the front.

2. Don't spit freely. If you do, you will be obsessed with the habit of spitting. And remember, it is an early symptom of neurosis.

3. Don't think the reverse of everything you chance to hear. Or it will easily become habitual with you and develop into regular symptoms of neurosis.

4. Don't try to practise sleeping in a fixed posture. This is also one of the symptoms of neurosis. It is contagious to your comrades-in-arms.

5. Don't be so nervous as to feel your heart-beat from time to time. Such a symptom always appears in the early stages of lunacy.

6. Don't worry about the color of your urine or excrement. This is also an early symptom of lunacy.

7. One week's practise is enough to feign naturally the tremor of your hands, shoulders and

legs. The tremor of the head, especially, is the most conspicuous sign of neurosis.

8. If you practise to quickly roll your eyeballs horizontally without moving your head, it will soon become habitual. This particular movement of the eyeballs precludes serious neurosis. Even without such a practice, your eyeballs will soon begin to tremor unwittingly if you are constantly worried about it.

9. Don't fall into the habit of glancing sideways at your comrades-in-arms. Your surgeon dislikes such a habit, as it predicts the approaching menace of neurosis.

10. Don't eat your own excrement or drink your own urine in the presence of others. If you do, you are sure to be branded as a lunatic, however warmly you may protest.

11. Don't mumble the same words immediately after you have spoken them. If you practise it repeatedly, your surgeon's verdict will inevitably be neurosis.

12. Don't try to develop your imaginative power to the extent that all human faces look like animals. Or you are likely to see no more human faces even on your friends.

13. Don't imitate an epileptic fit. If you practise it for three days, you will certainly have a real one. Then you are on your way to lunacy.

The Girl You Left Behind

To-day she is pulling down 60 bucks.....

SAM KNOWS WHAT HE WANTS

Two years ago, comely Joan Hopkins was still a salesgirl behind the ribbon counter in a New York 5 & 10 cts. store getting 12 dollars a week.

To-day she is pulling down 60 bucks as the private secretary to Sam Levy. Business is excellent and Sam is making a pile of dough on war contracts.

FOR HIM THE SLAUGHTER CAN'T LAST LONG ENOUGH.

Sam has no scruples about getting a bit intimate with Joan. And why should he have any? Tall and handsome Bob Harrison, Joan's fiancé, is on the front, thousands of miles away, fighting for guys like Sam Levy.

Joan loves Bob, but she doesn't know WHEN HE WILL COME BACK.

Look for the other pictures of this series.

The Girl You Left Behind

Joan is feeling so lonely anyway.....

SAM AT WORK

After his arrival in New York City, cigar-chewing Sam Levy, a steerage passenger from eastern Europe, used to live on the lower East Side not far from the Bowery. Soon he was able to move to upper Broadway. When President Roosevelt took those steps short of war, Sam had already leased a ten room apartment on Riverside Drive.

Slick-haired home-front warrior Mordecai Ezekiel, boss of a government department in Washington, saw to it that his chum Sam would be on the earning end of the war. Rich profits on war contracts let Sam climb up the social ladder, taking two steps at one time. He is now residing in a duplex de luxe apartment on swanky Park Avenue.

Why shouldn't Sam invite beautiful Joan Hopkins, his private secretary, former 5 & 10 cts. salesgirl, up to his place to have dinner with him and cocktails.

Joan is feeling so lonely anyway. More than two years ago, Bob Harrison, the man she wanted to marry, had to leave her for the battlefields of Europe, thousands of miles away.

He is fighting there for Sam Levy and his kind.

Joan is hoping that Bob will return to her safe and sound. But she knows that many of her girl friends are already waiting in vain for their men to return.

Sam knows her predicament and he is trying his darnedest to cheer her up.

Why, Bob wouldn't know it anyway! And what's a little kiss among friends?

[back](#)

The Girl You Left Behind

Poor little Joan! She is still thinking of Bob.....

THE WAY OF ALL FLESH

When pretty Joan Hopkins was still standing behind the ribbon counter of a 5 & 10 cts. store on 3rd Avenue in New York City, she never dreamed of ever seeing the interior of a duplex Park Avenue apartment. Neither did young Bob Harrison, the man she loves. Bob was drafted and sent to the battlefields in Europe thousands of miles away from her. Through Lazare's Employment Agency Joan got a job as private secretary with wily Sam Levy. Sam is piling up big money on war contracts. Should the slaughter end very soon, he would suffer an apoplectic stroke.

Now Joan knows what Bob and his pals are fighting for.

Joan always used to look up to Bob as the guiding star of her life, and she was still a good girl when she started working for Sam Levy. But she often got the blues thinking of Bob, whom she hadn't seen for over two years. Her boss had an understanding heart and was always very kind to her, so kind indeed, that he often invited her up to his place. He had always wanted to show her his "etchings". Besides, Sam wasn't stingy and each time Joan came to see him, he gave her the nicest presents. Now, all women like beautiful and expensive things. But Sam wasn't the man you could play for a sucker. He wanted something, wanted it very definitely.....

Poor little Joan! She is still thinking of Bob, yet she is almost hoping that he'll never return.

The Girl You Left Behind

It was a rude awakening for her.....

THE MOMENT SHE DREADED

Forgotten are the days when shapely Joan Hopkins was still selling ribbons in a 5 and 10 cts. store in New York City. As private secretary to slick Sam Levy, big money maker in the war business, she rose to be a sugar daddy's darling.

Sam didn't have any cash when he got started, and he doesn't like to be reminded of his early days on the lower East Side. The war was just the right thing for him. Like many other home-warriors he made the grade piling up dough and growing fat on the sacrifices of those young American boys fighting on foreign battlefields.

At heart Joan is not a bad woman. For over two years she had not seen her fiancé, clean-cut Bob Harrison, whom she cares for very much. Bob was shipped to Europe to fight for the cause of Sam Levy and his kind.

Two years is a long time for any girl.

For more than half a year she had not heard from Bob. He seemed to be among the missing.

Some sunny afternoon, however, just when Joan and Sam were stepping out of fashionable Bonwit Teller's shop on Fifth Avenue, she was struck speechless by the sight of a man in uniform.

It was a rude awakening for her. And it was also a dreadful blow to Bob, for it was he who suddenly stood opposite her - on crutches, one leg amputated.

Two lives - lost to one another forever.

الحكومة البريطانية

BRITISH GOVERNMENT

الى كل عربي كريم

السلام عليكم ورحمة الله وبركاته وبعد ، فاحمل هذا الكتاب ضابط بالجيش البريطاني وهو صديق وفي لكافة الشعوب العربية فترجو أن تعاملوه بالعطف والاحرام . وأن تحافظوا على حياته من كل طارئ ، ونأمل عند الاضطرار أن تقدموا له ما يحتاج اليه من طعام وشراب . وان ترشدوه الى أقرب معسكر بريطاني . وستكافئكم مالياً بسخاء على ماتسدونه اليه من خدمات . والسلام عليكم ورحمة الله وبركاته

القيادة البريطانية العامة في الشرق الاوسط

To All Arab Peoples — Greetings and Peace be upon you. The bearer of this letter is an Officer of the British Government and a friend of all Arabs. Treat him well, guard him from harm, give him food and drink, help him to return to the nearest British soldiers and you will be rewarded. Peace and the Mercy of God upon you. *The British High Command in the East.*

SOME POINTS ON CONDUCT WHEN MEETING THE ARABS IN THE DESERT.

Remove footwear on entering their tents. Completely ignore their women. If thirsty drink the water they offer, but DO NOT fill your waterbottle from their personal supply. Go to their well and fetch what you want. Never neglect any puddle or other water supply for topping up your bottle. Use the Halazone included in your Aid Box. Do not expect breakfast if you sleep the night. Arabs will give you a mid-day or evening meal. Always be courteous.

REMEMBER, NEVER TRY AND HURRY IN THE DESERT, SLOW AND SURE DOES IT.

Skorpion Informationsdienst

In den spärlichen Stimmen des Londoner Rundfunks zur Westfront spiegelt sich in zunehmendem Maße die Angst wieder, die deutsche Offensive könnte noch weitere ungeahnte und unüberschbare Ausmaße annehmen:

20. 12. 44. — 16.00 Uhr: Unser Korrespondent meldet, daß der Höhepunkt des deutschen Angriffes noch nicht erreicht ist.
17.00 Uhr: Es liegen keine Anzeichen eines Nachlassens des deutschen Gegenangriffes vor.
18.00 Uhr: Die deutschen Anstrengungen lassen darauf schließen, daß ein noch stärkerer Angriff zu erwarten ist.
21. 12. 44. — 12.00 Uhr: Man kann nicht verschweigen, daß deutsche Vorhuten noch immer im Vordringen sind.
16.30 Uhr: Aus den Frontberichten geht hervor, daß die Deutschen weitere beträchtliche Fortschritte machen.
21.00 Uhr: Die 1. Armee arbeitet Tag und Nacht, um Widerstandslinien zu errichten, aber dies dauert seine Zeit und die deutsche Offensive kann inzwischen weitergehen.
0.05 Uhr: Die deutsche Gegenoffensive nach Belgien und Luxemburg nimmt aufgrund jüngster Berichte, an Geschwindigkeit weiter zu.
22. 12. 44. — 7.00 Uhr: Der deutsche Vormarsch ist nicht zum Stillstand gekommen. Man muß mit einem weiteren Ansteigen der feindlichen Flut rechnen.

Stimmen zu den Fronten.

„Die gegenwärtige Schlacht im Westen ist die schrecklichste des ganzen Krieges. Es wird mit einer Erbitterung ohnegleichen gekämpft. Ehe man ein Urteil über die Lage geben kann müssen neue Nachrichten abgewartet werden“. (Berichterstatte Eduard Beek, Radio London)

„Die deutsche Offensive ist gefährlich für uns. Es handelt sich um ein Unternehmen großen Stils, um unsere Pläne zu stören und unser Hinterland und seine Verkehrswege in Verwirrung zu bringen“. (Radio London)

„Es ist nicht zu vermeiden, daß auch die Alliierten an manchen Abschnitten schwächer sind. Es ist auch normal, daß der Feind Boden gewinnt. Dieser Angriff zeigt aber deutlich, daß man sich, solange der Krieg nicht zu Ende ist, nicht in leichtfertigen Träumereien verlieren darf“ — meldet der alliierte Kriegsberichterstatter Paul Levy aus Belgien.

„Die deutsche Gegenoffensive im Westen stellt nur einen Teil eines allgemeinen Planes des OKW. dar, der darauf hinzielt, die Vorbereitungen der Alliierten für entscheidende Kämpfe um die Ruhr- und Saar-Industriezentren mehr oder weniger auszuschalten“. („Roter Stern“, Moskau)

„Aus dem deutschen Schweigen und dem alliierten Geschrei läßt sich nur eines ableiten: Die völlige Verwirrung in den angloamerikanischen Befehlsstellen, die überrascht wurden und sich noch immer nicht von ihrem Schrecken erholt haben“. (Span. Zeitung Informaciones)
Fliegende Bomben über der alliierten Front. „Das anhaltende Feuer der fliegenden Bomben liegt auf den englischen Truppen“. (Radio London) — „Fliegende Bomben fallen so zahlreich in die Linien der 1. amerikanischen Armee als im letzten Sommer auf London niedergingen. (Radio London)

„Es ist klar, daß sich die deutsche Offensive noch in vollem Schwung befindet“. (Times) — Es ist doch klar, daß die feindliche Offensivmaschine auf höchsten Touren läuft“. (Radio London)

Tiefe Einbrüche in die amerikanischen Linien. „Tiefe Einbrüche des Feindes bleiben noch wieder gut zu machen“. (Daniel Moore, Radio London) — „die deutsche Offensive erzwingt größere Einbrüche“. (Reuters Sonderkorrespondent William Steen) — „Es wird von weiteren vier Einbruchstellen gesprochen“. (Radio London)

Mitteilungen für die Truppe

Die Mitteilungen dienen als Unterlage für Kompanie-Besprechungen.

Gedanken zum Volksturm

Vielen Soldaten ist das berühmte Defregger-Gemälde „Das letzte Aufgebot“ bekannt. Es schildert den Aufbruch der Tiroler Bergbauern beim Eindringen der napoleonischen Heere in ihre Heimat. Als durch Führererlass der Volksturm aufgestellt wurde, mag bei vielen der Gedanke aufgetaucht sein, ob es etwa mit diesem Volksturm die gleiche Bewandnis wie damals hätte, ob nun auch die Greise und Kinder als letztes Aufgebot unter die Waffen gerufen werden, ob auch sie nun mit primitivsten Waffen ausgerüstet sich als letztes Aufgebot an die bedrohte Grenze stellen würden, um ihr geliebtes Vaterland zu verteidigen.

Dieser Gedanke findet seine augenblickliche Widerlegung, wenn man sieht, wie der Volksturm aufgebaut ist, und wenn man darüber Klarheit gewinnt, welche Aufgaben dem Volksturm zufallen. Zum Volksturm wurden die 16- und 60-jährigen aufgerufen, und es hat sich gezeigt, dass die überwiegende Mehrzahl der Volksturmmänner sich aus den Angehörigen unserer besten Männerjahrgänge zusammensetzt. Es sind dies die vielen Uk-Gestellten aus der Rüstung, der Wirtschaft und dem Landvolk, die entlassenen Kriegsverwundeten, die nicht einberufenen Körperbehinderten. Über die Altersgrenze der 60 hinaus haben sich viele Männer, alte gediente Soldaten, freiwillig gemeldet.

Der Aufbau des Volksturms liegt in der Hand der Partei und ihrer Gliederungen, der SA und des NSKK.

Bei der Auswahl der Führer bis zu den kleinsten Einheiten wird von dem Gesichtspunkt ausgegangen, daß nur der in jeder Lage Bewährte im Volksturm führen kann.

Als die Volksturmbataillone durch die Städte zur Verteidigung marschierten, konnte man auch die ausgezeichnete Bewaffnung unserer Volksturmmänner beobachten. Vom neuesten Gewehr und Maschinengewehr bis zu „Panzerfaust“ und „Panzerschreck“ waren alle Waffen vertreten, und die Lüge vom Dreschflegel und der Sense und der altertümlichen Schrotflinte wurde ad absurdum geführt. Die Gesichter der Volksturmmänner sahen absolut nicht wie ein letztes Aufgebot aus.

Der Gegner hat das Lachen über den Volksturm schnell aufgegeben und sich zu der Erkenntnis durchgerungen, dass der Volksturm eine sehr ernstzunehmende Tatsache darstellt. Wie sich der Volksturm schlägt, das beweist sein erster Einsatz in Ostpreußen. Nur ein einziges Beispiel von vielen sei herausgegriffen, wo ein 16-jähriger Hitlerjunge angesichts zweier einbrechender T 34 aus dem Deckungsgraben springt und beide mit der „Panzerfaust“ erledigt. Kurze Zeit später wurden dem tapferen Jungen das EK 1 und zwei Panzervernichtungsabzeichen angeheftet.

Die Zeit wird beweisen, daß der Volksturm kein letztes Aufgebot, sondern im Gegenteil die machtvollste Demonstration einer Stärke darstellt, die auch heute im sechsten Kriegsjahr immer wieder aus dem deutschen Volk erstrahlt. Je härter der Kampf, um so fanatischer die Entschlossenheit, unseren verfluchten Feinden die Stirn zu bieten, und daß der Volksturm hierbei ein gewichtiges Wortlein mitzusprechen hat, das liegt in dem harten Einsatzwillen der Volksturmmänner begründet.

Die berühmten amerikanischen Freiheiten

Vor seiner vorigen Wahl hatte der amerikanische Präsident Roosevelt bekanntlich versprochen, kein amerikanischer Soldat werde außerhalb des Landes eingesetzt werden. Als er nachher das Gegenteil tat, begründete er seinen Wortbruch mit der Behauptung, er müsse der vom Nationalsozialismus geknechteten deutschen Menschheit die amerikanischen Freiheiten bringen, die Freiheit der Gedanken, des Wortes, der Schrift und des Glaubens.

Wie diese Freiheiten in Wirklichkeit aussehen, dafür gibt ein Bericht des Militärkorrespondenten im amerikanischen Europasender vom 20. November 1944 Aufschluß. In der kleinen Stadt Gangeln an der deutsch-niederländischen Grenze trafen die Amerikaner nur noch wenige Leute an. Aber folgende Maßnahmen, so berichtet der Korrespondent, sind getroffen worden:

1. Das Betreten der Straße wurde den Bewohnern nur zwischen 12 und 13 Uhr gestattet.
2. Für jeden anderen Ausgang ist ein besonderer Passierschein nötig.
3. An jedem Haus muß ein Schild hängen mit dem Verzeichnis aller Bewohner.
4. Die deutschen Zivilisten erhalten weder Nahrungsmittel, ~~Wohnungsmittel~~, noch andere Versorgungsgüter usw.

Als Zweck der Militärverwaltung wird bezeichnet, zu beweisen, daß die Amerikaner als Eroberer gekommen sind.

Es ist das gleiche Bild überall. Aus dem Kampfraum Aachen liegen zahlreiche Meldungen vor, wie die Häuser ausgeplündert worden sind. Bei der Vernehmung der Kriegsgefangenen fungierten fast ausschließlich Juden. Die Behandlung der Gefangenen war miserabel, ihre Orden und Ehrenzeichen wurden ihnen geklaut, und man ließ sie tagelang hungern.

Erstaunen können diese Tatsachen niemanden, der die amerikanischen Verhältnisse wirklich kennt und aus den vergangenen Jahren weiß, wie dieses reiche Land mit seinen eigenen Erwerbslosen umsprang. Erst kürzlich las man in einer amerikanischen Zeitung, es sei viel zu viel Aufhebens von den 12 Millionen Erwerbslosen gemacht worden, warum man sie nicht habe „verrecken“ lassen?

Kein politisch geschulter Soldat läßt sich mehr durch tonende Worte über angebliche amerikanische Errungenschaften bluffen.

Von den amerikanischen Freiheiten ist die Freiheit zu hungern den breiten Massen des Volkes am vertrautesten geworden. Würde der eiskalte Dollarimperialismus von drüben je über Deutschland Macht gewinnen, so wissen wir, was dann die Uhr geschlagen hätte. Und darum wird das deutsche Volk das Äußerste tun, eine Versklavung durch den amerikanisch-jüdischen Hochkapitalismus zu verhindern.

Ein gescheiter und nachdenklicher Brief über das Thema „Muss das sein?“

Ein Frontbrief bringt die folgenden Ausführungen, die uns alle angehen. „Der Krieg bringt zwangsläufig einen großen Verschleiß mit sich, aber wieviel wird sinnlos und leichtsinnig verschleudert! Vater, Mutter, Frau und Schwester stellen im Arbeitsprozeß, um die Abnutzung, die der Krieg nun mal mit sich bringt, wieder

[back](#)

Für Offiziere!

SCHULUNGSBLATT für deutsche Truppen

Die nachstehenden Auszüge aus dem Wehrmachtsbericht des Monats Februar, im Wortlaut des O.K.W., mit einigen zusätzlichen Erläuterungen, sind für Verwendung in der Wehrbetreuung sowie bei Ansprachen an die Truppe vorzüglich geeignet.

- FEBRUAR 1944. Das O.K.W. gibt**
- 9.2.44 * Der Ort JAMBURG wurde nach hartem Kampf aufgegeben. *
- 9.2.44 * Weiter nordwestlich wurden die Orte ROWNO und LUZK aufgegeben. *
- 9.2.44 * Der Brückenkopf von NIKOPOL wurde befehlungslos geräumt. *
- 10.2.44 * Zwischen ILMENEE und PLIPUSSEE setzten sich unsere Verbände zur Verklärung der Front befehlungslos ab. *
- 14.2.44 * Die Stadt LUGA wurde in diesem Zusammenhang geräumt. *
- 16.2.44 * Südlich des ILMENEESEE wurde die Stadt STARAJA RUSSA, ohne Behinderung durch den Feind zur Verklärung der Front geräumt. *
- 21.2.44 * Im Nordteil der Ostfront zogen sich unsere Divisionen an einigen Abseitsstellen zur Verklärung der Front planmäßig vom Feinde ab. Die nachdringenden Bolschewiken wurden abgeschlagen. *
- SEITEERKLÄRUNGEN:** Die Ostfront im Februar:
- Der Monat Februar begann mit Misserfolgen im Norden der Ostfront.
- Zur gleichen Zeit konnten die Russen ihren Vorstoß nach POLEN durch die Eroberung von ROWNO und LUZK ausweiten.
- In der zweiten Februarwoche verschlechterte sich die Lage der deutschen Armeen im DNIEPR-Bogen. Der unrettlich wichtige Brückenkopf von NIKOPOL wurde befehlungslos aufgegeben.
- Auch im Norden mußte darauf die Front widerstandsfähig (begehrig) verankert werden. Die übrigen Abseitsbewegungen sind ein chronisches Übel der Heeresleitung und werden regelmäßig mit der planmäßigen Räumung wesentlicher Stützpunkte.
- Diesmal LUGA. — Es ist Mitte Februar.
- ... Die Schlacht geht weiter.
- Kann man es den Russen zum Vorwurf machen, dass sie die Deutschen an der Aufgabe von STARAJA RUSSA nicht mit lauten Protest hindern?
- Was hier vorgeht ist, wie man sieht, nur ein planmäßiges, koordiniertes und zur Verklärung der Front befehlungslos durchgeführtes Rückzug, der gelegentlich von ein paar nachdringenden Bolschewiken ganz unerbittlich gestoppt wird.

(Fortsetzung Seite 1)

(Fortsetzung von Seite 1)
O.K.W.:

- 22.2.44 * Die Trümmerfelder der ehemaligen Stadt CHOLM wurden im Zuge einer vorgenommenen Abseitsbewegung geräumt. *
- 20.2.44 * Die Stadt KRIVOI-ROG wurde nach erbittertem Kampfe geräumt. Im Nordabschnitt der Ostfront verlaufen unsere Abseitsbewegungen südwestlich und westlich des ILMENEESEE planmäßig. *
- 15.2.44 * Der Ort ROGATSCHEW wurde in der Nacht zum 14.2. geräumt. *
- 11.2.44 * Im Nordabschnitt der Front setzten sich unsere Truppen weiter planmäßig ab. *

SEITEERKLÄRUNGEN:

Alle Abseitsbewegungen sind natürlich durch die Klagen der oberen Ebenen, des deutschen High Command, verursacht. Und CHOLM geht verloren.

... während im Süden, nach dem Mangieren von NIKOPOL, nun auch das Elben von KRIVOI-ROG zum Trüffeld geht. Das alles geschieht (wohl verstanden) planmäßig, und die Katastrophe im Osten verläuft, wie immer, glänzend organisiert und kalibriert berechnet durch das O.K.W.

Unaufhaltsam vollzieht sich gegen Ende Februar der deutsche Rückzug an der Russischen Front. ROGATSCHEW fällt.

... die Schlacht geht weiter. Plan- und befehlungslos, nach dem Willen einer unerschütterlichen Führung!

DIE NACHFOLGENDEN NACHRICHTEN VERDIENEN EBENFALLS DER ERWÄHNUNG:

Washington, den 28.2.1944. Seit Inkrafttreten des amerikanischen Kriegshilfsplans für Russland, im Oktober 1941, wurden laut einer Mitteilung des Wirtschaftsrats 6,5 Millionen Tonnen Versorgungsgüter nach Russland transportiert und dort abgeliefert. Die Verluste an Frachtschiffen betragen ein Prozent.

Danzig. General der Flieger QUADE erklärte vor einem Danziger Hörerkreis, dass jeder der über die zu geringe Anzahl von abgeschossenen Feindflugzeugen bei Luftkämpfen meckelt, doch selbst einmal versuchen solle, einen Spitz im Flug bei Dunkelheit mit Taschenlampe und Revolver herauszufischen.

London. In der Nacht vom 15. auf 16. Februar wurde die RAF innerhalb von 30 Minuten über 2000 Tonnen Bomben auf Ziele in Berlin ab. 43 Flugzeuge kehrten von dieser und anderen Nachschüßungen nicht zurück. Dieser bisher größte Luftangriff des Krieges war für Deutschland so schwer wie der schwerste Angriff der deutschen Luftwaffe auf London (am 10. Mai 1941). Damit wurde in 15 Minuten der drei letzten Monate durchgeführte Großangriff eines Bombenflotten von insgesamt 2300 Tonnen auf die Reichshauptstadt abgeworfen.

Die in diesem Schulungsblatt für deutsche Truppen angeführten Tatsachen und Äußerungen dürften zur Genüge beweisen, dass Deutschlands Lage, bereits beim gegenwärtigen Stande des Krieges, eine hoffnungslose ist.

4-1

FOR OFFICERS!

INFORMATION SHEET For German troops

The following extracts from the communiques of the month of February, in the words of the German High Command and with certain additional comments, are extremely suitable to be used for instruction of the troops, and for answering any questions which they may ask.

- FEBRUARY 1944. The O.K.W. states:**
- 2-2-44 * The town of JAMBURG was evacuated after bitter fighting. *
- 3-2-44 * Further to the NW the towns of ROWNO and LUZK were evacuated. *
- 9-2-44 * The bridgehead of NIKOPOL was evacuated according to plan. *
- 10-2-44 * Between L. ILMEN and L. PEIPUS our troops withdrew in order to shorten the front. *
- 14-2-44 * In connection with this the town of LUGA was evacuated. *
- 16-2-44 * South of L. ILMEN the town of STARAYA RUSSA was evacuated, without hindrance from the enemy, in order to shorten the front. *
- 21-2-44 * In the Northern part of the Eastern front our Divisions withdrew from the enemy in some places in order to shorten the front. The pursuing Bolsheviks were beaten off. *
- COMMENTS: The Eastern Front in February:**
- The month of February opened with defeats on the Northern part of the Eastern front.
- At the same time the Russians were able to broaden their offensive towards Poland by the capture of ROWNO and LUZK.
- In the second week of February the situation of the German armies in the DNIEPER bend worsened.
- The important and irreplaceable bridgehead of NIKOPOL was evacuated according to plan.
- In the North, too, it was necessary, according to plan, of course, to shorten the front still further. These perpetual withdrawals are a chronic illness of the High Command and always result in the giving up of important bases.
- This time it is LUGA. It is the middle of February. The battle goes on.
- Can one really blame the Russians for not hindering the Germans, with a loud protest, from evacuating STARAYA RUSSA?
- What is happening here, as one sees, is simply a planned orderly and deliberate retreat for the shortening of the front, which is now and then almost unnoticeably disturbed by a few pursuing Bolsheviks.

(Continuation of p. 1)

O.K.W.:

- 22-2-44 * The ruins of what was the town of CHOLM were evacuated in the course of a planned withdrawal. *
- 20-2-44 * The town of KRIVOI-ROG was evacuated after bitter fighting in the Northern Sector of the Eastern Front our planned withdrawals West and Southwest of Lake ILMEN are continuing. *
- 15-2-44 * The town of ROGATSCHEV was evacuated in the night of the 14th and 15th February. *
- 11-2-44 * In the Northern sector of the front our troops continued their planned withdrawal. *

COMMENTS:

All withdrawals have, it will be noticed, been clearly foreseen by the all-knowing German High Command. And now CHOLM is lost.

... While in the South, the iron ore of KRIVOI-ROG goes the same way as the manganese ore of NIKOPOL.

All this, be it noted, is happening according to plan, and the catastrophe on the Eastern Front is taking its course, as always, in accordance with the faithless and cold-blooded calculations of the German High Command.

... As February draws to a close the German retreat on the Russian Front continues without cessation. ROGATSCHEV falls.

... and the battle continues, planned and by order, in accordance with the unmistakable will of the German High Command.

THE FOLLOWING NEWS IS ALSO WORTHY OF MENTION:

Washington, 28 Feb. 44. Since the coming into force of the American Lend-Lease plan for Russia in October 1941, 6.5 million tons have been delivered to Russia, according to a statement of the Administrator. The rate of shipping-losses amounts to 1%.

Danzig. General of the Air Force QUADE declared to a Danzig audience, that anyone who complains of the small number of Allied raiders brought down, when equipped with a pocket-flashlight and a revolver, should himself try to bring down a sparrow flying in the dark.

London. In the night of Feb 15th - 16th the RAF dropped 2,500 tons of bombs on targets in Berlin within the space of 30 minutes. From this and other operations that night, 43 planes failed to return. This, till now the greatest air-attack of this war, was five times as heavy as the heaviest German air-raid on London (that of May 10th 1941). With this RAF raid the weight of bombs dropped on the Reich capital in 15 heavy raids spread over the last 3 months is brought up to 23,500 tons.

The facts and utterances given in this Information Sheet for German troops should suffice to show that Germany's situation is now completely hopeless.

President Roosevelt's Unanswered Letter to the Emperor Hirohito

On December 6, 1941, Franklin D. Roosevelt, President of the United States, addressed a courteous and statesmanlike letter to His Imperial Majesty, Emperor of Japan. The letter was written in a final effort to avert war between the two countries and was forwarded to His Imperial Majesty through the usual diplomatic channels. The letter was never answered. It is unthinkable that any Japanese would be guilty of the gross discourtesy of ignoring a polite and important letter. On December 7, 1941 the Japanese armed forces attacked the United States in Hawaii. It is therefore quite obvious that the letter from President Roosevelt was never delivered to the Emperor. Had it not been kept from him, the war might well have been averted. The letter appears within.

去る一九四一年十二月六日ルーズベルト大統領は天皇陛下に、
に鄭重して政治家らしく親書を捧呈されたが此のメソジは日
米衝突の事態を避ける最後の手段として書かれたものである
而して此の親書は通常の外交機關を通じて陛下に捧呈せられ
たのであるが、陛下からは何の回答も無かつた。
日本人が斯くも禮儀を盡した且つ重要な親書を無視する
程失禮であるとは考えられない。所が日本の海軍は昭和十六
年十二月七日布達を攻撃し、我が米國合衆國に對して戦開を
開始したのであつた。
故にルーズベルト大統領の親書が天皇陛下に傳達されなか
つた事が明かである。若し陛下の風耳に達してゐたならば
今日の日米戦争を防止する事が出来てゐたであらう。
ルーズベルト大統領の親書を内閣に紹介しやう。

發行所 亞米利加政務

His Imperial Majesty Hirohito, Emperor of Japan:

"Only in situations of extraordinary importance to our two countries need I address to your Majesty messages on matters of state. I feel I should now so address you because of the deep and far reaching emergency which appears to be in formation. Developments are occurring in the Pacific area which threaten to deprive each of our nations and all humanity of the beneficial influence of the long peace between our two countries. Those developments contain tragic possibilities.

The people of the United States, believing in peace and in the right of nations to live and let live, have eagerly watched the conversations between our two governments during these past months. We have hoped for a termination of the present conflict between Japan and China. We have hoped that a peace of the Pacific could be consummated in such a way that nationalities of many diverse people could exist side by side without fear of invasion, that unbearable burdens of armaments could be lifted from them all, and that all peoples could resume commerce without discrimination against or in favor of any nation.

"I am certain that it will be clear to your Majesty, as it is to me, that in seeking these objectives, both Japan and the United States should agree to eliminate any form of military threat. This seemed essential to the attainment of the high objectives."

"More than a year ago your Majesty's Government concluded an agreement with the Vichy Government by which five or six thousand Japanese troops were permitted to enter northern French Indo-China for the protection of Japanese troops which were operating against China further north. And this spring and summer the Vichy Government permitted further Japanese military forces to enter into southern French Indo-China for the common defense of French Indo-China. I think I am correct in saying that no attack has been made upon Indo-China nor that any has been contemplated.

"During the past few weeks it has become clear to the world that Japanese military, naval and air forces have been sent to southern Indo-China in such large numbers as to create a reasonable doubt on the part of other nations that this continuing concentration in Indo-China is not defensive in its character.

"Because these continuing concentrations in Indo-China have reached such large proportions and because they extend now to the southeast and the southwest corners of that peninsula, it is only reasonable that the people of the Philippines, of the hundreds of islands of the East Indies, of Malaya and of Thailand itself are asking themselves whether these forces of Japan are preparing or intending to make attack in one or more of these many directions."

"I am sure that your Majesty will understand that the fear of all these peoples is a legitimate fear, inasmuch as it involves their peace and their national existence. I am sure that your Majesty will understand why the people of the United States in such large numbers look askance at the establishment of military, naval and air bases manned and equipped so greatly as to constitute armed forces capable of measures of offense.

"It is clear that a continuance of such a situation is unworkable.
"None of the peoples whom I have spoken of above can sit either indefinitely or permanently on a keg of dynamite.
"There is absolutely no thought on the part of the United States of invading Indo-China if every Japanese soldier or sailor were to be withdrawn therefrom.

I think that we can obtain the same assurance from the governments of the East Indies; the governments of Malaya and the Government of Thailand. I would even undertake to ask for the same assurance on the part of the Government of China. Thus a withdrawal of the Japanese forces from Indo-China would result in the assurance of peace throughout the whole of the South Pacific area.

"I address myself to your Majesty at this moment in the fervent hope that your Majesty may, as I am doing, give thought in this definite emergency to ways of dispelling the dark clouds. I am confident that both of us, for the sake of the peoples not only of our own great countries, but for the sake of humanity in neighboring territories, have a sacred duty to restore traditional amity and prevent further death and destruction in the world.

May God have your Majesty in his safe and holy keeping. Your good friend,
Franklin Delano Roosevelt."

"BROTHER GOT A DIME FOR ME..."

You certainly know that song of 1920. In those days Ex-Servicemen were selling apples in the streets! Veterans were forced to organize a "hunger march" to Washington to get their bonus which the politicians had promised to them for twenty years. Well, all that happened after the "great victory" of 1918. Was it a "great victory" for the "man-in-the-street", the farmer or the Ex-Serviceman?

NO, CERTAINLY NOT!

He was good enough to risk his life a thousand times, but

AFTER THE WAR HE WAS FORGOTTEN.

When the great plants of the war industry closed on the morning after the armistice, the ex-soldier faced unemployment and misery for many years.

WHAT WILL BECOME OF YOU AFTER THIS WAR?

The very same thing will happen again. Every war in history was followed by a great depression and widespread unemployment. Do not be a fool and believe the bombastic talk emanating from busy propaganda offices in Washington about "everlasting peace and prosperity" after this war. Get this through your head: There is only one class of people profiting from any war: **Wallstreet and the Jews!** They want you to fight because your blood will bring fat dividends to the moneyed gang in Wallstreet. For their profit you are expected to give your life or to return some day as a cripple, only to

SELL APPLES AGAIN!

lumps, loaded with their pitiful little bundles. How many tears must be shed at leaving home and home. Is no mercy to be shown to us human beings?

The last fortnight has been a nerve-shattering trial for us, and however we steel our hills we can't stave off anything. All I know is that the Führer needs men - men like you, Paul, for example. Men who are ready to live, and also to die, for their ideas. What's going on here is so contemptible and cowardly that I'm seething with rage! You can't imagine how the women are quaking with fear for their menfolk in the Party - not to speak of the men themselves! What sort of people are they? Can you tell me? - Party members who, once they have been put to a little bit of testing, go off and destroy their uniforms, badges and all documents?

The fact that the pictures of the Führer are the first things to be destroyed is just one additional sad fact. Things have come to such a pass that one can't think ill of the soldiers at the front, who've been in the war for five years, if they wish for a speedy end to it.

Until now I respected any man who defended his ideas and views, but a man who at this time simply clings to his little bit of life and at once becomes a turncoat - he's a scoundrel.

I wish merciful fate would put an end to this life. It will never be anything but fighting. And what for? Our future is so uncertain. Nothing anywhere is worth striving for.

Love and kisses,

Eternally yours

Rita.

Aux habitants d'Alsace, de Lorraine
et du Grand Duché de Luxembourg

LA BATAILLE S'APPROCHE DE VOUS!

L'ÉLIMINATION de la 7ème Armée Allemande, en tant que force combattante à l'ouest de la bataille de France. Les survivants de la bataille de Normandie, ainsi que les quelques divisions qui se trouvent encore au nord de la Seine, peuvent tout au plus entreprendre une série d'opérations de retardement, tandis qu'ils se replient vers l'Allemagne. Par conséquent, les secteurs dans lesquels vous habitez ne trouvent déjà ni arrière des zones d'opérations militaires. Ils peuvent, d'un moment à l'autre, devenir le théâtre de nouveaux combats. En raison de ces faits, les instructions suivantes ont été publiées par le Commandement Suprême des Forces Expéditionnaires Interalliées.

LES LIGNES DE COMMUNI- CATION SERONT SOUMISES A DES BOMBARDEMENTS :

SI LES ALLEMANDS ESSAYENT DE VOUS CONTRAINDRE A EXECUTER DES TRAVAUX :

S'ILS COMMETTENT DE NOUVEAUX CRIMES ET DE NOUVELLES ATROCITES :

1. Les lignes aériennes de communication de l'armée allemande en retraite vers l'Allemagne seront soumises à des bombardements aériens. Les survivants de la bataille de Normandie, ainsi que les quelques divisions qui se trouvent encore au nord de la Seine, peuvent tout au plus entreprendre une série d'opérations de retardement, tandis qu'ils se replient vers l'Allemagne. Par conséquent, les secteurs dans lesquels vous habitez ne trouvent déjà ni arrière des zones d'opérations militaires. Ils peuvent, d'un moment à l'autre, devenir le théâtre de nouveaux combats. En raison de ces faits, les instructions suivantes ont été publiées par le Commandement Suprême des Forces Expéditionnaires Interalliées.
2. Les Allemands vont peut-être essayer de vous contraindre à exécuter des travaux de fortification et de construction. Les travaux de fortification seront particulièrement exposés aux attaques aériennes. En conséquence, dans le cas où l'ennemi essaierait de vous contraindre à exécuter des travaux de fortification et de construction, vous devez vous en garder et vous devez vous en garder.
3. Les populations d'Alsace, de Lorraine et du Grand Duché de Luxembourg sont en outre averties que les Allemands, dans leur fuite désespérée, peuvent commettre de nouveaux crimes et de nouvelles atrocités. Ceux qui s'en rendent coupables seront traduits devant la justice. Vous êtes priés de garder à l'esprit que le plus grand mal, les circonstances dans lesquelles les crimes et les atrocités sont commis. Vous êtes priés de garder à l'esprit que le plus grand mal, les circonstances dans lesquelles les crimes et les atrocités sont commis.

DEUTSCHLANDS ZUKUNFT
 Roosevelt erläutert die Beschlüsse der Krim-Konferenz.

Die wichtigsten Erklärungen über Deutschlands Zukunft stammen von dem Beside der Präsidenten Roosevelt und Winston Churchill, die am 1. März 1945 in der Konferenz der Großen in Jalta getroffen wurden.

Wir werden in unserer Ansprache nicht ohne Augenblick nachzudenken bei der bedingungslosen Kapitulation des Gegners. Das deutsche Volk und die deutschen Soldaten wissen sich darüber klar zu sein, dass die Waffen strecken — alles in Gruppen oder als Einzelne, denn es wird keine gegenwärtigen Leiden, vorüber sein. Und weiter muss sich das deutsche Volk darüber klar sein. Nur durch restlose Kapitulation kann es den Anfang damit machen, wieder ein Volk zu werden, das die Welt als positiver Nachbar anerkennt. Wir haben in Jalta eindeutig ausgesprochen, und ich wiederhole es jetzt noch einmal:

Bedingungslose Kapitulation bedeutet nicht die Vernichtung oder Verdrängung des deutschen Volkes.

Dieser Teil der Jalta-Erklärung hat die nationalsozialistische Führung des deutschen Volk in Panik und Ratlosigkeit gebracht. Die Nationalsozialisten haben versucht, das deutsche Volk zu täuschen, die Jalta-Erklärung bedeutete Verdrängung und Vernichtung des deutschen Volkes. Dem ist ohne Weiteres zu widersprechen. Die Jalta-Erklärung hat die deutsche Nation in die Lage versetzt, sich zu entscheiden, ob sie das deutsche Volk zu vernichten, zu verdrängen und zu verdrängen.

Roosevelt über die Bedeutung des Begriffs „Bedingungslose Kapitulation“.

„Ich will es heute mit der Jalta-Konferenz zusammenfassen, was bedingungslose Kapitulation für Deutschland bedeutet. Kapitulation bedeutet: Zuerst die Überwindung Deutschlands durch Großbritannien, Russland, Frankreich und die Vereinigten Staaten. Eine künftige Kommission, bestehend aus den Vertretern der vier Mächte mit dem Ziel zu Berlin, wird die Verdrängung der vier Besatzungs-Zonen beschließen.“

Bedingungslose Kapitulation bedeutet ferner das Ende des Nationalsozialismus und der NSDAP mit all ihren barbarischen Gezeiten und Einrichtungen. Bedingungslose Kapitulation bedeutet das Ende aller militärischen Einrichtungen im öffentlichen, privaten und kulturellen Leben Deutschlands.

Für die deutschen Bevölkerung bedeutet bedingungslose Kapitulation schnelle, gerechte und regelmäßige Beendigung. Kapitulation bedeutet auch die völlige Befreiung Deutschlands, die vollständige Beendigung des deutschen Militarismus, die Verdrängung aller deutschen Kriegergeiseln, das Ende der deutschen Besatzungsmächte, die Demobilisierung aller deutschen Wehrkräfte und die vollständige Auflösung des deutschen Generalstabes, der so oft die Feinde der Welt erschreckt hat. Dies sind die wichtigsten Schritte, die Deutschland in der nächsten Zeit zu tun hat. Die deutsche Bevölkerung muss sich dieser Schritte bewusst sein. Wir wollen nicht, dass die deutsche Bevölkerung in der nächsten Zeit in der Lage ist, die Jalta-Erklärung zu verstehen. Wir wollen, dass die deutsche Bevölkerung die Jalta-Erklärung versteht. Wir wollen, dass die deutsche Bevölkerung die Jalta-Erklärung versteht.

Roosevelt über die Aufrechterhaltung des Weltfriedens.

„Die Krim-Konferenz war eine erfolgreiche Aktion der drei führenden Nationen, um eine gemeinsame Basis für den Frieden zu schaffen. Sie bedeutet das Ende der Systeme der unversöhnlichen Aggression, der exklusiven Bündnisse, der Interessengruppen, der Überlegenheitskomplexe und anderer ähnlicher Experimente, die in den letzten Jahrhunderten versucht wurden — und gescheitert sind.“

Wir beschließen, dass unser System eine Weltordnung sein soll, in der alle Nationen, die friedliebend sind, friedliebend zusammenkommen können. Ich bin überzeugt, dass der Kongress und das amerikanische Volk die Ergebnisse der Konferenz gutheißen werden, und eine Basis für den Frieden, auf der wir weiter aufbauen können, wird durch diese Konferenz geschaffen. Die Welt der Zukunft, in der unsere Kinder und Enkelkinder leben werden, ist eine Welt, in der alle Nationen, die friedliebend sind, friedliebend zusammenkommen können. Wir wollen, dass die deutsche Bevölkerung die Jalta-Erklärung versteht.

Der Herr Präsident Roosevelt wurde von amerikanischen Kongressmitgliedern begrüßt und umarmt.

THE FUTURE OF GERMANY
 Roosevelt discusses the Crimea Conference Decisions

The following statements about the future of Germany are from the press release by President Roosevelt to the American Congress on March 1, 1945. In this report he discussed the decisions reached jointly by the United States, Great Britain and the Soviet Union at the Yalta Conference.

“We will not settle for any moment until unconditional surrender. The German people, as well as the German soldiers, must realize that the moment they give up and surrender, no group or individual, no matter how small, will be spared. They must realize that only with complete surrender can they begin to rebuild themselves as people whom the world might accept as decent neighbors. We stand in clear again at Yalta, and I now repeat:”

Unconditional surrender does not mean the destruction or enslavement of the German people.

“The Nazi leaders have deliberately withheld that part of the Yalta declaration from the German people and radio. They work to convince the people of Germany that the Yalta declaration does mean slavery and domination for them, for that is how the Nazis hope to save their own skins and deceive their people into continued passive resistance.”

Roosevelt on the meaning of the term “Unconditional Surrender.”

“We did, however, make it clear at this conference just what unconditional surrender does mean for Germany. It means the temporary control of Germany by Great Britain, Russia, France and the United States. Each of these nations will occupy and control a separate zone of Germany — and the administration of the four zones will be coordinated in Berlin by a control council composed of representatives of the four nations.”

Moreover, unconditional surrender means the end of National Socialism and the Nazi Party with all its barbaric laws and institutions. Unconditional surrender means the

end of all military influence in the public, private and cultural life of Germany.

“For the Nazi war criminals, unconditional surrender means quick, just and severe punishment. Capitalism means the complete disarmament of Germany, the final extermination of German militarism, the destruction of all German war material, the end of German war industry, the demobilization of all German armed forces, and the absolute destruction of the German General Staff which has so often deceived the peace of the world. For the damage which has been done, Germany will have to make reparations in kind — by surrendering plants and machinery, rolling stock and raw materials.”

“We will not, as after the last war, count the cost of demanding reparations in the form of money which Germany could never pay. We do not want the German people to starve, or to become a burden on the rest of the world. Our objective in handling Germany is simple — it is to secure peace of the future world.”

Roosevelt on the maintenance of world peace.

“The Crimea Conference was a successful effort by the three leading nations to find a common ground for peace. It opens the end of the system of unilateral action and exclusive alliances and spheres of influence and balances of power and all the other superstitions which have been tried for centuries — and have failed.”

“We propose an organization for all these universal organizations in which all peace-loving nations will rapidly come to join. I am confident that the Congress and the American people will accept the results of this conference as the beginning of a new era of peace and justice upon which we can begin to build, under God, the peace world in which our children and grandchildren — yours and mine, the children and grandchildren of the whole world — shall live.”

The United States Congress by an overwhelming majority of votes approved and accepted President Roosevelt's report.

ALLIIERTES OBERKOMMANDO

(Supreme Headquarters, Allied Expeditionary Force)

BEFEHL

AN DIE VERSPRENGTEN DEUTSCHEN TRUPPENTEILE

Das schnelle Vordringen der Alliierten hat es mit sich gebracht, dass zahlreiche deutsche Einheiten versprengt und aufgelöst worden sind und daher von zuständiger deutscher Seite keine Befehle mehr erhalten können.

Um nutzlose Opfer an Menschenleben zu vermeiden, ergeht daher folgender Befehl:

- 1.) Deutsche Soldaten, die abgeschnitten oder versprengt wurden, sowie Einheiten, die vom deutschen Kommando keine Befehle mehr erhalten, haben sich beim nächstliegenden alliierten Truppenteil zu melden.
- 2.) Bis dahin ist der Einheitsführer bzw. rangälteste Unteroffizier für die Disziplin seiner Mannschaft verantwortlich. Die umstehenden Verhaltensmassregeln für versprengte Einheiten treten mit sofortiger Wirksamkeit in Kraft.

DWIGHT D. EISENHOWER

Oberbefehlshaber der Alliierten Streitkräfte

An die überlebenden **Soldaten und Offiziere der** **7. Armee!**

Alliierte Panzer stehen jetzt hinter Euch. Während Ihr gegen die überwältigende Übermacht an Soldaten, Panzern, Artillerie und Flugzeugen gekämpft habt, haben alliierte Panzerkolonnen Eure Flanke umgangen :

Argentan, der Verkehrsknotenpunkt hinter Euch, ist in alliierten Händen. Der Grossangriff auf Eure rückwärtigen Verbindungen hat nunmehr begonnen.

WAS IST ZU TUN ?

Rückzug wäre daher unvermeidlich — aber Ihr habt keine Rückzugslinien. 6 000 alliierte Flugzeuge belegen die schmale Rückzugspforte hinter Euch mit Bomben, Bordwaffen und Raketen. Jeder Rückzug über diese Strassen bedeutet Rückzug ins Verderben.

Euch wird von den Kriegsverlängerern befohlen werden, den selbstmörderischen Kampf fortzusetzen — weiterzukämpfen ohne Luftunterstützung, ohne Reserven, ohne zureichende Transportmittel, ohne Hoffnung.

NUR EINE RETTUNG :

DIESES FLUGBLATT GIBT EUCH GELEGENHEIT, EUER
LEBEN FÜR DEUTSCHLAND ZU ERHALTEN. JEDER
VON EUCH MUSS FÜR SICH SELBST ENTSCHEIDEN. JE
FRÜHER IHR EUCH ENTSCHEIDET, ZURÜCKZUBLEIBEN,
DESTO WAHRSCHEINLICHER IST ES, DASS IHR DEN FRIE-
DEN NOCH ERLEBT.

[back](#)

To the surviving
officers and men of the
7th Army

Allied tanks now stand *behind you*. While you have fought against an overwhelming superiority of men, tanks, artillery and aircraft, Allied tank columns swept around you :

Argentan, the communications hub in your rear, is in Allied hands. The big attack on your rear has now begun.

WHAT IS TO BE DONE ?

Retreat, therefore, is unavoidable — but you have no lines of retreat. 6,000 Allied planes are pounding the narrow escape gap behind you with bombs, machine-guns and rockets. Any retreat over those roads is a retreat into disaster.

You will be ordered by the war-prolongers, to continue the suicidal fight — to go on fighting without air support, without reserves, without sufficient transport, without hope.

ONLY ONE WAY OUT:

THIS LEAFLET GIVES YOU AN OPPORTUNITY TO SAVE
YOUR LIVES FOR GERMANY. EVERYONE OF YOU MUST
DECIDE FOR HIMSELF. THE SOONER YOU DECIDE TO
STAY BACK, THE MORE PROBABLE IT IS THAT YOU WILL
LIVE TO SEE THE PEACE.

СМЕЛЫМ ЛЁТЧИКАМ РЕАКТИВНЫХ САМОЛЁТОВ

20 апреля 1953 года

ПУТЬ К СВОБОДЕ

Товарищи лётчики! Дальневосточное Командование предлагает свою помощь всем смелым лётчикам, желающим освободиться от коммунистического ига и начать новую, лучшую жизнь, с должным почётом в свободном мире.

Дальневосточное Командование гарантирует вам убежище, защиту, человеческую заботу и внимание. Вам дана полная гарантия в том, что ваши имена останутся в тайне, если вы того пожелаете.

Товарищи лётчики! Ваш смелый шаг приведёт вас к свободе и даст вам возможность жить в дальнейшем без страха за своё благополучие. По мимо этого, своим героизмом и решительностью вы поможете другим, указав им путь к свободе.

Дальневосточное Командование вознаградит суммой в 50,000 американских долларов каждого лётчика, который приведёт к посадке в Южной Корее современный реактивный самолёт в боевой готовности. Первый лётчик совершивший посадку на таком самолёте получит в награду добавочную сумму в 50,000 американских долларов за свою смелость.

Ниже даны инструкции всем лётчикам желающим освободиться от коммунистического ига.

Летите к острову Хакурейто (о. Пенген-то), который находится в 50 километрах к югу от острова Чото. От Хакурейто (о. Пенген-то) направляйтесь к авиабазе Кимпо, всё время находясь на высоте 6100 метров. Начинайте спускаться над авиабазой Кимпо и готовьтесь к немедленной посадке. Самолёты ОН будут охранять вас всё время летя над хвостом вашего самолёта. Если плохая видимость не позволит вам самостоятельно совершить посадку на авиабазе Кимпо, то направляйтесь к Сеульскому району, и находясь на высоте 6100 метров спустите посадочные колёса. Один из самолётов ОН подлетит вплотную к вашему и летя рядом приведёт вас к безопасному месту посадки. При первом-же контакте с самолётом ОН, или в случае попытки одного из самолётов ОН атаковать вас, моментально спустите посадочные колёса и начните с силой качать крыльями вашего самолёта.

Свободный мир ждёт вашего прибытия.

МАРК В. КЛАРК
Генерал Армии США
Главкомандующий Вооружёнными Силами
на Дальнем Востоке.

FOREWORD

It has been said that the future can only be approached clearly and wisely if the path leading to the present is known. In assessing national security policy choices, decisionmakers often do not have available the clarifying perspective provided by history. Recognizing this problem, the National Defense University has encouraged selected history-oriented research to complement our other topical publications on national security issues. This first volume in our new Military History Series is by Colonel Alfred H. Paddock, Jr., USA, on the origins of the US Army's special warfare capability.

As the most senior of our military services, the Army has undergone many organizational and doctrinal changes since its inception as a small militia force in 1775. But the year 1945 marked the beginning of an era of dramatic change. The new global realities of the post-World War II period suggested the need for an Army able to respond to a spectrum of conflicts. This led to the building of a "special warfare" capability encompassing psychological and unconventional warfare as a response to military challenges at the lower end of the conflict spectrum.

Colonel Paddock traces the origins of Army special warfare from 1941 to 1952, the year the Army's special warfare center was established. While the Army had experience in psychological warfare, the major recent US experience in unconventional warfare had been in the Office of Strategic Services, a civilian agency, during World War II. Many Army leaders, trained and experienced in conventional warfare, hesitantly accepted psychological warfare as a legitimate weapon in the Army's wartime arsenal, but questioned the validity and appropriateness of the Army's adoption of unconventional operations. The continuing tensions of the cold war and hostilities in Korea resolved the ambivalence in favor of coordinating in a single operation the techniques of both types of warfare.

x **FOREWORD**

Colonel Paddock's extensively documented work traces a portion of a brief episode in our Nation's military history, but an instructive one. For the historian and military scholar, it provides the necessary backdrop for understanding the subsequent evolution of the Army's special warfare capability. For the national security policymaker, it suggests the value of the innovative impulse and the need for receptivity to new ideas and adaptability to change.

Thus, this new NDU Press Military History Series will aid us look forward to effect change by reminding us of the lessons of past military efforts.

JOHN S. PUSTAY
Lieutenant General, USAF
President

PREFACE

The original intent of this study was to analyze how the US Army, which was developed to fight conventional wars, attempted to cope with the demands of low-intensity warfare after World War II. The primary focus for the investigation was to be the evolution of the Army's John F. Kennedy Center for Military Assistance at Fort Bragg, North Carolina, from its inception in the early 1950's through the Vietnam years. I still intend, as a future project, to accomplish that original goal. My preliminary research, however, revealed that the story of how and why the Army decided to undertake such a quest in the first place has not been adequately told. This study is intended to fill that void in our military history. Specifically, it examines the Army's activities in psychological and unconventional warfare during and after World War II to determine the impetus for, and origins of, the formal "special warfare" capability created in 1952 with the establishment of the Psychological Warfare Center (later the Center for Military Assistance). An understanding of these historical roots should provide a more enlightened perspective from which to assess the subsequent evolution of "special warfare" in the Army.

I am indebted to Professor I. B. Holley of Duke University for first suggesting this topic and for his constructive advice. The comments and insights provided on the outline and manuscript by my mentor, Professor Theodore Ropp of Duke, were invaluable. The long talks with Professor John K. Mahon, University of Florida, during his year with the US Army Military History Institute, were most appreciated, as were the comments on the manuscript by Professor Harold Deutsch of the Army War College faculty. For their expert, willing assistance during my research, I am particularly indebted to William Cunliffe and Ed Reese of the National Archives, Miss Hannah Zeidlik of the US Army Center of Military History, Miss Joyce Eakin and Dr. Richard Sommers of the Military History Institute, and Mrs. Beverly Lindsey of the John F. Kennedy Center for Military Assistance. My sincere gratitude goes to my wife, Theresa, for her

xii PREFACE

patience, initiative, and thoroughly professional typing of the manuscript. Paul Taborn, The Adjutant General's Office, Department of the Army, was most understanding and helpful in the interagency processing of my personal notes, documents from the National Archives, and the final manuscript. Timely completion of the study would not have been possible without the encouragement, assistance, and scholarly environment provided by the Army War College and Strategic Studies Institute.

Finally, this study is dedicated to my wife and three children, who know better than anyone the sacrifices it required.

A. H. P., JR.

THE AUTHOR

Colonel Alfred H. Paddock, Jr, was born 11 February 1937 in Moscow, Idaho; enlisted in the US Army in September 1957; and was commissioned through the Infantry Officer Candidate School in September 1958. He earned his B.A. degree in political science from Park College, and holds M.A. and Ph.D. degrees in history from Duke University. Colonel Paddock is a graduate of the US Army Command and General Staff College and the US Army War College.

His military career has included command and staff assignments in Korea, Laos, Okinawa, Vietnam, and the United States. He served three combat tours with Special Forces units in Southeast Asia. He was an instructor in strategy and strategic studies at the Command and General Staff College, Fort Leavenworth, Kansas; served in the Politico-Military Division of the Department of the Army Staff in Washington, DC; commanded the 6th Psychological Operations Battalion at Fort Bragg, North Carolina; was both a faculty instructor for the Department of National and International Security Studies and a Strategic Research Analyst, Strategic Studies Institute, at the US Army War College, Carlisle Barracks, Pennsylvania; and commanded the 4th Psychological Operations Group, Fort Bragg, North Carolina, from November 1979 to May 1982.

Colonel Paddock is the author of "Does the Army Have a Future? Deterrence and Civil-Military Relations in the Post-Vietnam Era" which appeared in the September 1978 issue of *Parameters*. He was a co-author of *Organization, Missions and Command and Control of Special Forces and Ranger Units in the 1980's*, published by the Strategic Studies Institute in April 1979.

Colonel Paddock is Chairman, Department of National and International Security Studies, US Army War College, Carlisle Barracks, Pennsylvania.

I

INTRODUCTION

In the first half of the twentieth century, American leaders employed US Armed Forces to support American foreign policy in "conventional warfare" against the organized, uniformed forces of enemy nations. Although the size and nature of the forces varied in two world wars and Korea, in each of these conflicts the US Army performed its role with regularly organized divisions and without the use of nuclear weapons. Whether infantry, mechanized infantry, armored, or airborne, the division was the basic formation of the Army, the key organization by which strength was measured in conventional war. After World War II, political and military leaders began to consider other forms of conflict in which US forces might be engaged. Organization, equipment, and doctrine were reexamined in view of the possibility of nuclear war, but in this process the division remained a fundamental military organization. Simultaneously, however, a few thinkers began to consider the possibility of forces capable of operating at the opposite end of the conflict spectrum from nuclear war, below the level of conventional war—to consider, in short, a capability to conduct guerrilla, or "unconventional" warfare. Regular divisions were never designed or equipped for unconventional warfare, so special units, training, and doctrine would be necessary for such a task.

In 1952 the Army created the first formal unconventional warfare force in its history, the 10th Special Forces Group, assigned to the Psychological Warfare Center, an institution created that same year at Fort Bragg, North Carolina. From that year to the present, this institution, known consecutively as the Psychological Warfare Center, the Special Warfare Center (1956), and finally the John F. Kennedy Center for Military Assistance (1969), has constituted the headquarters for Army "special warfare."

2 INTRODUCTION

Secretary of the Army Elvis J. Stahr, Jr., defined "special warfare" in 1962 as "a term used by the Army to embrace all military and paramilitary measures and activities related to unconventional warfare, counterinsurgency, and psychological warfare."¹ *Unconventional warfare* primarily encompassed guerrilla operations and subversion to be carried out within enemy or enemy-controlled territory by indigenous personnel, supported and directed by US forces. *Counterinsurgency*, on the other hand, included all actions, military and political, taken by the forces of the United States alone or in conjunction with a legal government to *prevent or eliminate* subversive insurgency. *Psychological warfare* encompassed those activities planned and conducted to influence the opinions, emotions, attitudes, and behavior of the enemy, the indigenous population, and neutral or friendly foreign groups to help support US objectives.² Unconventional warfare, counterinsurgency, and psychological warfare, then, comprised the key elements of special warfare, which according to Secretary Stahr included the capability to fight "as guerrillas as well as *against* guerrillas and also involves the employment of psychological devices to undermine the enemy's will to resist."³

Secretary Stahr's words came from the early 1960's when special warfare, then symbolized by the Special Forces "Green Berets," enjoyed its zenith under the Kennedy administration. During the next decade, the goals of special warfare changed somewhat in form and emphasis, and the concept receded in importance within the Army. The special warfare historian might be excused for noting that that more recent period is reminiscent of the 1950's, when the idea of special warfare struggled for survival. The story of special warfare, then, is a story of the Army, hesitantly and reluctantly groping with concepts of an "unconventional" nature.

To understand the evolution of special warfare, particularly its embryonic existence in the early 1950's, one must grapple with the questions of how and why it all began. An examination of the original organization of the Psychological Warfare Center in 1952 reveals that its major subordinate elements—the Psychological Warfare School (divided into psychological operations and special forces instructional departments), the 6th Radio Broadcasting and Leaflet Group, and the 10th Special Forces Group—all involved two of the three components of special warfare; that is, psychological and unconventional warfare.⁴ The third component, counterinsurgency, appeared later with US involvement in Southeast Asia. In addition, the 1952 organization of the Fort Bragg center seemed to favor psychological warfare over unconventional warfare; after all, it was the *Psychological Warfare Center* and the *Psychological Warfare School*.

The apparent dominance of psychological warfare was also evident in the official unclassified literature of the day, particularly the semiannual Department of Defense reports for 1952. The 1 January-30 June 1952 report, for example, although highlighting the establishment of the Psychological Warfare Center, made no mention of the concomitant creation of the 10th Special Forces Group, the first unit of its type in Army history.⁵

Why, in 1952, did the Army decide, for the first time in its history, to begin a special warfare capability by establishing the Psychological Warfare Center at Fort Bragg? What were the roots of psychological and unconventional warfare in US Army experience, and why were these concepts physically embodied in the same location in 1952? Finally, why did psychological warfare achieve ascendance over unconventional warfare? Answers to these questions lie in the history of psychological and unconventional warfare from World War II to creation of the Psychological Warfare Center in 1952.

II

PSYCHOLOGICAL WARFARE IN WORLD WAR II

With the outbreak of World War II, the United States had virtually no organized capability to conduct psychological and unconventional warfare. That situation changed on 11 July 1941, when President Franklin D. Roosevelt established the Office of Coordinator of Information (COI) and designated Colonel William J. Donovan as the first director. Thus was begun a bold idea: through COI and its successor, the Office of Strategic Services (OSS), the United States began "its first organized venture into the fields of espionage, propaganda, subversion and related activities under the aegis of a centralized intelligence agency."¹

The Coordinator of Information

Ironically, the creation of COI came largely from recommendations following Colonel Donovan's fact-finding trips to the Middle East and Great Britain. He had been impressed by the British method of combining—in agencies called the Political Warfare Executive and Special Operations Executive—propaganda efforts with the "unorthodox" operations of sabotage, subversion, and guerrilla warfare. He had been impressed as well by the British system of intelligence and counter-intelligence, as conducted by their Secret Intelligence Service, and by their ability to coordinate intelligence activities with psychological warfare and special operations. Donovan thus proposed to Roosevelt the creation of a single agency to centralize the intelligence gathered by several uncoordinated offices in Washington, combining the functions of psychological warfare and special operations on the British model.² According to Corey Ford, Donovan's biographer, the President welcomed "the sug-

6 PSYCHOLOGICAL WARFARE IN WORLD WAR II

gestion of a single agency which would serve as a clearinghouse for all intelligence, as well as an organ of counterpropaganda and a training center for what were euphemistically called 'special operations.'"³

As often happens to those who recommend measures of a far-reaching nature, Donovan was "invited" by the President to head the agency that he had proposed.⁴ Initially COI contained two major divisions, Research and Analysis (R&A) and the Foreign Information Service (FIS), plus secret intelligence and sabotage branches for training. Dr. William L. Langer, a Harvard historian, became director of R&A, the division designed to evaluate all incoming intelligence. Robert E. Sherwood, a playwright and confidant of President Roosevelt, became head of FIS, the psychological warfare division. As William F. Daugherty has written, FIS "undertook to spread the gospel of democracy . . . and to explain the objectives of the United States throughout the world except in Latin America."⁵ To carry out these aims, FIS used information from the wire services as propaganda on its 11 commercial shortwave stations, which transmitted in several languages. After Pearl Harbor, Sherwood's organization broadcast more than 300, 15-minute programs a week in Europe and Asia.⁶

Donovan's concept of psychological warfare was all-encompassing. The first stage would be "intelligence penetration," with the results, processed by R&A, available for strategic planning and propaganda. Donovan called propaganda the "arrow of initial penetration" and believed that it would be the first phase in operations against an enemy. The next phase would be special operations, in the form of sabotage and subversion, followed by commando-like raids, guerrilla actions, and behind-the-lines resistance movements. All of this represented the softening-up process prior to invasion by friendly armed forces. Donovan's visionary dream was to unify these functions in support of conventional unit operations, thereby forging "a new instrument of war."⁷

To carry out this concept, Donovan believed that COI should become a supporting agency for the Joint Chiefs of Staff (JCS) once JCS had been created in February 1942. The military services' de facto control over personnel and materiel made it necessary, he believed, to place COI under JCS authority. He realized pragmatically that the COI could not carry out secret activities without the concurrence and support of theater commanders, and that those commanders also must coordinate any such secret activities with conventional military operations. For several months he argued with Roosevelt for COI to be brought under the JCS, and for FIS foreign propaganda to be more closely coordinated with the intelligence activities of the military services.⁸ But his arguments were unsuccessful.

OSS and OWI

Donovan's comprehensive concept of psychological warfare was not shared by everyone. On 11 June 1942, less than a year after COI's creation, President Roosevelt ordered that FIS be transferred to the newly established Office of War Information (OWI). By the same Executive order, Roosevelt also dissolved COI and supplanted it with a new organization, the Office of Strategic Services, with Donovan continuing as its head.⁹ The change, however, did put OSS under JCS authority, as recommended by Donovan on 8 June.¹⁰ In effect, as Edward Hymoff succinctly states, "COI became OSS and FIS became a division of the Office of War Information."¹¹

Roosevelt's decision to reorganize the psychological warfare effort was apparently motivated by several factors. First, the increasing number of Government information agencies had created problems of overall coordination, and a need existed to consolidate wartime information and psychological warfare activities.¹² There was also growing recognition that COI had become unwieldy, and the President preferred that US wartime propaganda be separated from, rather than combined with, strategic intelligence and subversive operations.¹³ Then there was the problem of personalities. Donovan and Sherwood, Chief FIS, had different views on the role of FIS as a part of COI. According to Corey Ford, "Colonel Donovan believed that, once a state of war existed, the propaganda arm should be exploited as a weapon of deception and subversion, and should be under military supervision," while Sherwood "held that propaganda broadcasts should stick scrupulously to the facts, and let the truth eventually prevail." Sherwood believed that "the American image overseas would suffer . . . if we emulated Axis methods and resorted to lies and deceit." He also believed that FIS should remain under civilian direction, and he clashed with Donovan over his proposals to put COI and FIS under JCS jurisdiction. These differing views were hardening into personal animosity between the two men; since both Donovan and Sherwood had the respect of the President, Roosevelt evidently felt that it would be wise to separate their responsibilities.¹⁴ Perhaps the most important factor, however, was the opposition of Harold D. Smith, Director of the Budget. Smith submitted a memorandum to the President on 7 March 1942, proposing a reorganization of war information services that resulted in the formation of OWI.¹⁵ Thus, for many reasons, the President shifted the major responsibilities for psychological warfare to the newly created OWI.

The creation of OWI, however, neither solved the problems of coordination nor delimited responsibilities for psychological warfare, even with a

8 PSYCHOLOGICAL WARFARE IN WORLD WAR II

highly respected Columbia Broadcasting System reporter like Elmer Davis as its first director. Although most existing information services were transferred to OWI, Donovan's agency continued to keep its fingers in the propaganda pie. Having lost the battle to keep FIS under his direction in COI, Donovan continued to assume some psychological warfare functions for OSS.

Eventually the lines of responsibility were more clearly drawn and accepted by the two agencies. In addition to its intelligence and special operations activities, OSS retained responsibility for "black" propaganda operations, which were essentially covert activities using information issued from a concealed or falsified source to lower the enemy's morale.¹⁶ OWI, on the other hand, controlled all propaganda in the United States and all "white" propaganda—information, official or otherwise, plainly issued from a known source—outside the United States with the exception of the Western Hemisphere; that remained a responsibility of the Office of Coordinator of Inter-American Affairs (CIAA) in the State Department.¹⁷ In March 1943, another Executive order more clearly identified OWI's responsibilities for conducting foreign information and overt propaganda operations, and also decreed that its activities be coordinated with plans of the military services.¹⁸

The Army's Psychological Warfare Branch

When the European war broke out, the Army, like other agencies, was ill prepared to understand psychological warfare, much less plan for and conduct it. During World War I, the Army had given psychological warfare token recognition by establishing the Psychological Warfare Sub-Section of G-2 in the War Department, and the Propaganda Section, G-2, General Headquarters (GHQ), American Expeditionary Forces. However, from 1918 to 1941 no psychological warfare office existed at the War Department. The lessons of experience were lost, and by 1941 only one officer on the War Department staff had had psychological warfare experience in the previous war. He was Colonel Charles H. Mason who, as Chief of the Intelligence Branch, Military Intelligence Division (MID) from November 1940 to July 1941, had tried to reestablish a branch for psychological warfare planning and operations. His attempts failed, however, and Mason "complained that his efforts were met with indifference and opposition within the War Department."¹⁹

The first positive steps toward creation of a psychological warfare capability were a result of the personal interest of John McCloy, who had

recently been appointed Assistant Secretary of War. Influenced by the effectiveness of German propaganda, he suggested in June 1941 that a special study group be organized by Brigadier General Sherman Miles, Acting Assistant Chief of Staff, G-2, to plan for future psychological warfare operations.²⁰ McCloy's action illustrates a theme that recurs at critical points throughout the history of special warfare—important governmental civilians intervene to prod hesitant and cautious uniformed Army leaders into taking action on concepts of an "unconventional" nature.

The special group suggested by McCloy was established on 25 June 1941 as the Psychologic Branch, with Lieutenant Colonel Percy Black as its chief. A great deal of secrecy surrounded its creation. Curiously, the only officer with World War I psychological warfare experience, Colonel Mason, was not even informed of its existence. Black's initial study examined all agencies—official and private—engaged in psychological information or propaganda, and concluded that "there was no effort to study the effect of propaganda on various groups, or relate propaganda plans to the plans of the military high command." This embryonic office attempted the following tasks: liaison with the Foreign Monitoring Broadcast Service of the Federal Communications Commission to obtain daily and weekly summaries of foreign broadcasts, completion of surveys for the Office for Coordination of Commercial and Cultural Relations and for the Council for Democracy, initiation of a weekly telegram service to military missions with a brief summary of national defense progress, and purchase of copies of *Newsweek* and *Life* for distribution to selected missions in Europe to counteract the pictorial propaganda of Germany.²¹ These initial efforts by the Army were obviously modest.

To protect its strict security, the Psychologic Branch changed its name to the Special Study Group. An advisory committee of civilian psychologists felt that it was inadvisable to use terms like "propaganda," "control of opinion," and "psychiatry." Thus the name Special Study Group "would be far less revealing than any reference to psychology or propaganda." Later, in March 1942, the name changed to Psychological Warfare Branch, G-2, primarily because the growing number of personnel involved made strict secrecy difficult and because this same secrecy impeded coordination with other offices. Colonel Black was succeeded by Colonel Oscar M. Solbert, who remained chief of the branch until 26 July 1942. His successor was Colonel C. Blakeney, who continued as chief until the branch was dissolved in December 1942.²²

The Special Study Group/Psychological Warfare Branch expanded upon the activities begun under the Psychologic Branch. One of its most important jobs was to produce a daily analysis of Axis propaganda, over 300 issues of which were circulated for guidance to the Office of Facts and Figures, CIAA, the National Broadcasting Corporation, and the Bureau of Public Relations. Since the War Department did not control radio broadcasting, the branch was limited to making suggestions. These ranged from suggested items for use in speeches by the Chief of Staff, to suggested broadcasts containing definite objectives for use by COI. The branch also helped plan leaflet operations in strategic and combat phases, and developed the *Combat Propaganda Bulletin*, a record of lessons learned and recent activities for distribution in Washington and to the military theaters.

In December 1942 the first psychological warfare units were created with the formation of the 1st and 2nd Radio Service Sections. Each section had an authorized strength of 3 officers and 39 enlisted men. Together the two formed the 1st Combat Propaganda Company. When the Psychological Warfare Branch was dissolved on 31 December 1942, the company was transferred from the Military Intelligence Service (MIS) to OSS, then back to MIS on 2 March 1943. At this point, the company was reorganized into combat propaganda teams, equipped with radio transmitters, sound trucks, and language personnel, and then sent to Europe.²³

Concurrently, a draft training manual, *Combat Propaganda Company*, was developed in the autumn of 1942. It was based on an existing pamphlet, *Military Intelligence Propaganda—Confidential*, written by Major P. M. Robinett in December 1940. The manual proved useful in organizing propaganda companies in Europe during 1943-45.²⁴ The activities of the Army's Special Study Group/Psychological Warfare Branch during 1941-42 were varied but certainly not "center stage" at the War Department.

Dissolution of the Psychological Warfare Branch

Dissolution of the Psychological Warfare Branch in December 1942 grew from the problem of defining psychological warfare, a problem that persisted throughout the war, and from interagency battles over responsibilities in this new field. The Joint Chiefs of Staff had created a Joint Psychological Warfare Committee (JPWC) in March 1942 (JCS 12) to plan psychological warfare in combat theaters and enemy-controlled areas.

The committee was reconstituted on 21 June 1942 (JCS 68), after OSS and OWI were established as two separate agencies. Membership was made up of general and flag officers from the Army's G-2, the Office of Naval Intelligence (ONI), the War Department General Staff (WDGS), and the Commander in Chief, US Fleet. Colonel Donovan served as chairman. Established at the same time were a Joint Psychological Warfare Subcommittee, a Supporting Committee on Psychological Warfare within OSS, and a Joint Psychological Warfare Advisory Committee with Donovan as chairman. This last committee was formed to coordinate the psychological warfare activities of agencies outside the jurisdiction of the JCS, such as Nelson Rockefeller's CIAA, Henry Wallace's Board of Economic Warfare, OWI, and the State Department.²⁵

To tackle the problem of defining psychological warfare, a "Basic Estimate of Psychological Warfare" was prepared by the OSS Supporting Committee and approved by the JPWC on 7 September. The fine hand of Donovan is seen in the definition of psychological warfare contained in this Basic Estimate:

[Psychological warfare] is the coordination and use of all means, including moral and physical, by which the end is attained—other than those of recognized military operations, but including the psychological exploitation of the result of those recognized military actions—which tend to destroy the will of the enemy to achieve victory and to damage his political or economic capacity to do so; which tend to deprive the enemy of the support, assistance or sympathy of his allies or associates or of neutrals, or to prevent his acquisition of such support, assistance, or sympathy; or which tend to create, maintain, or increase the will to victory of our own people and allies and to acquire, maintain, or to increase the support, assistance and sympathy of neutrals.

The Basic Estimate further specified that propaganda, subversion, combat propaganda companies, and intelligence secured by research and espionage were the tools needed to carry out this broad concept of psychological warfare.²⁶ The OSS Supporting Committee had spent 6 months trying to develop a salable definition. But the JPWC, after having approved it, did not forward the Basic Estimate to the JCS for approval as a doctrine statement.²⁷

This difficulty of defining psychological warfare was linked to OSS' groping while trying to find its niche as a new agency. The *War Report of the OSS* states the problem: "A contributing factor to the whole situation

12 PSYCHOLOGICAL WARFARE IN WORLD WAR II

was a definite resentment of OSS, as such, which found its strongest expression in Donovan's colleagues on the JPWC. This resentment seemed to be based, in part, upon the fact that OSS was a civilian agency, and, in part, upon the position of OSS as an agency of the JCS and fear that it might encroach upon the functions of G-2 and/or ONI."²⁸ At any rate, the existing psychological warfare committee system proved to be ponderous, confusing, and generally unworkable.

Finally, on 23 December 1942, the JCS issued JCS 155/4D, which abolished the JPWC and made OSS responsible for "planning, developing, coordinating, and executing the military program of psychological warfare" and for "the compilation of such political, psychological, sociological, and economic information as may be required by military operations."²⁹ Concurrent with the reorganization of the JCS psychological warfare machinery, the Army decided to abolish its Psychological Warfare Branch. The decision was announced in Military Intelligence Service Memorandum 147, 31 December 1942, which explained that "since the Office of Strategic Services was responsible for propaganda, there appeared to be no need for the Branch."³⁰

At this point the Army's participation in psychological warfare appeared to be minimal. Such was not the case overseas, however, for JCS 155/4D, which had precipitated the demise of the Army's Psychological Warfare Branch, also gave theater commanders control of psychological warfare in their jurisdictional areas.³¹ In effect, the War Department, as Paul Linebarger states, considered "the theaters in this respect as autonomous, and [left] to the respective Theater Commanders the definition of their relationship with OWI and OSS, and their use of each."³²

Theater Psychological Warfare

Most of the Army's operational work in psychological warfare took place at the theater level, where the responsible organization was normally designated a Psychological Warfare Branch (PWB). The largest of these, the PWB at Allied Forces Headquarters (PWB/AFHQ), was activated in North Africa in November 1942 at the order of General Dwight D. Eisenhower, and then expanded in February 1944 to the Psychological Warfare Division, Supreme Headquarters, Allied Expeditionary Force (PWD/SHAEP).³³ PWD/SHAEP defined psychological warfare as "the dissemination of propaganda designed to undermine the enemy's will to resist, demoralize his forces and sustain the morale of our supporters."³⁴ With

this definition, then, and the overall objective of controlling and coordinating psychological warfare in the area of continental Europe controlled by the Supreme Commander, the specific missions of PWD were the following:

1. To wage psychological warfare against the enemy.
2. To use the various media available to psychological warfare to sustain the morale of the people of friendly nations occupied by the enemy and to cause the people of these countries to acquiesce in the wishes of the Supreme Commander.
3. To conduct so-called consolidation propaganda operations in liberated friendly countries. [Consolidation propaganda was that directed toward a military force and designed to insure compliance with the instructions promulgated by the commander of the occupying force.]
4. To control information services in Allied-occupied Germany.³⁵

To carry out these tasks, PWD used psychological warfare tools such as British Broadcasting Corporation and OWI transmitters, front-line loudspeaker broadcasts, and large-scale leaflet dropping operations. PWD even provided leaflets to be dispersed by the novel method of specially designed artillery shells.³⁶

The basic Army field operating unit for psychological warfare was the Mobile Radio Broadcasting (MRB) Company. Early MRB units had served with the Military Intelligence Service in December 1942 and, after being transferred for a brief period to OSS, went back to the Army in March 1943. The equipment for these units was unlike anything conventional soldiers had seen in the field—public address systems, radios, monitoring sets, loudspeakers, typewriters, mobile printing presses, and leaflet bombs. MRB units were usually divided by the separate Army groups and field armies into small teams, often to work in direct support of frontline conventional combat units. One MRB company commander, Major Edward A. Caskey, described his responsibilities as primarily tactical, or combat, propaganda efforts. His company used short-range radio broadcasts as well as tactical leaflets printed on the spot, then delivered to enemy lines through the use of modified artillery smoke shells. He also maintained prisoner-of-war interrogation teams that worked with G-2. Caskey explained: "Both Germans and Italians (prisoners) stated that the

14 PSYCHOLOGICAL WARFARE IN WORLD WAR II

content of the leaflets had greatly influenced their decision [to surrender]. They all insisted that they were mostly impressed with the veracity of our leaflets."³⁷

Five such companies eventually served under PWD/SHAEF. Although these units were the result of improvisation in 1943 and 1944, the doctrinal and organizational concepts they embodied reappeared in the psychological warfare units formed during the Korean conflict.³⁸

Taken together, then, several diverse organizations in PWD, both civilian and military, somehow had to be fused into a common psychological warfare organization. According to an account prepared by the PWD staff, PWD/SHAEF "was the first agency, military or civilian, to coordinate successfully in Western Europe the efforts of the numerous military and civilian agencies which had waged Anglo-American psychological warfare since the beginning of the war." The chief of PWD, Brigadier General Robert A. McClure, was assisted by four deputies, each representing a civilian agency that contributed personnel to PWD. Two of those agencies were American—OWI and OSS; two were British—the Political Intelligence Department of the Foreign Office and the Ministry of Information. General McClure's name will reappear, for he was to figure prominently in establishing the Psychological Warfare Center at Fort Bragg in 1952.³⁹

Not everyone was enamored with PWD operations. It was, by conventional unit standards, a rather strange collection of personnel, equipment, and activities. A survey report in August 1943 by the Inspector General, Major General Virgil L. Peterson, described the PWB in North Africa (forerunner of PWD/SHAEF) as "a heterogeneous group of some 468 writers, psychologists, economists, linguists, and world travelers," whose efforts "were somewhat lacking in coordination and control, until they were all assembled in one building and placed under command of an American Army officer." General Peterson concluded his report with a compliment, stating that his survey group "was much impressed with the industry and enthusiasm of the people engaged in these psychological warfare activities." But he also added a caveat about the new organization: "The survey group does not feel qualified to arrive at any conclusions regarding their value to the Theater, or the Army as a whole."⁴⁰

Professor Saul K. Padover, a PWD combat intelligence officer, was later to recall that "at first PWD was not much appreciated; hard-bitten regular Army men referred to the psychological warriors as 'feather merchants.'" But Padover noted, as the war progressed, the organization's

effectiveness received more respect from "formerly suspicious commanders," particularly at the tactical level. And at the end, even generals like George Patton were asking for frontline support because "it was definitely recognized that the loudspeakers helped to persuade the enemy to come over with arms in the air."⁴¹

The Propaganda Branch, G-2

The success of the PWB in North Africa provided much of the impetus to reestablish a psychological warfare branch at the War Department. General McClure's deputy, C. D. Jackson, OWI, returned to the United States for a visit in June 1943. During his trip he talked with John J. McCloy, Assistant Secretary of War, who in 1941 had displayed the interest in psychological warfare that led to the creation of the Psychologic Branch. Still deeply interested, Secretary McCloy proceeded to staff papers left with him by Jackson. These papers contained a proposal for a central psychological warfare branch at the War Department to direct and coordinate the work of the theater PWB's.⁴² The seed had been planted.

Prior to this, on 9 March 1943, the continuing difficulty of clearly defining the propaganda responsibilities of OSS and OWI had resulted in Executive Order 9312. That order gave OWI responsibility for planning, developing, and executing all foreign propaganda activities "involving the dissemination of information" (open, or "white," propaganda). This necessitated a revision of JCS 155/4D, which in December 1942 had given OSS responsibility for military propaganda and which had been the major reason for dissolution of the War Department's Psychological Warfare Branch. The revised directive, JCS 155/7D, issued on 4 April 1943, simply omitted any reference to OWI and propaganda.⁴³ Thus a major, albeit largely self-imposed, constraint was lifted, allowing the Army to re-create a psychological warfare branch in Washington.

By August 1943, the papers Jackson had left with Secretary McCloy were beginning to have an impact. In addition to proposing a central psychological warfare branch at the War Department, the papers described the system by which propaganda planning and control were being carried out in the North African theater. In a memorandum to the Secretary to the General Staff, Colonel Otto L. Nelson, Brigadier General J. E. Hull, Acting Assistant Chief of Staff, Operations, and Plans Division (OPD), commented that "although the value of propaganda may not be as great as its proponents claim, it is a recognized instrument of modern war

which can be useful." After this rather ambivalent endorsement, he stated that the principles contained in the PWB North African papers were sound and recommended that they be circulated to theater commanders.⁴⁴ A letter dated 20 August 1943 to all major commanders forwarded the papers "in the event you desire to establish similar agencies." One of the papers, signed by Colonel C. B. Hazeltine, strongly advocated a mixed civilian-military team as "a must for maximum results in a PWB organization."⁴⁵ Yet, it was this civilian influence and interaction that made psychological warfare and unconventional warfare suspect to many conventionally minded Army officers.

Meanwhile, General Peterson's survey report on the PWB in North Africa was now in circulation, and the report contained the complaint from General McClure "that there was no corresponding agency established in the War Department, through which he could channelize his correspondence." Also at about this time, the JCS began to require theaters to submit plans for psychological warfare. Both of these matters were discussed at the 23 August 1943 meeting of the Army's General Council. General McNarney, the Deputy Chief of Staff, recognized the responsibility of OWI "for most of this work," and was not prepared to decide "whether or not the War Department should establish an agency primarily for dealing with these matters or attempt to coordinate by liaison with OWI." Thus he directed the Operations Division and G-2 to "get together and submit recommendations."⁴⁶

The immediate result of this directive was a report to the Joint Intelligence Committee on 8 September 1943 signed by the Assistant Chief of Staff, G-2, and the Assistant Chief of Staff, OPD. The report outlined the agencies primarily responsible for preparing and disseminating foreign propaganda, and concluded that a War Department agency for control of propaganda should be established and have a direct channel through the JCS to the Combined Chiefs of Staff (CCS). Recognizing the Army's deficiencies in this area, the report also noted that "the abolition of the Psychological Warfare Section of G-2 (in December 1942) has seriously reduced the War Department's ability to supply appropriate material to propaganda agencies." Finally, the report included this assessment of the value of psychological warfare:

Although the proponents of psywar are prone to exaggerate its importance, the military value of propaganda in recent operations involving American Forces has been clearly discernible and propaganda has also been used by our enemies with marked success. It is a powerful weapon for influencing men's minds and, therefore, cannot be neglected.⁴⁷

Again we see a lukewarm endorsement of this new field, but an endorsement nevertheless. Momentum had gathered for a new psychological warfare branch in the War Department.

By the middle of October, Major General T. T. Handy, the G-3, and Major General George V. Strong, the G-2, had submitted a more detailed study to General McNarney recommending the establishment of a central authority within the War Department for propaganda plans, policies, and releases. The report was approved by General McNarney and the Secretary of War on 26 October.⁴⁸ The matter appeared to be settled. But neither General Strong nor General Handy wanted the responsibility of the new function. In a memorandum to General Handy on 6 November 1943, General Strong, the G-2, attached a study prepared by G-3 that concluded that the new branch should be in the Operations Division because that division "has the greatest interest in operational propaganda and a direct channel to the Joint and Combined Chiefs of Staff on all operational subjects."⁴⁹ Not to be outdone, General Handy, the G-3, acknowledged on 10 November that G-3 did have an interest in operational propaganda. He suggested that the new branch should be under the G-2's direction because his positions as a member of the Emergency Combined Propaganda Committee and as a Joint Chief of Security Control gave him close touch with War Department coordination and control of propaganda.⁵⁰ The matter was finally resolved by referring to the original recommendations approved by General McNarney on 26 October, which had specified that the new propaganda agency be established in the Military Intelligence Division (G-2).⁵¹

The dialogue between G-2 and G-3 over a new function provides insight into attitudes toward psychological warfare. General staff divisions normally do not avoid or give up a function considered to be important—if it has "high visibility." General Handy's and General Strong's reluctance to accept an activity that was new, difficult to understand, and considered by many officers as a minor side show in the war effort, illustrates a theme that recurs throughout this study—the story of an Army hesitant and reluctant to accept concepts of an "unconventional" nature.

Creation of the new Propaganda Branch in G-2 was formally announced on 15 November 1943 by Military Intelligence Division Directive No. 78. During the General Council meeting held the same day, General Kroner, the G-2 representative, stated that the head of psychological warfare activities in North Africa, General McClure, had indicated that there was no corresponding agency in the War Department to consider

18 PSYCHOLOGICAL WARFARE IN WORLD WAR II

psychological warfare problems "at the proper level." General Kroner concluded that "this is indicated as a need for this very important branch."⁵² The seed, planted 6 months earlier by Jackson in his discussions with Assistant Secretary of War McCloy and by McClure's own statements during the intervening period, had finally borne fruit.

The primary responsibility of the new branch was to coordinate propaganda functions for the War Department. It prepared propaganda items for use by OWI, CIAA, and other nonmilitary organizations. It advised the G-2 on all propaganda problems presented by theater commanders. It coordinated propaganda matters brought before the JCS and the CCS by the War Department. It shepherded OWI and CIAA plans through the JCS, and it coordinated with similar branches in the Navy and State Department. Finally, the branch chief served as the Army member of the JCS liaison with OWI and CIAA.⁵³

At the end of the war, a few senior officers recognized the need to build upon the Army's experience and retain a capability for psychological warfare. In a December 1945 letter to the War Department, Major General L. L. Lemnitzer, then head of the Joint Strategic Survey Committee of the JCS, stated:

To avoid a repetition of the PWB mistakes we made in World War II and to take full advantage of the experience gained in that war, I recommend that a comprehensive study be made of this subject at an early date with a view of:

1. Analyzing all available PWB material of World War II, including particularly the PWB reports from the various theaters of operations to establish sound PWB principles, techniques, organization, equipment and procedures for future employment of this weapon.
2. Establishing short courses in our staff schools to provide future commanders and staff officers with a general understanding and appreciation of this new weapon of warfare.
3. Examining the feasibility of establishing a small PWB section in the War Department to provide continuing study of this subject, or failing that, to assign this responsibility to an existing section or agency best prepared to assume it.⁵⁴

The Propaganda Branch had foreseen the need for such a study. In May 1945 letters had been sent to theater PWB's requesting the appropriate historical materials.⁵⁵ The branch continued in existence until January 1947, when the responsibility for psychological warfare activities was transferred from G-2 to the Plans and Operations Division.

Appraisal

It is impossible to discuss the evolution of Army experience in psychological warfare during World War II without acknowledging the impact of the major civilian agencies that had an interest in this activity. First, the Coordinator of Information, then its successor, the Office of Strategic Services, and, finally, the Office of War Information—all influenced the Army's development of a psychological warfare capability as they engaged in interagency struggles to sort out responsibilities in the new field. In many respects, it was the confusion generated by this profusion of agencies that forced the War Department to reestablish a Propaganda Branch in November 1943. Through this office and the theater Psychological Warfare Branch, the Army worked closely with these agencies, and in particular OWI, for the duration of the war.

This reliance on civilian agencies did not sit well with many military professionals. A quotation from the unsigned letter of an officer with Headquarters, Western Task Forces, in 1942 illustrates this attitude:

I still believe we could get along far better without the OWI. The psychological situation is far too complex to be handled by poets and gentlemen of the press in Washington and even the German Propaganda Machine worked in reverse in the face of actual military operations. The only propaganda which can achieve results is the propaganda of deeds not words. One U.S. medium tank has proved far more effective than all the bag of trick gadgets, which merely offend good taste and give nothing concrete where want is great.

The officer ended his letter with the conclusion, "I believe that such agencies as the OWI and OSS can be profitably eliminated in the future."⁵⁶

Ironically, it was a civilian—Assistant Secretary of War John McCloy—who pushed the Army into developing a branch at the War Department for planning and coordinating psychological warfare activities, initially in June 1941 and again in November 1943. And it was a civilian—C. D. Jackson of OWI—who, as General McClure's deputy, provided Assistant Secretary McCloy with the PWB/AFHQ organizational papers that stimulated resurrection of a psychological warfare branch in 1943. The initiative shown by influential civilians to urge conservative Army leaders to venture into a new and uncertain field is a theme we shall see throughout our investigation of the origins of a special warfare capability for the Army.

Certainly Brigadier General McClure was an exception to this theme. The civilian-military team that he headed, first in North Africa PWB/AFHQ, then later in PWD/SHAEF, served as the model for successful Army psychological warfare operations during the war. The Mobile Radio Broadcasting companies employed in Europe were the first tactical propaganda units in Army history. McClure himself strongly urged establishment of a central psychological warfare agency in the War Department. All in all, he was the most important Army officer in this new field during World War II.

Although small throughout, the Propaganda Branch, G-2—and its predecessors, the Psychologic Branch, the Special Study Group, and the Psychological Warfare Branch—performed a low-key, but valuable service. Its “principal success,” states *A History of the Military Intelligence Division*, “was in the guidance it gave to operational units in the field, and as an agency for the coordination of propaganda activities with military operations.”⁵⁷ While the MID history may somewhat overstate the extent of this success, nonetheless, that such an agency was deemed necessary was demonstrated by the creation of the Propaganda Branch 10 months after dissolution of the Psychological Warfare Branch.

Army personnel employed in psychological warfare in all theaters probably never totaled more than 2,000 at any one time,⁵⁸ a minuscule number when compared to many other activities. Despite the often less-than-enthusiastic manner in which the Army embraced it, psychological warfare gained respectability. Formal organizations and procedures were developed that eventually bestowed this new endeavor with a degree of legitimacy.

The impact of psychological warfare is always difficult to assess. But General Eisenhower, at least, thought the European experiment useful:

In this war [he wrote in PWD/SHAEF's account of its operation], which was total in every sense of the word, we have seen many great changes in military science. It seems to me that not the least of these was the development of psychological warfare as a specific and effective weapon.

The exact contribution of psychological warfare toward the final victory cannot, of course, be measured in terms of towns destroyed or barriers passed. However, I am convinced that the expenditure of men and money in wielding the spoken and written word was an important contributing factor in undermining the enemy's will to resist and supporting the fighting morale of our potential Allies in the occupied countries.

Without doubt, psychological warfare has proved its right to a place of dignity in our military arsenal.⁵⁹

Thus, World War II saw the Nation—and the US Army—develop the foundation for a modern psychological warfare capability. What it would do with this foundation, so painfully acquired, remained to be seen.

III

UNCONVENTIONAL WARFARE IN WORLD WAR II

The task of tracing the origins of unconventional warfare in the US Army is complicated by the fact that in the early 1960's several World War II "elite" units were included in the official lineage of Special Forces. One of these was the 1st Special Service Force, a joint United States-Canadian unit formed in 1942 at Fort William Henry Harrison, Montana, and commanded by Major General Robert T. Frederick. Also included in the official lineage were US Army Ranger battalions, the first of which was formed on 19 June 1942 at Carrickfergus in Northern Ireland, under the command of Colonel William O. Darby. A similar organization, Brigadier General Frank Merrill's 5307th Composite Unit (Provisional), better known as "Merrill's Marauders," was not officially a part of Special Forces lineage but has been informally adopted by Special Forces.¹

Whatever the "official" lineage, however, none of these units by definition was an unconventional warfare organization. According to the *Dictionary of U.S. Military Terms*, unconventional warfare "includes the three interrelated fields of guerrilla warfare, evasion and escape, and subversion . . . conducted within enemy or enemy-controlled territory by predominately indigenous personnel usually supported and directed by personnel from an outside country."² The 1st Special Service Force, the Ranger battalions, and "Merrill's Marauders" did not fit this description; they were primarily long-range penetration organizations that specialized in reconnaissance, raiding, and commando operations. British Royal Marine Commandos and Orde Wingate's Raiders performed similar tasks for the British throughout the Second World War. Yet the author himself remembers standing in a mass formation with the 77th Special Forces Group at Fort Bragg in early 1960 when the 1st Special Service Force was

reconstituted and consolidated with the Ranger battalions, then activated as the parent unit of all Special Forces Groups; it was a memorable day, as retired Major General Frederick came down from Canada to preside over the conferral of 1st Special Service Force and Ranger unit colors, lineage, and honors to the Army's Special Forces.

Looking back on that scene, one wonders why Special Forces felt it necessary to adopt the lineage of units that were not true forerunners of unconventional warfare. An argument could be made that a few individuals from those units became early members of Special Forces, and that some of the tactics and techniques of their former units were incorporated into Special Forces training. But these alone are insufficient explanations. Apparently the answer was simply that the Army had no true unconventional warfare units of its own; therefore, someone in authority took the best alternative and borrowed the lineage of some well-known "elite" special-purpose units of World War II fame. While the lineage of those units undoubtedly adds to the luster of Special Forces, little is served by dwelling on their history as forerunners of a US Army unconventional warfare capability.

OSS and Unconventional Warfare

Personnel of the Office of Strategic Services (OSS), however, did participate in unconventional warfare activities during World War II, and the US Army contributed officers and men to this unique organization. OSS bore the stamp of its first chief, William Joseph Donovan, an imaginative, forceful man nearing 60, known since his youth as "Wild Bill." Donovan was a highly decorated World War I hero who had become a millionaire Wall Street corporate lawyer. President Roosevelt selected him, as one critic of OSS expressed it, "to direct the New Deal's excursion into espionage, sabotage, 'black' propaganda, guerrilla warfare, and other 'un-American' activities."³ Established to meet the special conditions of World War II, OSS was the first agency of its kind in the history of the United States. Largely because of the imagination and foresight of General Donovan, OSS "undertook and carried out more different types of enterprises calling for more varied skills than any other single organization of its size in the history of our country."⁴ Such disparate tasks required a pot-pourri of talent, with Americans from all walks of life participating. OSS strength had been estimated at 12,000 to 30,000; the official *War Report of the OSS*, however, released in 1976, placed the agency's maximum strength in December 1944 at 13,000 personnel, approximately 7,500 of whom were stationed overseas.⁵

Donovan's agency was divided into intelligence, special operations, and training functions. Intelligence and special operations were each further subdivided into several branches: Research and analysis, secret intelligence, and counterespionage, for example, fell under intelligence; and sabotage, guerrilla warfare, and psychological warfare fell under special operations. Psychological warfare bore the deceiving title "Morale Operations" (MO); that branch was responsible for creating and disseminating "black," or covert propaganda.⁶

In January 1943, during one of his several reorganizations of OSS, Donovan established the post of Deputy Director, Psychological Warfare Operations (PWO) to supervise the activities of both the Special Operations (SO) and Morale Operations branches. In May 1943, he organized a third branch, the Operational Group (OG) Command, to direct guerrilla warfare, and placed it under the Deputy Director, PWO. Later, he simplified this title to Deputy Director, Operations, with SO, MO, and OG as subordinate branches.⁷ Through all this confusion of seemingly interchangeable organizational titles and activities, Donovan, even after losing the responsibility for overt, or "white," propaganda to the Office of War Information (OWI) in March 1942, continued throughout the war to perceive a close interrelationship between psychological warfare and what in later years became known as unconventional warfare.

OSS and the Army

Although its role in strategic intelligence was important, the aspect of OSS most applicable to a discussion of unconventional warfare was "special operations," a term that covered, according to Harry Howe Ransom,

espionage, counterintelligence in foreign nations, sabotage, commando raids, guerrilla and partisan-group activity . . . various other forms of psychological warfare and underground operations. In essence, OSS assumed operational responsibility in a field previously ignored and scorned by many diplomats and military professionals.⁸

The last point is significant; OSS was not a military organization, but personnel from the military services did participate in its activities. The Army contributed the most military personnel during the war—4,097 by November 1943 and 8,360 by May 1945.⁹

As early as 10 October 1941, when he had created a "Special Activities" section in the Coordinator of Information (COI), Donovan had

seriously considered the idea of special operations, including the formation of guerrilla units. He had been impressed by the organization and methods of Great Britain's Special Operations Executive (SOE). Moving quickly, by December he had proposed to the President that the United States organize "a guerrilla corps, independent and separate from the Army and Navy, and imbued with a maximum of the offensive and imaginative spirit." By early 1942 he had requested training areas from the Department of Interior and instructional personnel from the War Department. Lack of a War Department allotment, however, impeded initial recruiting efforts for the projected guerrilla groups.¹⁰

Predictably, the military services had misgivings about a guerrilla corps "independent and separate from the Army and Navy." During the period after Pearl Harbor, before the Joint Chiefs of Staff (JCS) had been organized, US Forces were in disarray. Furthermore, Donovan had not prepared the bureaucracy for his innovative proposal. As William R. Corson observes: "For Donovan to think, even with FDR's endorsement, that such an organization could be brought to pass in the face of the military's obvious objections was, charitably, an act of lunacy on his part."¹¹

Aside from the bureaucratic sensitivities involved, many senior military leaders had serious reservations about the practicality of Donovan's ideas. Major General Strong, Army G-2, commenting on a memorandum from COI in June 1942 (by this time COI had been dissolved and Donovan was Director, OSS) on "Organization of Guerrilla Warfare Command," regarded the proposal as "essentially unsound and unproductive." Strong believed that most of the operations envisaged for such a force should be carried out by specially trained regular troops; therefore, "to squander time, men, equipment, and tonnage on special guerrilla organizations and at the same time to complicate the command and supply systems of the Army by such projects would be culpable mismanagement." Although he recognized the value of sabotage and subversive activities to military operations, Strong questioned the feasibility of directing such forces from Washington. In his opinion, guerrilla warfare, if conducted at all, was a function of regular Army task forces whose operations would "take the form of raids and are practically identical with commando operations."¹² Strong's last statement reveals a fundamental, but not uncommon, misunderstanding of the nature of guerrilla warfare.

Despite the reluctance of the military services, one benefit of placing OSS under the direction of the Joint Chiefs of Staff was the issuance of JCS 155/4D on 23 December 1942. That directive gave OSS responsibility for the organization and conduct of guerrilla warfare, and specified that

personnel employed in guerrilla warfare be limited to "organizers, fomenters and operational nuclei of guerrilla units."¹³ Thus OSS had a charter. While Donovan's initial ideas for a "Guerrilla Group," comprised of 10 "Guerrilla Battalions," did not survive intact, he did ultimately create a variety of unconventional warfare activities that depended heavily on participation by Army personnel.

Probably the best known unconventional warfare operation in which US Army personnel participated was that of Detachment 101 in Burma, commanded by Colonel W. R. Peers. Detachment 101 organized and trained native Kachin tribesmen to conduct successful guerrilla warfare operations against the Japanese in 1943-45. One former OSS member suggested in a conversation with the author that 101 "represented a sort of microcosm of the entire range of OSS capabilities."¹⁴ The Kachins, led by 101, performed a variety of unconventional warfare missions in support of Allied conventional operations. For example, they gathered intelligence, aided escape and evasion efforts for downed US fliers, undertook espionage and counterespionage missions, and attacked Japanese communications lines.¹⁵ Almost 700 US Army officers and enlisted men contributed to 101's operations in Northern Burma over a 3-year period. Total guerrilla strength surpassed 10,000 by February 1945. After the completion of its mission in Burma, Detachment 101 received the Presidential Unit Citation.¹⁶ According to one student of OSS history, Detachment 101 performed "the most successful OSS guerrilla operations of the war."¹⁷

While Detachment 101 may have enjoyed the most spectacular tactical combat success, the major OSS effort during the war was directed at France.¹⁸ Here, US Army personnel made a significant contribution to the three groups of OSS operational units that worked behind enemy lines in direct support of the French Resistance. The first group consisted of 77 Americans who worked in civilian clothes as organizers of secret networks, as radio operators, or as instructors in the use of weapons and explosives. Thirty-three members of that group were active in France before 6 June 1944, D-day. The second group consisted of 78 Americans who were members of the "jedburgh teams," organized in Great Britain or Algiers and parachuted into France beginning on D-day. Jedburgh teams were composed of a British or American officer, a French officer, and a radio operator. These teams, usually working in uniform, coordinated and legitimized Maquis activities under the aegis of Supreme Headquarters, Allied Expeditionary Force (SHAEF), obtained supplies for the resistance groups, reported significant intelligence, and as a secondary role engaged in guerrilla warfare and attacks on German lines of retreat or communication.¹⁹

The largest OSS group in France consisted of some 356 Americans who were members of OSS "Operational Groups" (OG's). All recruits for the OG's were French-speaking volunteers from US Army units, primarily infantry and engineer (for demolition experts). Medical technicians were procured from the Medical Corps, radio operators from the Signal Corps.²⁰ Working in uniform, these teams parachuted behind the lines after D-day to perform a variety of missions. They cut and harassed enemy communication lines; attacked vital enemy installations; organized, trained, and sustained the morale of local resistance groups; and furnished intelligence to the Allied armies. Interestingly, Donovan distinguished between the missions of Rangers and Commandos and those of the OG's, even though some aspects of their tactical operations were similar. The crucial difference in his mind was that the OG's "fitted into the pattern of OSS activities behind the enemy lines."²¹

Actually, the mission of the OG's was distinct not only from that of the Rangers and Commandos but also from that of other OSS activities. The OG Branch had been established on 4 May 1943; then, on 27 November 1944, the OG Command was activated as a separate entity within OSS. In addition to basic military training, OG recruits received specialized instruction on such subjects as foreign weapons, operation and repair of enemy vehicles, enemy espionage organizations, communications, demolitions, organization and training of civilians for guerrilla warfare, parachute jumping, and amphibious operations. Their basic function was to organize resistance groups into effective guerrilla units, equip them with weapons and supplies, and lead them into attacks against enemy targets, in concert with orders from the theater commander. As for how the concept of their mission differed from those of other Special Operations activities, an OSS general orientation booklet published in 1944 described it this way: "OG personnel activate guerrillas as military organizations to engage enemy forces. They always operate in uniform as military units and are not primarily concerned with individual acts of sabotage." Clearly, the OG's were primarily designed for guerrilla warfare, and the principles that they embodied were to significantly influence the Army's effort to develop a similar capability in later years.²²

Another pertinent aspect of the OG concept was its basic operational unit, the section, composed of 2 officers and 13 enlisted men. Eight years later the first formal unconventional warfare unit formed in the US Army—the 10th Special Forces Group—was to adopt this same structure for its basic operational detachment. Also significant is the fact that the first commander of the 10th Special Forces Group was Colonel Aaron Bank, an Army officer who had served with OSS in France. Even the name

"Special Forces" is reminiscent of the combined headquarters formed in 1943 by OSS and SOE which in 1944 was renamed "Special Forces Headquarters" (SFHQ).²³

"Throughout France," states the *War Report of the OSS*, "before and after D-day, SFHQ supplied, directed, and communicated with the Maquis in the largest resistance uprising in history."²⁴ A less enthusiastic analysis of the role of SFHQ, and in particular of OSS, was rendered by the G-2 Division, War Department General Staff (WDGS), in a "Summary of French Resistance, 6 June-31 August 1944." The opening paragraph of that summary reads as follows:

It must be borne in mind that so-called resistance activities in France were the combination of the efforts of the local French themselves under the organization and direction of American, British, and French agents of SFHQ infiltrated from the United Kingdom and North Africa. In the majority of cases, the specific acts of sabotage were committed directly by the local French; and it is to them, for their courage and daring, that the greater portion of credit for the end results accomplished must be given. However, it is not at all out of place for OSS in general, and SO particularly, to take credit for its share in the planning and directing of the overall scheme of sabotage.²⁵

Once again, this evaluation reveals more about the low regard accorded unconventional activities in general, and the OSS in particular, by many Army officers, than it does about the value of the resistance itself.

While the success of OSS and SOE efforts in France is difficult to estimate, General Eisenhower, commenting on how effectively the Maquis cut enemy lines of communication in support of the Normandy landings, stated that the French Resistance forces were worth 15 divisions to him in his invasion of the Continent.²⁶

Guerrilla Warfare in the Philippines

One large unconventional warfare operation not directed by OSS, but in which US Army personnel played a key role, was the Philippine Campaign, 1941-45. When the Japanese overran the islands, several Army officers escaped to the mountains, where they established extensive intelligence networks and guerrilla forces. In Northern Luzon, Lieutenant Colonel Russell Volckmann equipped, trained, and commanded five Philippine regiments that successfully engaged the Japanese in combat both

immediately before and during the landing of US forces at Lingayen in January 1945. On Mindanao, Lieutenant Colonel Wendell Fertig eventually consolidated some 37,000 guerrilla troops and held 90 percent of the island until the end of the war.²⁷ Both Volckmann and Fertig were to figure prominently in the activation of the Army's Special Forces in the early 1950's.

Attitudes Toward Unconventional Warfare

Near the end of World War II, President Roosevelt had foreseen the need for a permanent strategic intelligence organization for the postwar period, and asked General Donovan to give some thought to its possible structure. Replying with a "Memorandum for the President," Donovan proposed the "establishment of a central intelligence authority," which would report directly to the President, "with responsibility to frame intelligence objectives and to collect and coordinate the intelligence material required by the Executive Branch in planning and carrying out national policy and strategy." Donovan also urged the President to keep the trained, specialized personnel of OSS from being dispersed after the war so that they could contribute to this proposed organization.²⁸

When someone in the Federal bureaucracy leaked a copy of Donovan's memorandum, the resultant public furor over what the *Chicago Tribune* called a proposed "Super-Spy System for Postwar New Deal" forced Roosevelt to tell Donovan that he "would wait out the storm and submit the proposal at a more propitious moment." That was in February 1945. In April the President died, and with his death the fortunes of OSS were dealt a severe blow.²⁹ Whereas Donovan had enjoyed the confidence of Roosevelt, Edward Hymoff charges that Truman "had no concept of OSS as an organization nor what it represented for the future of American foreign policy decisionmaking."³⁰

President Truman ordered that the OSS be disbanded on 1 October 1945. One scholar has suggested that Truman was motivated

apparently because of pressures from the armed services, the Federal Bureau of Investigation [FBI], the Department of State, and the Bureau of the Budget. Another influence was undoubtedly Mr. Truman's own apparent prejudice against cloak and dagger operations by the United States. To continue an international spying organization in peacetime seemed somehow un-American in the atmosphere of the immediate postwar period.³¹

It is instructive to dwell on this analysis for a moment. First, one must not fall into the trap of exaggerating the success of OSS unconventional warfare operations. It may be true, as one historian has suggested, that the most significant long-range work was done in strategic intelligence by the much less publicized and romanticized "college professors, lawyers, and others who worked tirelessly in the research units, in the analysis of economic objectives, and in other operational analysis and technical groups within OSS." It was these groups who contributed much data on which successful wartime operations were based, and who developed techniques useful to contemporary intelligence research and analysis.³²

Moreover, the unconventional warfare operations of OSS actually constituted a small portion of the overall US war effort, and many OSS resistance activities were haphazard, poorly organized, and uncoordinated with overall operations. Yet, one World War II participant has written that "unconventional warfare operations (not necessarily those sponsored by OSS) during World War II reaped a substantial strategic harvest," citing as examples the accomplishments of Soviet, Yugoslav, Albanian, and French partisans in immobilizing large numbers of German and Italian divisions.³³ The point of this discussion, however, is not to judge the success or failure of OSS unconventional warfare operations, but to illustrate—as another resistance participant, Charles Thayer has done—that the first American experience with modern, sophisticated, large-scale guerrilla movements took place during World War II, and furthermore, that a civilian-led US agency, the OSS, and not the military services, stepped in to capitalize on the potential for guerrilla warfare.³⁴

In providing leadership in that area, General Donovan's infant organization incurred the wrath of other governmental agencies, including the military services. Opposition to the intelligence and special operations efforts of OSS was so intense that Dr. William Langer, head of Research and Analysis, later observed that "perhaps Bill Donovan's greatest single achievement was to survive." Even after being placed under the direction of the JCS in 1942, Donovan insisted on OSS independence and freedom from subservience to any single agency or military service.³⁵ It was this independence of OSS that was especially resented by "the traditionalists in the armed forces," claims Edward Hymoff in *The OSS in World War II*, primarily because "they had been plagued during the war by citizens in uniform who had become officers only because they were in OSS." In addition, "even more frustrating for the military professionals were the irreverent individuals in OSS who constantly flouted both authority and standard operating procedures."³⁶ Hymoff himself was a member of OSS,

and perhaps best typifies the attitude of many Donovan "operatives" by his statement that one of the things he liked best about the unorthodox agency was that "it was so unmilitary."³⁷ Donovan protected his "irreverent individualists" by reportedly often saying, "I'd rather have a young lieutenant with guts enough to disobey an order than a colonel too regimented to think and act for himself."³⁸

One of the most consistent and outspoken opponents of OSS, Major General George V. Strong, Chief of Army G-2 (Intelligence), felt from the outset of COI that Donovan's organization conflicted with Army interests. Strong also argued that "Wild Bill's" independence would make him ineffective as a "team player." Later, when OSS came under the direction of the JCS and was struggling for survival, General Strong, according to Corey Ford, "refused to exercise his authority so that OSS could obtain the supplies and personnel of which it was desperately in need." In fact, 6 months passed before the JCS gave Donovan's organization any operational instructions or official directives about its responsibilities. The logjam broke only after President Roosevelt learned of the delay and told General George C. Marshall, Chairman of the JCS, to "give Bill Donovan a little elbow room to operate in."³⁹

In the face of such determined opposition, Donovan survived only because of the personal backing of Roosevelt. As Stewart Alsop and Thomas Braden noted in *Sub Rosa: The OSS and American Espionage*, the major adversaries of OSS—the Army, the Navy, and the FBI—"were fully conscious of Donovan's close friendship with Roosevelt," and therefore were aware that "if it came to a showdown, the back door of the White House was always open to William J. Donovan and a special plea."⁴⁰ The parallel between Roosevelt's support of OSS and John F. Kennedy's vigorous promotion of Special Forces in the face of reluctant foot-dragging by some senior military leaders⁴¹ will not be lost on students of special warfare history, particularly when one considers that both organizations lost influence after the deaths of the two presidents.

Although the services—particularly the Army—contributed personnel to OSS, some commanders were reluctant to use OSS teams in their areas of responsibility. Detachment 101, for example, was initially prevented from operating in Burma because General Joseph Stilwell, commander of American forces in China, Burma, and India, was "fervently prejudiced against the 'irregular' military activity proposed by OSS," and "disparaged guerrilla tactics as 'illegal action' and 'shadow boxing.'"⁴² Stilwell eventually relented and later praised the contributions of 101, but General Douglas MacArthur steadfastly refused to permit OSS to operate

in the South Pacific throughout the war, even when General Donovan offered a plan to support guerrilla operations in the Philippines.⁴³

In addition to the personal rivalry, bureaucratic antipathy, and jealousy that were provoked by General Donovan's organization, the operations of OSS may have antagonized military leaders of the "regular" US Army who, by training and experience, were conditioned to think in terms of conventional warfare. Some of these leaders, therefore, may well have looked askance at what they considered the unorthodox and unnecessary OSS guerrilla warfare activities. Charles Thayer, in his book *Guerrilla*, claims that many general officers "harbor a deep-seated aversion to guerrillas, apparently because they fit no conventional pattern and their underhanded clandestine tactics have little in common with the military code of honor and chivalry which career soldiers . . . like to associate with their profession."⁴⁴ In another attempt to explain why so many US military leaders opposed unconventional warfare, Franklin Mark Osanka, a student of guerrilla activities, offers this more convincing rationale:

Guerrilla warfare has not been an American forte because in most its wars . . . the United States has not had to rely upon guerrilla warfare. American experience with guerrilla warfare has been limited by the strength of American arms. The United States has been able to mobilize overwhelming economic and military power and to bring it to bear directly on the enemy, attacking him not where he was weakest but where he was strongest, because we are stronger still. American military doctrine has reflected this experience.⁴⁵

Despite opposition from the military, however, by the end of the war OSS had developed a nucleus of officers trained and experienced in guerrilla warfare. According to Thayer, serious efforts were made to persuade the Pentagon to retain this nucleus for future war, but "these recommendations were to no avail on the ostensible ground that such 'elite' groups were incompatible with the democratic tradition."⁴⁶ While this explanation of the Pentagon's refusal may seem extreme, a respected military historian, Russell Weigley, states in his *History of the US Army* that the Army has a "long-standing suspicion of elite forces."⁴⁷ Certainly this "suspicion" may explain the Army's reluctance to create an "unconventional warfare" capability in the immediate postwar period, particularly when memories of OSS-Army rivalry were still fresh. Thayer does point out that while most of the personnel trained in guerrilla warfare were discharged, a nucleus of psychological warfare experts was retained, "largely as a result of the newly acquired respectability of this technique in the course of World War II."⁴⁸ What Thayer fails to mention is that the Army possessed its own

formal staffs and units charged with the responsibility for psychological warfare. In other words, psychological warfare had an identity, however tenuous, within the Army, an identity that guerrilla warfare did not share because most of the officers and men who operated in that area were assigned to OSS—an organization certainly not considered part of the Army. At any rate, psychological warfare “survived” in the immediate post-World War II Army, although just barely, while the Pentagon apparently gave little consideration to building on the nucleus of OSS-trained officers to create a formal unconventional warfare capability.

Dissolution of OSS

Dismemberment of OSS took place quickly with President Truman's order dissolving the agency in October 1945. By this time General Donovan had retired to civilian life, and the remains of his former organization were dispersed to the unreceptive State and War Departments. Carefully trained personnel drifted away to other jobs outside Government. Portions of the Secret Intelligence and Special Operations branches joined the War Department's newly established Strategic Services Unit (SSU), which, according to Corey Ford, “was nothing more than a caretaker body formed to preside over the liquidation of the OSS espionage network.” Brigadier General John Magruder, formerly assistant director of OSS, and head of SSU until February 1946, resigned in protest over the agency's continuing loss of highly trained personnel. For all practical purposes, any formal US capability for guerrilla warfare disappeared. Only a few secret intelligence and analysis personnel remained, and there was little need for their skills in the immediate postwar period.⁴⁹

Appraisal

The only true unconventional warfare organization in the United States during World War II was the Office of Strategic Services, a civilian agency. Although a few Army officers participated in non-OSS directed guerrilla operations in the Philippines, most of the Army's experience in unconventional warfare came from providing personnel to serve with OSS. Of particular note were the OSS Operational Groups that were recruited entirely from the Army and employed extensively in Europe. In terms of organization, training, and job description, the OG's presaged the basic operational detachment adopted by the Army's 10th Special Forces Group upon its creation in 1952. Thus, for the Army the true roots of a modern unconventional warfare capability lay in its association with OSS.

Clearly, the central figure in unconventional warfare during World War II was Major General William Donovan. Edmond Taylor, a former member of COI/OSS, vividly describes in his book *Awakening From History* Donovan's vision of the potential of unconventional warfare:

The paramilitary and guerrilla aspects of the OSS mission probably interested him more than any other. By combining unlimited nerve, Yankee ingenuity, and self-reliance, the American tradition of frontier warfare, and the most advanced twentieth-century science or technology, Donovan believed that effectively unconventional solutions could be found to almost any strategic problem. Above and beyond his other, sometimes mutually incompatible goals, Donovan, I think, hoped to demonstrate through OSS that the normally untapped reserves of individual courage and resource, and the dynamism of the individual will to win constitute the basic raw materials of victory, and that in an increasingly mechanized world, human dignity is still not only a moral but a strategic quantity.⁵⁰

Taylor, an unabashed admirer of Donovan ("I stayed in OSS, though sometimes attached to it by nothing more tangible than the invisible presence of Donovan in my mind") offers a moving personal opinion about the general's dedication to unconventional warfare: "As far as I was concerned General Donovan's demonstration was conclusive, and it made an abiding contribution to the development of my personal outlook on the unending struggle for survival among nations and civilizations, institutions and ideologies, that we call history."⁵¹

Without question, Donovan inherited many of his ideas from the British. But only a man of his stature, perseverance, and personal dynamism could have successfully applied those unorthodox concepts in the face of the intense opposition and competing bureaucratic interests that marked US interagency efforts during the war. Thus, while some of the Army officers detailed to OSS were to play important roles in the creation of the 10th Special Forces in the early 1950's, Donovan must be considered the spiritual father of Army unconventional warfare.

Actually, Donovan's influence on the Army extends beyond unconventional warfare; it also embraces psychological warfare. As discussed earlier, the initial idea behind formation of the Coordinator of Information, at least as conceived by Donovan, included combining intelligence, special operations, and propaganda functions in the same agency. Indeed, his all-encompassing concept of "psychological warfare" included all the elements—and more—of what the Army was later to call "special warfare" (with the exception of counterinsurgency). Probably Donovan's

greatest disappointment was losing the responsibility for open, or "white," propaganda, to the Office of War Information in 1942 when COI became OSS. Even after this setback, Donovan continued to stress throughout the war the close interrelationship of psychological warfare and special operations (unconventional warfare). It is the author's belief that this interrelationship, so firmly espoused by Donovan, influenced General McClure's ideas about combining psychological and unconventional warfare functions at both the Army Staff and the Psychological Warfare Center in the early 1950's. COI, then, can be considered a common point of origin for both unconventional and psychological warfare in modern American experience, and William Donovan can also legitimately be considered the spiritual father of a "special warfare" capability for the Army.

Looking at the Army's experience with both psychological and unconventional warfare during World War II, one is struck by the similarities of institutional responses to those two relatively new activities. To many military professionals, both were unorthodox, untried activities, heavily influenced by civilians. Together they never involved more than 10,000 Army personnel at any one time—a minor sideshow, thought many, compared to the overall "conventional" war effort. The military response to both was at times hesitant, skeptical, indifferent, and even antagonistic.

Psychological warfare, however, gradually gained greater acceptance within the Army. The crucial difference was that formal staff sections and units were developed by the Army to employ this weapon. There was still a heavy reliance on civilians, but military men were in command and made the final decisions as to its use, particularly in the virtually autonomous theaters. Thus psychological warfare acquired a measure of legitimacy within the Army and survived as a formal activity after the war.

Unconventional warfare, on the other hand, remained the province of a civilian agency, the OSS. Although Donovan's outfit relied heavily on Army personnel and was subject to JCS direction, it nonetheless remained a separate and distinct organization. The tensions created by this independent, "unconventional" posture are perhaps best described in the final portion of the *War Report of the OSS*:

An agency engaged in secret and unorthodox activities is peculiarly susceptible to difficulties in its relations with other agencies and departments of its government. Secrecy inevitably creates a psychological attitude of distrust and suspicion on the part of others. In many instances, this attitude is aggravated by the clash with established procedures and regulations which the performance of irregular and unorthodox activities often entails.⁵²

As a result of this independence, OSS—and unconventional warfare—did not gain within the Army the degree of acceptance ultimately enjoyed by psychological warfare. Lacking solid institutional roots, OSS failed to survive with the war's end. Its demise meant the disappearance of any formal US capability for unconventional warfare. Only the legacy of William Donovan and the experience of the OSS personnel who remained were left to build on for the future. Both would be drawn upon with the coming of the cold war.

IV

THE INTERWAR YEARS, PART I: PSYCHOLOGICAL WARFARE

"It is hard now to remember how menacing the Soviet encroachments appeared," wrote Ray Cline in 1976.¹ Cline, a former Deputy Director of the Central Intelligence Agency (CIA), was speaking of the 1947-48 period, during which American concerns about Soviet intentions were gathering in intensity. The situation was such that in March 1948 the Commander in Chief, European Command (EUCOM), Colonel Lucius Clay, cabled Washington: "I have felt a subtle change in Soviet attitude which I cannot define but which now gives me a feeling that it [war] may come with dramatic suddenness."² The Soviet Union's expansion into Eastern Europe; pressures on Greece, Turkey, and Iran; the Berlin Blockade; the fall of China to the Communists; the U.S.S.R.'s detonation of an atomic device in 1949; and the Korean war in 1950—these were just some of the developments that gradually hardened the attitudes of US policymakers and shattered American dreams of a post-World War II peace.

These attitudes emerged from what Daniel Yergin has called the "two commanding ideas of American postwar foreign policy—anti-Communism and a new doctrine of national security." The results, says Yergin, were policies that "included containment, confrontation and intervention, the methods by which US leaders have sought to make the world safe for America."³ As our policymakers struggled to find effective means to respond to the perceived military and ideological threats, they examined ways to improve US capabilities in intelligence and psychological and unconventional warfare. The first result of this quest was the creation of the CIA, but it was also to have an impact upon the military services, particularly the Army. To understand the origins of a special warfare capability for the Army, we first must sketch the early history of the CIA, for the two are inextricably interwoven.

Creation of the CIA

Three months after he disbanded the Office of Strategic Services (OSS), President Truman on 22 January 1946 created the Central Intelligence Group (CIG)—the direct predecessor of the CIA. Truman had realized the need for a centralized body to gather and coordinate intelligence information and to eliminate friction among competing military intelligence services. By the spring of 1946, the War Department's Strategic Services Unit was transferred to CIG, giving it the remnants of an OSS clandestine collection capability. This led to the formation of the Office of Special Operations (OSO), which was responsible for espionage and counterespionage. By June 1946, CIG had a strength of approximately 1,800, of which about one-third were overseas with OSO.

With the passage of the National Security Act in July 1947, CIG became an independent department renamed the Central Intelligence Agency. The major tasks assigned to the agency were the following: (1) to advise the National Security Council (NSC) on matters related to national security, (2) to make recommendations to the NSC about the coordination of intelligence activities of the departments, (3) to correlate and evaluate intelligence and provide for its dissemination, (4) to carry out "services of common concern," and (5) "to perform such other functions and duties related to intelligence affecting the national security as the NSC from time to time direct." The CIA also assumed the previous functions of CIG—clandestine and overt collection, production of national current intelligence, and interagency coordination for national estimates.

Although the original discussions about the creation of both CIG and the CIA had focused on the problem of intelligence coordination, within a year of the 1947 act the CIA was charged with the conduct of covert psychological, political, paramilitary, and economic activities. On 14 December 1947, the National Security Council adopted NSC 4/A, which gave the CIA responsibility for covert psychological operations; on 22 December, the Special Procedures Group was set up within the CIA's Office of Special Operations to carry out psychological operations. By June 1948, NSC 10/2 had broadened that authority for covert operations to include political and economic warfare and paramilitary activities (such as sabotage and support to guerrillas). The Special Procedures Group was replaced by the Office of Special Projects, which shortly was renamed the Office of Policy Coordination (OPC). Its head was Frank Wisner, the former OSS station chief in Rumania. By the end of 1948, the CIA had a limited covert action capability.

The capability for covert action expanded as a result of the Korean war and the CIA's participation in paramilitary activities in the Far East. OPC's strength rose from 302 in 1949 to 2,812, plus 3,142 overseas contract personnel, in 1952; its budget, from \$4.7 million to \$82 million; and its number of overseas stations, from 7 to 47 during the same period. Another stimulus for CIA/OPC's expansion was NSC 68, issued on 14 April 1950, which called for a nonmilitary offensive against the Soviet Union, including covert economic, political, and psychological warfare to foster unrest in U.S.S.R. satellite countries. Similarly, NSC 10/5, which on 21 October 1951 had replaced NSC 10/2, again called for intensified covert action and reaffirmed the CIA's responsibility for its conduct. Finally, in August 1952, the clandestine collection and secret intelligence functions of OSO merged with the covert action capabilities of OPC. The resulting amalgamation was called the Directorate of Plans, with Frank Wisner of OPC in charge and Richard Helms from OSO as his second in command. Thus by 1953 the CIA was six times the size it had been in 1947, and the clandestine services had become by far the largest component in the agency.⁴

This brief overview has only highlighted the CIA's early history, but a few points should be emphasized. First, there was the influence of OSS. Corey Ford, Donovan's biographer, states that the CIA "was the direct outgrowth of Donovan's World War II organization, and was based on fundamental OSS principles."⁵ Allen Dulles, the first civilian director of the CIA, states in his *The Craft of Intelligence* that Truman based his establishment of the CIA on the controversial recommendations offered by Donovan before Roosevelt's death in 1945, and that "much of the knowhow and some of the personnel in OSS were taken over by the Central Intelligence Agency."⁶ In fact, in 1949 one-third of the CIA's personnel had previously served with OSS.⁷ In its first year, however, the agency was so intelligence-oriented that people with World War II "special operations" experience were not recruited. But by the latter part of 1948, a growing number of former OSS personnel with guerrilla warfare experience had joined the intelligence agency. That influx continued throughout the 1940's, and when the Korean war began, even more former OSS personnel joined the CIA.⁸

The CIA's first years were also influenced by the preoccupation of US policymakers with the Soviet threat, a preoccupation that is difficult to exaggerate. The impetus of the cold war provided an environment of fear that fostered renewed interest in psychological and unconventional warfare. As the Senate Select Committee's report on intelligence activities states, "Decisions regarding US sponsorship of clandestine activities were

gradual but consistent, spurred on by the growing concern over Soviet intentions."⁹ Finally, the growth of the Office of Policy Coordination was important, for it was this part of the CIA with which the Army would have to interact most as it groped to develop its own capability for psychological and unconventional warfare.

Army Demobilization

During 1945-46, Army psychological warfare staffs and units dissipated with the general demobilization of the military establishment. To be sure, a few senior officers recommended that the Army profit from its experience in that relatively new field. In December 1945 Major General Lemnitzer urged that the Army remember its wartime lessons and develop a psychological warfare capability for the future. He also recommended that the service schools include instruction "to provide future commanders and staff officers with a general understanding and appreciation of this new weapon of warfare."¹⁰

General McClure, the key World War II figure in Army psychological warfare, echoed the sentiments expressed by General Lemnitzer in a letter to the Propaganda Branch, War Department, in early 1946: "I urge that a comprehensive document on the subject of psychological warfare be produced and used in the National War College and the Command and General Staff School." McClure concluded by pronouncing the following verdict: "The ignorance, among military personnel, about psychological warfare, even now, is astounding."¹¹ And at a higher level, the Chief of the JCS Historical Section, Major General E. F. Harding (USA), recommended in February 1946 that the JCS employ a civilian professional to write a history of World War II psychological warfare. To make his point about the necessity of such a study, Harding reminded the JCS that the Army's World War I experience in this activity had not been recorded, and argued the importance of psychological warfare in modern total war.¹² Despite these entreaties, the nation longed for prompt return to normalcy. The military services, faced with the problems of rapid demobilization, gave little attention to the relatively minor subject of psychological warfare.¹³

Some Army personnel did, of course, have grave reservations about Soviet intentions, even though the U.S.S.R. had been a major ally in war. As a Senate report on US intelligence activities states, "American military intelligence officers were among the first to perceive the changed situation."¹⁴ In a lengthy letter written in January 1946, Major General W. G.

Wyman, the G-2 of Army Ground Forces (AGF), prefaced his views on the ideological threat, both domestic and international, posed by the U.S.S.R. with this statement: "The confusion of mind and the inconsiderate thinking of the soldiers of the Ground Forces in the United States is illustrative of similar thought which exists amongst troops of occupation and the civilian population of the United States." Alarmed about the problems associated with demobilization, he asked rhetorically, "Where is the mental penicillin that can be applied to our loose thinking to insure the wholesome thought that is so urgently needed in our country today?" Launching into a comparison of communism and democracy, he outlined several areas of the world under Soviet domination or pressure—"the tentacles of communism"—and then addressed the domestic scene: "Our troubles of the day—labor, demobilization, the discontented soldier—these things are the sores on which the vultures of communism will feed and fatten."

Having given an overview of the ills, Wyman then turned to his prescription:

There must be some agency, some group either within or outside our national security forces, which can interest itself in these matters. There must be some weapon by which we can defend ourselves from the secret thing which is working at our vitals—this cancer of modern civilization. . . . A new government policy is desperately needed to implement the psychological effort indicated. . . . We must combat this creeping shadow which is in our midst.

General Wyman concluded his letter by urging that the War Department, "in the interest of national security," recommend to the President that:

1. Federal intelligence agencies concentrate on collecting information on activities subversive to our government at home and abroad.
2. A government agency be selected to wage a psychological war against these activities.
3. A policy be established to publicize such subversive activities and expose them to our people.¹⁵

This remarkable analysis vividly portrays the mood of the times. While General Wyman's views may today appear somewhat extreme, in 1946 they represented the genuine concerns and fears of a segment of American society, both in and out of uniform. A larger part of the population, however, desired peace and a return to normalcy, and it was these

conflicting pressures that policymakers struggled with in the immediate postwar period. Those same conflicting pressures also affected the evolution of psychological warfare in the Army.

Psywar to Plans and Operations Division

In May 1946 the Intelligence Division, G-2, began work on a recommendation that War Department responsibility for psychological warfare be moved from G-2 to a special staff division created for this activity. However, both the Chief of Information, Major General M. S. Eddy, and the Director, Plans and Operations (P&O) Division, Major General Lauris Norstad, felt that such a special staff division was not justified in peacetime, so the recommendation was withdrawn in late June. General Norstad did express the view that his division should be responsible for the planning and policy guidance for psychological warfare, but only if the propaganda branch personnel from G-2 were transferred to him with the function.¹⁶

At the same time, General McClure, who was in Germany as Director, Information Control, responded to a request from Colonel D. W. Johnston, Chief, Propaganda Branch, for his recommendations about the proper place for psychological warfare agencies "within the staff structure of all appropriate echelons." Using his wartime experience as an example, McClure argued strongly that psychological warfare should not be under G-2:

A great part of my difficulty in carrying out what I felt was my mission was with G-2. The G-2's all felt that they had a monopoly on intelligence and were reluctant in the earlier stages to give any of that intelligence to Psychological Warfare knowing that it would be broadcast or used in print.

He believed that an association of psychological warfare with G-3 would be more productive: "My greatest contacts were with G-3 and it was with the operational phases and even long-range operational plans . . . that I feel we did our best work."

McClure's clear preference, however, was for a separate, special staff section:

I am firmly convinced that an activity as important and as ramified as Psychological Warfare is one which should have the personal attention of the Chief of Staff and that the Director of Psychological Warfare should likewise have access to the Chief of Staff and even to the Commander himself.

Here General McClure found the opportunity to promote one of his favorite themes:

I had that relationship with the Chief of Staff and the Supreme Commander [Eisenhower] throughout the war and even then it was not as satisfactory as it should have been because of our failure in peace-time to indoctrinate Commanders and Staff Officers with the capabilities and limitations of Psychological Warfare.

He concluded by recommending again that "Psychological Warfare be a separate Staff Section reporting directly to the Chief and Deputy Chief of Staff with the closest liaison with the G Sections as well as with other Special Staff Sections."¹⁷ (It was to be another four and a half years before the special staff section that McClure recommended would come to fruition on the Army Staff, and he would be its first head.)

Colonel Johnston realized that any attempt to create a special staff section for psychological warfare at that time would be futile. Nonetheless, he attempted to move the function out of the Intelligence Division. On 22 August 1946, he recommended the establishment of a "Psychological Warfare Group" under Plans and Operations (P&O) in the War Department General Staff (WDGS). Relying heavily on General McClure's arguments, Johnston emphasized that psychological warfare was "primarily operational in nature and does not fall readily within the scope of the Intelligence Division." Perhaps the most interesting aspect of Johnston's rationale for his proposed change was his belief that the new line of authority would eliminate future interference by civilians:

In the event of a future emergency, while overall political and psychological warfare policies will stem from the White House and the State Department, the existence of a nuclear organization within the War Department possessing a complete plan for military psychological warfare and the technical means for implementation, would avoid the situation of World War II, wherein theater commanders had thrust upon them civilian agencies to conduct psychological warfare within their theaters, with resultant conflict of authority and lack of control over training standards and performance.¹⁸

Here again we see evidence of the resentment that many regular officers felt toward what they considered unwarranted civilian interference.

A decision on Colonel Johnston's recommendations was delayed until October, and it probably differed from what he had envisaged. The original paper had picked up some additional facets, and what the Acting Chief of

Staff approved on 3 October 1946 was a series of War Department recommendations to the State-War-Navy Coordinating Committee (SWNCC) "to give early consideration to, and make prompt recommendations concerning Psychological Warfare Policy," and to "consider informing the U.S. public of foreign subversive activities within U.S."¹⁹ In those recommendations, particularly those concerning subversive activities, the influence of General Wyman's January letter can be seen. With regard to the initial recommendation to establish a Psychological Warfare Group in P&O, however, the decision was that certain psychological warfare operations would be moved to other divisions and agencies, but that P&O would provide overall planning and policy guidance.²⁰

Some footdragging followed until, during an informal conversation on 6 November 1946 between General Hodes and General Lincoln, General Hodes agreed to take over immediately the psychological warfare functions of G-2 and to absorb its Propaganda Branch.²¹ The Propaganda Branch was formally discontinued by Intelligence Division Memorandum No. 100 on 29 November 1946, and the branch personnel assigned to the Policy Section, P&O.²² A minor era in the evolution of War Department bureaucracy thus ended. Psychological warfare, which from 1941 had been a G-2 responsibility, passed to the operations side of the house.

Actually, the responsibility for psychological warfare had been diluted in the process. While War Department Memorandum No. 575-10-1, issued on 10 January 1947, charged the Director of P&O with the responsibility for general supervision of Army psychological warfare activities, several other War Department agencies were given pieces of the pie. These included the Director of Intelligence, who retained responsibility for collection, evaluation, and interpretation of sociological and psychological information, and the analysis of foreign propaganda; the Director of Organization and Training; the Director of Service, Supply, and Procurement; the Director of Research and Development; and the Chief of Public Information.²³ Real centralization of psychological warfare activities did not occur until January 1951, when the Office of the Chief of Psychological Warfare (OCPW) was formed, with General McClure as its head.

Eisenhower and McClure

At about the time that responsibility for psychological warfare passed to P&O, some interest in the field emerged at a higher policy level. Apparently initiated by the interest of Secretary of War Robert Patterson, dis-

cussions about covert operations as a future form of war took place in SWNCC. As an offshoot, in December 1946 an SWNCC subcommittee formulated guidelines for the conduct of psychological warfare in peacetime and wartime. Then, in April 1946 an SWNCC subcommittee was formed to plan psychological warfare; in June 1947 it was renamed the Special Studies and Evaluation Subcommittee.²⁴

In a memorandum dated 19 June 1947 Army Chief of Staff Eisenhower indicated to the Director of P&O his desire for the War Department "to take those steps that are necessary to keep alive the arts of psychological warfare and of cover and deception and that there should continue in being a nucleus of personnel capable of handling these arts in case an emergency arises."²⁵ At the same time, the former World War II Supreme Allied Commander asked his former Chief of the Psychological Warfare Division, SHAEF, for comments on the subject.

McClure emphasized in his reply that "psychological warfare must become a part of every future war plan." He lamented the dispersion of people with World War II experience, and specifically recommended that:

1. A mixed civilian-military group, on a voluntary basis, be charged with studying psychological warfare policies and practices during this war.
2. Research be undertaken, at once, into the effectiveness of PW (psychological warfare).
3. A PW Branch of the Director of Information be established.
4. A PW Reserve, of limited number, be established.
5. Training for PW be undertaken at the General Staff College and the National Defense College.²⁶

In light of the strong views that he had expressed earlier about the desirability of a Special Staff section for psychological warfare, McClure's recommendation to put this function under the Chief of Information appears strange. Perhaps he had decided that such a proposal was futile because of the previous resistance to this idea shown by the War Department staff. Perhaps his post-World War II experience in information had convinced him that this was the proper course. As he explained in his memorandum to Eisenhower: "It [psychological warfare] is more than intelligence; it is more than operations . . . it is information—secured and disseminated to friend and enemy."²⁷

Little resulted from General McClure's recommendations. According to the Director of P&O in the staff reaction requested by Eisenhower, General McClure's first two recommendations had been followed: A civilian historian, Dr. E. P. Lilly, had been employed by the JCS to write a history of psychological warfare for World War II. But the War Department staff believed that the responsibilities for psychological warfare should remain as outlined in War Department Memorandum 575-10-1, and not be a function of the Chief of Information. Nor was the establishment of a psychological warfare reserve believed practical. With regard to McClure's final recommendation, the Director of P&O, General Norstad, simply replied that the subject of psychological warfare was included in the curriculum of the National War College, the Command and General Staff College, and the Air War College.²⁸

Another senior officer who was unhappy with the progress of US psychological warfare was General Wyman. He wrote to General Norstad on 14 June 1947, and, with his usual intensity, declared, "I believe that the SWNCC group that has been set up is not sufficiently powerful to accomplish the urgent national requirement in this field. Such a group must have no diverting duties to take them away from this very extensive subject which is so important to us." He went on to state that a national psychological warfare objective must be established, and that the Army needed an interim directive so that it could "bring an aggressive program to bear on appropriate objectives without further delay." He concluded by reaffirming the necessity for action at the highest level: "I am convinced that a national agency must be set up, using SWNCC perhaps, but stirred up and goaded far beyond any present concept to immediate action."²⁹

In his reply, Norstad agreed on the need for a national agency, but reminded General Wyman that the overall direction and control of peacetime activities was primarily a State Department function. He informed Wyman that two officers from P&O were members of the SWNCC Subcommittee on Psychological Warfare, which was primarily a contingency planning organization that should not engage in the day-to-day business of "selling democracy." He proceeded to draw a distinction between the peacetime activity of "selling democracy," an information function, and "psychological warfare," which "should apply only to wartime or pre-belligerency and have as its frank objective the coercion as well as the provision of thought."³⁰ Wyman agreed with Norstad's distaste for the term "psychological warfare," but felt that there was "a great need for a synonym which could be used in peacetime that would not shock the sensibilities of a citizen of democracy."³¹

The problem was not new. During World War II, agency differences over "open," "white," or "overt," as opposed to "closed," "black," or "covert" propaganda had been a source of continuing difficulty. In fact, those differences had been one of the primary factors in the dissolution of COI and the division of psychological warfare responsibilities between OWI (overt) and OSS (covert). But this was a new kind of war—a "cold war"—in which most Americans desired peace. Many military men wanted to have nothing at all to do with psychological warfare; it was not "real soldiering." Even those who felt that psychological warfare was important were understandably perplexed about the proper role of the military in this multifaceted and unorthodox activity. The correspondence between General Norstad and General Wyman mirrored the dilemma faced by concerned professionals.

Norstad asked the Chief of Information, General Eddy, for his informal views on this sensitive subject. Eddy's reply, in a lengthy memorandum written in October 1947, provides some valuable insights. He began by concurring "in the need to undertake without delay an extensive campaign of psychological warfare, in both overt and covert phases, as a matter of national necessity to offset the effectiveness of the growing PW campaign launched against the United States by the U.S.S.R." But then he discussed the importance of carefully presenting such a campaign to the American public and the role of the military in such an effort:

Although the success or failure of such a PW campaign will be of the most vital military concern, the political structure of the U.S. precludes making PW a military effort. In fact, the political considerations are so sensitive in this field that the whole program may be defeated at its inception—no matter who assumes the initiative—if the entire question of ways and means of broaching the subject to the President, the Congress, the people—particularly the press—is not minutely examined by the best brains available and handled with the utmost tact, finesse and discretion. Otherwise, the American people and the Congress will misunderstand and disapprove the project at the outset.

Eddy believed that covert psychological warfare would not be accepted by the American people "without a great deal of preliminary education and groundwork," and emphasized that it should be conducted "under the aegis of an agency not directly connected with the armed forces." On the other hand, the public and Congress would probably accept overt psychological warfare, but only if they were fully informed as to its need and methods. That, Eddy said, would require the voluntary cooperation of the

information media. Terms such as "psychological warfare," "propaganda," and "subversion" would have to be carefully explained "so as not to arouse public indignation or fear of 'gestapo-ism' and authoritarianism in our own country." And as for the military's role in this endeavor, Eddy thought that "the entire subject should be sponsored by civilians—not members of the military establishment—both in and out of the government. Publicly recognized military participation should be limited to advice, concurrence, and such performance as may be delegated to it."³²

General Eddy's views vividly portray the murky and politically sensitive area that was psychological warfare in the early years of the cold war. The extreme caution he advocated undoubtedly contributed to the ambivalent attitudes of many senior Army officers toward this "grey area" activity during the interwar period.

General McClure, however, was not ambivalent, and rarely missed an opportunity to press for a strong Army role in psychological warfare. Responding to a request from Eisenhower for a small number of civilian candidates for a psychological warfare reserve, McClure in early November 1947 recommended a group of eight for policy planning and outlined how they could be used. He then added:

Although activities of this group would have to be coordinated with other armed services and with the State Department, it appears to me that the Army is privileged to take the initiative in securing U.S. Government coordination of Psychological Warfare activities since the Army is the principal implementing agency in four occupied countries and a contributing agency through its Military Attache and Military Mission systems.³³

McClure was correct; the Army was heavily involved in civil affairs, information control, and "reorientation" activities in several occupied countries. No one was more aware of that than the former Chief of PWD/SHAEP, who had left that position after the war to become Director of Information Control in Germany, and who was, at the time of this memorandum to Eisenhower, Chief of the War Department New York Field Office, Civil Affairs Division.

One of the men recommended by McClure for the psychological warfare reserve group was William S. Paley, Chairman of the Board of the Columbia Broadcasting System. Paley came to see General Eisenhower shortly after the McClure memorandum and expressed his willingness to help in psychological warfare planning, but said he preferred to do so as a

civilian consultant rather than in uniform. In a memorandum to Secretary Forrestal, Eisenhower agreed with Paley's preference "inasmuch as the sense of the discussion among interested agencies has been to the effect that civilians should control and predominate in the current organization and planning."

Thus having established his acceptance of civilian leadership in psychological warfare planning, Eisenhower then made a case for a strong role for the military in the ongoing process:

I realize that there are high-level committees considering the subject, but it seems to me that the military must give continued impetus to the organization and realistic functioning of this important activity. Further, the Armed Services should prepare plans now involving enunciation of policy and methods applying to actual war.

The argument for a military role in psychological warfare planning made, Eisenhower tactfully suggested that the Army, and specifically his former PWD/SHAEP chief, could provide the necessary leadership:

I do not know whether the responsibility for this planning should be referred to the JCS or to an ad hoc committee under your immediate supervision. In the latter event, I could, if you so desire, detail as the head of a combined committee, a brigadier general (Robert A. McClure) who had extensive experience in this field during the war in Europe. He was closely associated with Bill Paley and others of similar qualifications. He is therefore in a position to crystallize the experience and knowledge acquired during the past war and should facilitate the development of a workable plan for the future employment of psychological warfare under conditions of actual war.

Ever the diplomat, Eisenhower closed his memorandum to the Secretary with supreme tact: "This note has no other purpose than to express readiness to be helpful. If the matter is completely in hand through the processes of the high-level committees, my suggestions may not be pertinent."³⁴

The Chief of Staff's offer was not accepted, and McClure stayed at his post in New York. Nonetheless, Eisenhower's interest in psychological warfare was evident, and it was equally evident that Robert A. McClure carried some weight with the Chief. But the Army continued to feel its way gingerly in this ambiguous and politically sensitive field.

The Army's Reaction to NSC-4

The task of delineating agency responsibilities for psychological warfare proved difficult. In early November 1947, the Secretaries of Defense, the Army, the Navy, and the Air Force determined with the JCS that all propaganda—both overt and covert—should be a function of the State Department, in consultation with the CIA and a military representative. Accordingly, President Truman assigned psychological warfare coordination to the Secretary of State on 24 November, a decision that was reversed within 3 weeks. Secretary of State George Marshall opposed taking responsibility for covert actions that might embarrass the Department and discredit US foreign policy. He favored placing covert activities outside the Department, but still subject to guidance from the Secretary of State. Similarly, the military wanted to maintain some control over covert psychological activities without assuming operational responsibility. Unwilling to risk association with covert activities, the Departments turned to the CIA.³⁵ The result was NSC-4, entitled "Coordination of Foreign Intelligence Information Activities," a directive that in December 1951 "empowered the Secretary of State to coordinate overseas information activities designed to counter communism," and an annex, NSC-4A, which "instructed the Director of Central Intelligence to undertake covert psychological activities in pursuit of the aim set forth in NSC-4."³⁶ Shortly thereafter, on 22 December, the Special Procedures Group was established within the CIA's Office of Special Operations to carry out such covert operations.³⁷ Thus, responsibility for covert psychological warfare was fixed, or so it appeared. But much needed to be done to define agency responsibilities for the overt side.

The Army's first reaction to NSC-4 was an attempt to get its own house in order. A study was initiated in January 1948 "to determine what steps are required to strengthen and coordinate all domestic and foreign information measures of the Department of the Army in furtherance of the attainment of U.S. national objectives in compliance with NSC-4 and existing regulations." The study discussed the "insidious and destructive" Communist propaganda that "directly threatened" U.S. national security; advocated strong counterpropaganda measures, both foreign and domestic; and declared that "inasmuch as the use of propaganda as a *weapon* of either war or peace is of fundamental concern to the Department of the Army, it is believed imperative that Army efforts in this field be coordinated and directed."

An assertive posture was taken regarding the sensitivity of psychological warfare:

The fact that the American people and Congress do not like and/or are afraid of domestic propaganda, is no excuse for us to sidestep our responsibility. The responsibility of accepting the consequence of doing nothing is far greater. The American people have proved too many times that they can "take it" if they are told why.

The study also contained a lengthy discussion of opinion surveys from World War II—a cause for concern because they indicated "a lack of psychological conditioning of the soldier's mind before going to war." Thus the wish: "If the Army could engage in 'white' propaganda for civilian consumption, it would be beneficial as prior indoctrination of the future power of Army manpower."

The study emphasized that three Army Special Staff Divisions—Civil Affairs, Public Information, and Troop Information and Education—were engaged in dissemination of "white" propaganda, but that their efforts were uncoordinated. Furthermore, there was "little or no policy guidance or general supervision from P&O Division," as specified by War Department Memorandum No. 575-10-1, issued in January 1947. Since the study was prepared by Colonel Yeaton of P&O, the last conclusion was a rather candid and surprising admission.

In any event, to remedy the situation described, the study recommended the following:

That the Chief of Information be directed to supervise all current operations of the Department of the Army in the field of information, public relations, or education which have psychological or propaganda implications.

That all "white" propaganda, domestic and foreign, implemented by the Department of the Army and disseminated by the three (3) Special Staff Divisions (Civil Affairs, Public Information and Troop Information and Education) be coordinated by the Chief of Information.

That for psychological warfare or propaganda purposes, the Chief of Information receive policy guidance from the Director of Plans and Operations Division through appropriate and continuous liaison.

The Chief of Information agreed with the recommendations, but believed strongly that P&O should coordinate the overall psychological warfare effort. He also cautioned against casting the Chief of Information in a psychological warfare/propaganda role. P&O concurred with this, but saw "no danger if handled as suggested." On 18 December 1948, the study recommendations were approved by the Secretary of the Army.³⁸

As we have seen, the Army's first reaction to NSC-4 produced little in the way of far-reaching measures, but rather an attempt to improve internal coordination of psychological and information activities. Those modest steps indicated the crosscurrents of uncertainty and caution, on the one hand, and a desire to "do something" about a perceived condition of national malaise and weakness, on the other. They reflected a sense of frustration by some with the lack of strong national direction in psychological warfare, and a feeling of uncertainty about the Army's leadership role in this politically sensitive area.

Another interesting facet of the Army's action was General McClure's role. Colonel Yeaton, who prepared the study for P&O, apparently felt that it was important to note for the Chief of Staff that the paper had been presented to McClure, "who gave complete concurrence."³⁹ Even from his office in New York, then, General McClure continued to influence the Army's thinking on psychological warfare.

McClure's influence continued to be felt at all levels of psychological warfare. A memorandum for the new Chief of Staff, General Omar Bradley, written in March 1948 by Lieutenant General A. C. Wedemeyer (who had replaced Norstad as Director of Plans and Operations), gave some indication about McClure's stature:

In the last war this activity [psychological warfare] was not promptly or efficiently developed. Organization and functions were accomplished under duress. During the course of the war, many men became quite proficient in this unusual, but very vital work. I believe that Brigadier General Robert A. McClure should be brought to the War Department for consultation in the premises.⁴⁰

The followup memorandum to that paragraph by the Assistant Chief, Plans and Policy Group, P&O, confirms the key role of McClure in policy matters:

General McClure visited Washington before and after his trip to Europe. On the occasion of each visit, he spent considerable time in Policy. He was consulted on the provision of SANACC 304/6 and his recommendations are embodied in JCS 1735. He edited and approved our psychological warfare study now in the hands of the Joint Planners.

General McClure now feels that close liaison has been established between P&O and himself. He has been of great assistance in the past, and his opinion will be sought in the future on all major psychological warfare issues.⁴¹

Further evidence of McClure's stature—and his close relationship with General Wedemeyer—was a June 1948 "Dear Bob" letter from Wedemeyer, thanking General McClure for his comments on an Army pamphlet entitled "Tactical Psychological Warfare" to be used at the Ground General School at Fort Riley:

Your constructive views make it possible to improve these training publications. I hope that we can send similar material to you in the future, in order to obtain the continued benefit of your knowledge and experiences. Furthermore, I trust that you can find time to put down on paper more of your experiences and reflections on the broader aspects of psychological warfare, because we find ourselves short of seasoned, mature Army writing in this field.⁴²

Switching to a higher policy level, McClure, in a "Dear Al" letter to General Wedemeyer in July 1948, laid out in considerable detail his concerns and recommendations for psychological warfare. He began by addressing a recent conversation with General Omar Bradley, who appreciated the value of psychological warfare during wartime but apparently felt that the Army should confine itself to planning and leave overall responsibility to the State Department. McClure had some misgivings about this approach:

I am sure few people realize that today the Department of the Army is the foremost U.S. propaganda agency of our Government. Why, and how come, would require involved explanation to the uninformed. You and I know the answers. By default, State Department has not taken over its responsibilities in this field for many reasons—particularly appropriations.

Having stated his major theme, McClure supported it by presenting a tour d'horizon of the Army's activities. The Armed Forces radio networks, the *Overseas Stars and Stripes* newspaper, the Troop Education and Information program in Europe and the Far East, the Army's "complete responsibility for the propaganda to four occupied countries," the fact that the Army controlled more worldwide radio broadcasts than the State Department, the US Military Government newspapers published in 3 foreign countries, the 50 to 75 documentary films distributed each year, the world newsreels made in 3 languages each week, the control of all US commercial films shown in occupied countries, the cultural centers established in 60 cities of the occupied areas, the magazines published for foreign distribution ("We, the Army publish five while State publishes one") and the millions of pamphlets and leaflets printed for educational purposes in 4 occupied countries—all of this, and more, prompted McClure

to declare, "I should say today that the Army has five times the outlet for projection of America that State has and probably a greater audience for its propaganda."

McClure also declared that the Army should not take a head-in-the-sand attitude about these activities, because, "Call it what you may, international information, propaganda, or psychological warfare, the responsibilities still rest with us." The responsibility for directing and coordinating propaganda was in line with clearly established US Government objectives and could not be ignored, but, McClure wrote, there was "no Army or National Defense Agency doing so." McClure used his own office—which was responsible for a sizeable portion of the program in occupied areas—to illustrate the lack of central direction and coordination: "In the year I have been in charge of the New York Field Office of Civil Affairs Division there has never been a conference outside of my own office on propaganda policy." That last statement startled someone—perhaps General Wedemeyer—for the handwritten exclamation "Wow!" appears next to it.

Continuing to beat the drum, McClure acknowledged that NSC-4 was a step in the right direction, but that "a great need for unity of purpose and central direction remained." With a touch of assertive pride, McClure added: "The Army has taken a major interest in this field and should be privileged to take the lead, if necessary."

Having laid his foundation, McClure then summarized his pleas to the Director of Plans and Operations:

The whole purpose of this letter to you is to urge:

1. recognition of the responsibility of the Army;
2. an organization in being within the National Defense setup to carry on the operations which the Army has assumed;
3. an organization to plan for and further psychological warfare;
4. a study of Psychological Warfare—its capabilities and shortcomings;
5. utilization of those willing, experienced civilians, who are anxious to help a future Psychological Warfare organization.

Two pages of specific recommendations followed, including one for a national organization to handle both black and white propaganda ("the present separation of black and white propaganda between State and CIA is basically unsound.") Others addressed technical research and various studies needed, psychological warfare instruction for service schools, ways to improve the Reserve program for psychological warfare officers, and, an old theme, the "indoctrination of commanders in the capabilities and limitations of propaganda in warfare."

Apologizing for a lengthy letter, McClure closed by saying that he had written a personal, rather than official, communication since "much of this is outside of the field of my official responsibility."⁴³

It was, in fact, an amazing letter, particularly since it was written by a man who admitted that much of what he wrote was outside his "official responsibility." In terms of breadth, scope, and imagination, it was one of the most comprehensive personal communications on the subject of psychological warfare written by an Army officer during the interwar years.

General Wedemeyer acknowledged McClure's dedication and expertise with a thoughtful, but delayed, reply in September: "I am deeply grateful, Bob, for your fine letter and the inclosures. I realize that you are unquestionably our outstanding authority on this very important subject, psychological warfare, and feel deeply indebted for your contribution." As a sidenote, he mentioned that Frank Wisner, Director of CIA's newly created Office of Special Projects (later renamed Office of Policy Coordination), had recently asked about the possibility of McClure "joining up with his team" because he recognized that "you are perhaps the most knowledgeable and experienced officer in the game."⁴⁴ McClure did not do so, however, and there is a certain irony in this minor episode in view of the conflicts that later arose between Wisner's "team" and that of General McClure as Chief of the Army's Office of Psychological Warfare in the early 1950's.

The essence of Wedemeyer's response to McClure's main argument for recognition of the Army's responsibilities and the need for a national psychological warfare organization was that the situation was out of the Army's hands. Until the NSC decided on several proposals before it for such an organization, he replied, not much could be done about policy, nor could Army plans for psychological warfare be made firm.⁴⁵

Actually, Wedemeyer had given the subject more thought than his response to McClure may have indicated. In early August he had written

a memorandum to General Bradley, the Chief of Staff, to offer "a few of my thoughts" on psychological warfare:

Thus far in our planning, both within the Joint Staff and in P&O Division, we have been inclined to think of psychological warfare as a means which we should develop for giving further effect to strategic plans already developed. That is, we have considered it desirable to draw up a "psychological warfare annex" to each strategic plan. I am now inclined to think that this may be an unsound approach. It restricts psychological warfare activities within the narrowed limits of the strategic operations already determined without due consideration of the psychological problem.⁴⁶

This was an important insight. What Wedemeyer was suggesting was that psychological warfare should be integral to the strategic planning process, rather than an afterthought to those plans. The lack of understanding by senior commanders and staffs of the crucial distinction between those two approaches has historically plagued the work of psychological warfare planners. Wedemeyer's tentative recognition of this conflict represented an important doctrinal advance, but one that was not always adhered to by his successors.

With that thought as background, Wedemeyer outlined for Bradley "a new approach" that the P&O was prepared to initiate:

1. We will select a small group of experienced, forward thinking, young planners and assign them the task of developing in broad outline a war plan based on the following single war objective: to cause the people of Soviet Russia to overthrow their present totalitarian government and to render them maximum practicable assistance in this undertaking.
2. It is expected that such a plan will develop to the greatest possible extent the full capabilities of a psychological warfare approach. It may produce a radically different scheme of military operations from that contemplated under the HALFMOON concept.
3. When this plan is developed, if it appears to have sufficient merit, we will then suggest that you present it to the Joint Chiefs of Staff for joint consideration.⁴⁷

Despite its grandiose objective, Wedemeyer's proposal offered another important insight: the importance of assessing, and perhaps acting upon, the potential psychological vulnerabilities of a society.

Bradley's response was guarded, stating that while the proposal was "a good idea," it "might be impracticable as a line of action, but on the other hand it may not." He conceded that, in any event, "it would furnish some ideas for modification of HALFMOON." There is little indication, however, that much resulted from Wedemeyer's proposal, partly because he was unable to pry away from other divisions the caliber of planners needed for the task envisaged.⁴⁸

While not enough to satisfy some like General McClure, some work had been done in Army psychological warfare, both at the staff level and in the field. In June 1947, based on a directive from the Director of Organization and Training, WDGS, an experimental "Tactical Information Detachment" had been activated at Fort Riley, Kansas. The detachment sent teams, equipped with loudspeakers and leaflets, to participate in Army field maneuvers in the continental United States, the Caribbean area, and Hawaii. (The Tactical Information Detachment was to be the only operational psychological warfare troop unit in the US Army when the Korean war erupted in June 1950.) Studies were started by Headquarters, AGF, for a cellular combat propaganda unit to replace the mobile teams of the MRB companies used in World War II. Psychological warfare extension courses were prepared by the Army General School at Fort Riley, primarily for specialists in the Military Intelligence Reserve.⁴⁹

In September 1948, at the Department of the Army, P&O prepared a "tentative Psychological Warfare Plan (Army)" for wartime, which included estimates of Special Staff personnel needed at theater, army, and corps levels, as well as operating personnel needed to serve tactical units down to the level of regimental combat teams. Staffing of this tentative plan followed, but in late December 1948 it was determined that "no action is required or possible since, until higher authority has determined the degree of Army responsibility in PW [psychological warfare], the degree of Army need for TO&E units cannot be determined."⁵⁰ At the end of 1948, then, the Army was still gingerly feeling its way, waiting for "higher authority" to decide the extent of its role in psychological warfare.

In early 1949 some movement to provide for national overt psychological warfare planning began. In February, the NSC agreed that an organization for the peacetime planning of overt psychological warfare should be established within the State Department and directed the NSC staff to prepare a proposed directive on the subject. The directive established an organization consisting of a director appointed by the Secretary of State, consultants from the other agencies, as well as liaison from the CIA. The organization was to be charged with planning and preparation

"for the coordinated conduct of foreign and domestic information programs and overt psychological operations abroad in the event of war or threat of war as determined by the President." A similar planning function previously assigned to the SWNCC Subcommittee on Special Studies and Evaluations was to be terminated, according to the directive. While there was some disagreement among the military services about certain revisions to the proposed directive, they were resolved—at least initially—to support it in the interest of expediting the action. As General Maddocks (who had replaced General Wedemeyer as director of P&O) penned on a memorandum to the Deputy Chief of Staff for Plans and Combat Operations, General Wedemeyer: "P.S. The important underlying factor in this matter is to get started. The directive can be amended as need therefor arises, after the group starts work."⁵¹ To this, General McClure undoubtedly would have added, "Amen!"

The Carroll Report

One reason the Army moved rather hesitantly in psychological warfare was that the Secretary of the Army, Kenneth C. Royall, was himself concerned about Army involvement in this activity. He definitely opposed any association with covert operations, stating in June 1948 that he did not want the Army "even to know anything about it."⁵² However, through the combined efforts of two civilian members of his staff—Under Secretary William H. Draper and Assistant Secretary Gordon Gray—and General Wedemeyer, Royall gradually relented at least to the point of allowing more participation by the Army in overt psychological warfare.

Under Secretary Draper started the ball rolling by employing a civilian consultant, Wallace Carroll, to prepare a study about the Army's role in current psychological warfare activities. Carroll's study, forwarded to Draper on 24 February 1949, recommended that a separate "unit" be established to take charge of the Army's psychological warfare responsibilities. The "unit" would be headed by a general officer or qualified civilian, who would coordinate with the Deputy Chief of Staff for Plans and Operations (who at this time was General Wedemeyer).⁵³

Apparently, Draper made the results of Carroll's study available to Secretary Royall, because in a subsequent discussion between General Wedemeyer, the Secretary, and Assistant Secretary Gray, Wedemeyer reported that "Mr. Royall has changed somewhat in his view in that he accepts that we in the Department of the Army must participate a little; in fact, it was pointed out to him by Mr. Gray that we are actually

participating in Europe. Mr. Royall wants this activity under a civilian Secretary and has designated Mr. Gray to supervise same."⁵⁴

In this report to the Chief of Staff, General Bradley, Wedemeyer stated that Gray subsequently asked him (Wedemeyer) to propose to the Secretary an organization with Gray as head, a civilian assistant for psychological warfare, and a group of 8 to 10 officers in the Plans and Operations Division. Wedemeyer concluded by reminding the Chief that "Mr. Royall is very desirous that the uniformed services should not be involved too much in psychological warfare, but he does accept certain limited responsibilities in the Department." The Deputy Chief of Staff for Plans and Operations apparently thought that even this lukewarm endorsement represented progress since Royall had told him a year earlier that "the Army would have no part in psychological warfare and he admonished me definitely not to participate in such activity."⁵⁵

Responding promptly to Gray's request, on 17 March 1949 General Wedemeyer forwarded to Secretary Royall the following memorandum:

1. Mr. Gordon Gray asked me to discuss Psychological Warfare with Mr. Carroll, a civilian consultant, whom Mr. Draper employed to investigate realistic and minimum Army participation. Mr. Carroll prepared a study which I have analyzed carefully. Further, I talked to officers who have had experience in the psychological field.
2. Last Saturday Mr. Gray and I had a discussion concerning Army participation that would be acceptable to you, and also that would insure a realistic and yet not embarrassing role for the Army.
3. I recommend that Psychological Warfare be supervised by Mr. Gray as a responsibility of his office. A small group of officers could be located in P&O where they would coordinate with the International Group and the Strategic Planning Group of that Division of the General Staff. Mr. Gray should have a civilian assistant whose primary function would be to handle all psychological warfare matters for him and to maintain appropriate contacts with the State Department. This latter Department in the final analysis should be responsible for all Psychological Warfare matters of policy and for the coordination of Psychological Warfare activities. The Army should do nothing except with the cognizance and at the request of the State Department. I had hoped to talk to you personally about the above matter; however, the Joint Chiefs of Staff are in almost continuous session and it has not been possible to do so. Mr. Gray asked me a few days ago to express my views to you concerning this subject; hence this memo.⁵⁶

It was a masterful example of bureaucratic persuasion. Using the recommendation of an outside civilian consultant to pry an opening in Royall's opposition, Draper, Gray, and General Wedemeyer worked together to tactfully nudge the Secretary toward accepting some increase in Army psychological warfare planning. Royall's sensitivity on the subject undoubtedly influenced the Army's ambivalence toward psychological warfare. His resistance is the one notable exception during the period of this study of an important civilian Army official who adamantly opposed Army activity in psychological warfare. Indeed, the converse was more often the case; civilian officials frequently found it necessary to prod uniformed Army leaders into a greater effort in psychological warfare. Such was to be the case with Gordon Gray, who succeeded Royall as Secretary of the Army on 20 June 1949.

Gordon Gray—Revival of Interest

Not surprisingly, the emphasis on increased Army participation in psychological warfare urged upon Royall near the end of his tenure was continued by his successor. And with this apparent upswing in interest by the Army, again the advice of Brigadier General Robert A. McClure was sought. "Dear Bob," wrote the new Director of Plans and Operations, Major General Charles L. Bolte, on 7 July 1949:

You will recall that some time ago we talked briefly about the dissolution or disappearance of adequate planning for other measures in the field of psychological warfare, since the war. I recall that you expressed some concern over the fact that this matter was not receiving adequate, if any, attention on the part of the appropriate authorities, at least in the Military Establishment.⁵⁷

In view of McClure's consistent criticism to that effect since the end of World War II, this last assertion suggests considerable understatement.

Bolte continued:

I think that you will be relieved to know that the matter is being revived and that some measures are to be taken to restore us to a more adequate position. In that connection I have been asked to suggest, or secure the suggestions of, some names of possible candidates for appointment to a civilian position in the Office of the Secretary of the Army. I thought possibly you might have in mind the names of some appropriate individuals.

McClure, who by now had moved from New York to Fort Ord, California, to be the Assistant Division Commander of the 4th Infantry Division, answered Bolte promptly. Grousing about having received unexpected orders transferring him to the Northern Military District of Vancouver Barracks ("The orders gave me only one week to pack up and move which shows the consideration which the Army usually gives to the domestic side of life"), McClure nonetheless applauded the apparent resurgence of interest: "I am very pleased with the contents of your letter and to realize that the D of A [Department of the Army] is at last waking up to the importance of one of its major weapons—a weapon which can be used without repercussions of an atomic bomb category." He went on to recommend several candidates for the civilian position, providing a thumb-nail sketch of each person's qualifications.⁵⁸

McClure's letter was en route to General Bolte when, on 11 July, a meeting was held in the Secretary of the Army's office to report on the progress of psychological warfare organization within the Department of the Army. This much was clear: (1) a civilian "supervisor" for psychological warfare would be located in the Office of the Assistant Secretary, (2) a small working group for psychological warfare would be established in P&O, and (3) a nucleus of information operators would be formed in the Office of the Chief of Information.

What was not clear, however, was the relationship between the civilian "supervisor" and the team of officers in P&O. General Wedemeyer's understanding was that the civilian "should not be in a position of authority within P&O nor violate the chain of command . . . but should merely 'monitor' the PW [psychological warfare] functions of P&O along with PW functions of other components of the Department of the Army." The Secretary's understanding of the matter was quite different, as reported in Wedemeyer's memorandum for record:

Mr. Gray stated the matter more forcefully . . . [he] specifically indicated that the civilian "supervisor" was not merely to monitor but was to take a real part in the work concerning PW and he said, in essence, "if, as things develop, we run into a difficulty six or eight or twelve months from now, and if we *do* operate we are sure to run into a difficulty sooner or later, I want to be able to say that it was not just a military matter but that it was a fool civilian mixed up in it. I am thinking this way for the protection of the military."⁵⁹

Another interesting aspect of this meeting was the advice provided by Professor Paul Linebarger, a civilian consultant and author of a recently

published book on psychological warfare. Linebarger offered his views on desirable qualifications for the civilian "supervisor," suggesting that P&O could not fulfill its psychological warfare responsibilities unless the officers designated were assigned full time and given the opportunity for travel. General Bolte, Director, P&O, was reluctant to endorse this latter suggestion, indicating, "as he had indicated from time to time at other points in the conference, that the responsibility should be written out for P&O in full but that any external attempt to freeze or commit P&O personnel or structure would be unfortunate."⁶⁰

The 11 July meeting provides a valuable snapshot of the state of psychological warfare at the Department of the Army in mid-1949: Gordon Gray, only a month into his new office, intensely interested in psychological warfare and forcefully exerting his authority in terms of organization, yet also alert to the political sensitivity of the subject; General Wedemeyer and General Bolte, interested in the subject but wary about its effect on traditional concerns of chain of command and lines of authority, and perhaps slightly resentful of civilian influence in this field, especially when a myriad of more familiar "purely military" problems competed for their attention (for example, General Bolte's resistance to "external" pressures on him to dedicate officers solely to psychological warfare); Professor Linebarger, the civilian consultant, naturally anxious to see this specialized subject receive greater attention, and perhaps just a little impatient with the less-than-total endorsement of psychological warfare by military leaders. Such was the range of emotions and attitudes on psychological warfare, all of which combined to portray a picture of hesitancy and slow progress within the Department of the Army 11 months before the Korean war would erupt.

Because many Army leaders still considered psychological warfare a new development, such hesitancy is understandable. Even though the Army had used psychological warfare in World War II, the Director of Organization and Training in May 1949 lumped it together with atomic warfare, radiological defense, biological warfare, guided missiles, and subversive warfare as "new developments [of warfare] or modifications of previous developments." General Bolte, Director of P&O, thought it premature to parcel out responsibilities for these topics to specific General Staff agencies until their roles and uses were better understood. Instead, he recommended that all General Staff divisions designate contact officers for discussions of the developments under P&O monitorship.⁶¹

Further, military service schools also were giving little attention to the subject of psychological warfare. A student committee report prepared at

the Armed Forces Information School, Carlisle Barracks, Pennsylvania, in June 1949 concluded that there was no course in psychological warfare at any service installation adequate to provide the necessary knowledge for an Information and Education officer.⁶² The Ground General School curriculum at Fort Riley offered 9 hours of instruction, the Command and General Staff School, 1 hour; tentative and draft field manuals were being used in schools and for extension courses; no training programs for Reserves were available or planned—all of which led to the admission in a P&O memorandum on 4 October 1949 that “much remains to be done if the Army is to be ready to fulfill its operational and mobilization responsibilities in the field of psychological warfare.”⁶³

By early 1950, Secretary Gray was beginning to suspect the same. He decided to query the new Chief of Staff, General J. Lawton Collins (who had succeeded General Bradley in August 1949), with a memorandum on 7 February 1950:

As you know, I am keenly interested in the prompt and effective development of psychological warfare within the Army.

I should like to have a report on the status of this matter by February 15th.

In this connection, I am particularly interested in what consideration has been given to psychological warfare in conjunction with the current reorganization within the General Staff.⁶⁴

There was not much progress to report to the Secretary of the Army. The opening paragraph of “Report on the Army Psychological Warfare Program,” in fact, was a classic example of the type of bureaucratic gobbledegook often used to obfuscate an issue:

While definite progress has been made in the last six months in the development and execution of a psychological warfare program within the Army, much remains to be accomplished. The establishment of a sound, comprehensive program and the effective carrying out of the many tasks and activities under such a program includes the solution of many problems which are interrelated and the solution of which is dependent upon the sequential and systematic development and completion of the more fundamental aspects of the overall program. An effort has been made, however, to meet the higher priority requirements in all important areas of the program as developed to date.⁶⁵

Gray undoubtedly had to reread that paragraph, and even then probably wondered exactly what he had been told. In essence, the report stated that some progress had been made in operational planning, in the preparation of draft Tables of Organization and Equipment for troop units, and in nonmateriel research. Progress had been slow, however, in staff organization for psychological warfare, doctrine and techniques, personnel and unit training, training literature and training aids, materiel, and intelligence requirements. Most of the report, in fact, discussed problem areas and actions that needed to be taken. In this last category was the expressed need for a "school center for psychological warfare at which tactical doctrine, techniques, training literature and tactical studies can be prepared."⁶⁶ The Psychological Warfare Center, created almost 2 years later at Fort Bragg, would eventually fill that void.

Probably of greatest interest to the Secretary, however, was the report's statement that an increase in organization and staff personnel for psychological warfare would shortly be recommended—of interest, no doubt, because Gray had been waiting patiently since March 1949 for progress on this matter.

Finally, the report tactfully asked the Secretary to be patient and recognize the difficulties inherent in dealing with a new function: "For an appreciable period of time, the development and execution of a psychological warfare program will be essentially a 'pioneering' effort and will depend primarily upon initiative, constant direction, and follow-up provided by the General Staff and by Plans and Operations Division in particular."⁶⁷ The North Korean invasion was only 4 months away at the time of this report, and Gordon Gray was to leave his office within a month.

"Only a Start": Prelude to Korea

If the Army Staff thought that the new Secretary of the Army would lessen the pressure for more progress in psychological warfare, they were soon disabused of that notion. On 29 May 1950, within 5 weeks of replacing Gordon Gray, Frank Pace, Jr., sent the Chief of Staff a memorandum clearly outlining his interest in the subject:

1. On 7 February 1950, Secretary Gray requested a report on the status of psychological warfare development within the Army with particular reference to what organizational provision had been made within the Department of the Army for the direction and development of Army capability in this field. It is my understanding

that a plan to authorize the establishment of a Psychological Warfare Branch in G-3, Operations, and to provide adequate staffing was approved on the condition that spaces be provided from within G-3's current personnel ceiling.

2. Like Mr. Gray, whose views on the subject of Psychological Warfare are similar to mine, I believe the prompt development of the capabilities of the various responsible agencies and departments of the government to execute Psychological Warfare operations under terms of reference established by the National Security Council is vital to the national security. The Department of the Army, of course, has a definite responsibility for psychological warfare development insofar as it affects national security and the conduct of military operations.
3. Please keep me advised on the progress being made in the establishment of the contemplated branch to handle this activity for the Department of the Army and in the procurement of necessary personnel.⁶⁸

Some, but not much, progress had been made. Shortly after the status report to Secretary Gray in mid-February, a study forwarded to the Chief of Staff recommended additional personnel for both psychological warfare and special operations, and a separate branch, designated the Subsidiary Plans Branch, in the Plans Group, P&O, for that purpose.⁶⁹

A requirement had been established for approximately 16 officers with specialized qualifications in psychological warfare and special operations for assignment to Headquarters, Department of the Army; US Army, Europe; Army Field Forces (AFF); and to the Command and General Staff College, with the first 5 officers to be available July 1951. The Personnel Division (G-1) was asked to provide a civilian graduate course in international relations to furnish supplemental background in psychological warfare and special operations for the officers selected. A job description was designed, stating that the officers selected "must have had direct experience in, or be thoroughly familiar with, the conduct of psychological warfare or of clandestine and paramilitary operations in support of military operations." Letters were sent to major subordinate headquarters announcing the program.⁷⁰

G-3, Operations (the redesignated Plans and Operations Division) initiated a series of conferences with Headquarters, AFF, in Fort Monroe, Virginia, to discuss delineation of responsibilities for psychological warfare. The first conference was scheduled for 29 March 1950. One of the

items G-3 proposed for discussion at this conference is worthy of note: "Preparation and conduct of specialized school courses for Psychological Warfare student personnel, and of general indoctrination courses for all students, including consideration of the desirability of establishing a 'school center' (preferably as a part of, or as a section in, an existing Army school)." ⁷¹ While agreeing that psychological warfare deserved greater emphasis, AFF pointed out that personnel and fiscal limitations presented "a perplexing problem." The Tactical Information Detachment (2 officers and approximately 20 men) represented an encouraging start, as did the psychological warfare extension courses "now nearing completion," and the limited but valuable training material assembled. "But we admit that this is only a start," wrote Major General Robert Macon, Deputy Chief, AFF, to the G-3. ⁷²

"Only a start" also accurately described the situation at Headquarters, Department of the Army. In answer to Secretary Pace's primary question in his 29 May memorandum, the G-3 replied that the Psychological Warfare Branch would be activated "about 1 August" if necessary personnel savings were effected as a result of an ongoing G-3 survey. ⁷³ Fifteen months and two Secretaries of the Army after Kenneth Royall's instructions to establish such a branch, the Army Staff was still searching for the necessary personnel spaces.

Thus, four-and-a-half years after General Lemnitzer and General McClure had urged continued development of psychological warfare, the Army was ill-prepared in terms of personnel, equipment, and organization. On the eve of the Korean war, it had made "only a start" toward development of a psychological warfare capability.

V

THE INTERWAR YEARS, PART II: UNCONVENTIONAL WARFARE

If the Army's capability to conduct overt psychological warfare was meager in June 1950, its unconventional warfare capability was nonexistent. It was not supposed to have such a capability in peacetime; NSC 10/2 gave the responsibility for covert paramilitary activities to the Central Intelligence Agency (CIA) in June 1948. This is not to say, however, that the Army did not consider developing such a function. It did—and the story of the Army's tentative first steps in this field during the interwar years is an important link in the decisions that ultimately led to creation of the 10th Special Forces Group in early 1952.

The Airborne Reconnaissance Units

As we have seen, the impetus for the initiation of covert activities after World War II did not originate in the Central Intelligence Group, the forerunner of the CIA. Rather, it came from Secretary of War Robert Patterson in late 1946, prompting discussion among agencies initially on the subject of psychological operations.¹ Within the Department of the Army, Patterson directed in August 1946 that a letter be sent to the Commanding General, Army Ground Forces (AGF), indicating that "airborne reconnaissance agents" were successfully employed during World War II under the supervision of the Office of Strategic Services (OSS). Since the inactivation of OSS, the letter stated, no branch in the War Department was interested in the development of "airborne reconnaissance." AGF was therefore asked to prepare a study and submit recommendations on the desirability and organization of such a unit.² The War Department General Staff (WDGS) received the study in February

1947. Included in the study's recommendations was a request for an experimental unit of 6 officers and 35 enlisted men. The Military Intelligence Division (MID) within WDGS recommended approval of the study, noting:

The airborne reconnaissance units are of a special type which is essential in war time and is one of the types developed by OSS. It is essential that such a unit be maintained in peace time to develop techniques and doctrines of employment and that the knowledge of this doctrine and technique be made known by teaching in appropriate schools.³

Concurring with MID's recommendations, the Director of Organization and Training approved the study in April and directed the Commanding General, AGF, to develop tactics, techniques, and training for the proposed unit. A Table of Organization and Equipment (TO&E) was also to be prepared and submitted to the War Department; the necessary personnel spaces would be provided when activation of the unit was directed.⁴

Events of the next 18 months, however, showed the difficulties that a military bureaucracy faces when trying to create a new entity, especially during periods of fiscal and personnel constraints. By the middle of 1948, staff officers from Headquarters, AGF, were corresponding with Colonel Ray Peers, former commander of Detachment 101, OSS, to seek advice on organizational concepts for "the Airborne Recon Company, or as we have named it, the Ranger Group."⁵ The title "Ranger Group" demonstrated the confusion that often occurred when the Army grappled with creating an "unconventional" organization, particularly one with no formal predecessors in Army history. This is borne out in Major Ernest Samussen's letter to Colonel Peers, in which he noted that "we have strayed in many respects from your recommendations. This is largely due to our efforts to make a military organization which can be composed of cells of minimum size, and is thereby capable of being made into a TO&E."⁶

The confusion over what to call the new unit reflected differing ideas about how the unit would be used. A War Department paper discussed adding one "Ranger Group" to the General Reserve Troop Basis, noting that the proposed unit would not accomplish the purpose its author (apparently a Colonel Conrad) envisaged "if approved from an OSS point of view." This was in September 1948; Army Field Forces (formerly AGF) was still working on a TO&E for the Ranger Group that was not expected to be approved before January 1949.⁷

Circulation of the proposed TO&E among the staff at Army Field Forces did not clear up the confusion. The developing unit was a hybrid

organization that combined Ranger and OSS concepts; witness the proposed Ranger group mission "to organize and conduct overt and covert operations behind enemy lines thereby assuming functions formerly performed by units of the OSS." The group of approximately 115 officers and 135 enlisted men would be attached to Army groups or armies or both to perform tactical missions. Its capabilities would include conduct of sabotage and surprise attacks in the enemy's rear areas; "black" psychological warfare and propaganda; collection of information by reconnaissance and espionage; development, organization, control, and supply of resistance groups; recruitment, training, and direction of foreign civilian agents; control of captured enemy agents and assisting intelligence staffs in counterespionage; and the organization and control of escape systems in enemy-held territory.⁸

From an "OSS point of view," this organizational concept should have been unacceptable. It attempted to lump together missions and capabilities of Rangers and Commandos with those of Special Operations and Operational Group elements of OSS. It combined the tactical with the strategic. The mission statement said "OSS," but the title was "Ranger"; the mission statement also said "tactical," but the capabilities belied OSS precepts, and General Donovan himself had drawn a distinction between the missions of Rangers and Commandos and those of the OSS.

Eventually Ranger units were formed and used in Korea, but they were not the OSS-type of "unconventional warfare" organizations that Secretary of War Patterson probably had in mind when he first raised the issue in 1946. The dialogue on "Airborne Reconnaissance Units/Ranger Groups" during 1946-48 clearly showed OSS' influence on Army thinking and presaged similar discussions in the early 1950's prior to the formation of the 10th Special Forces Group.

Another example of early Army thinking on unconventional warfare was a study of special and subversive operations done in late 1947 by the Organization and Training Division, Department of the Army Staff. Its stated purpose was "to study special and subversive operations to determine the desirability of including instruction and study of such operations in the school system."⁹ It considered special operations to be the activities of US troops to activate or support both resistance groups and small unit operations behind enemy lines. Secret intelligence, morale operations ("black" propaganda), and psychological warfare were not included in the study.

Relying heavily on OSS historical data, including the seven volumes of the official *War Report of the OSS*, (which had not been approved for release at that time), the study concluded that "special operations of a subversive nature" offered great potential that "no commander should ignore" in his support of wartime military operations. The study's recommendations included providing 4 to 6 hours of instruction on the subject in appropriate service schools, continued study of the capabilities and desirable organization for special operations, and the creation of a "special operations company." That last recommendation was followed by the comment that "this notion should be deferred pending receipt of recommendations from the Joint Chiefs of Staff regarding a proposal to establish a guerrilla warfare corps."¹⁰

JCS and NSC Activities

The JCS proposal referred to was actually a series of studies on guerrilla warfare that culminated on 17 August 1948 in JCS 1807/1, a memorandum forwarded to the Secretary of Defense. Pertinent aspects of that memorandum were as follows:

1. The United States should provide itself with the organization and the means of supporting foreign resistance movements in guerrilla warfare to the advantage of United States national security during peace and war.
2. Guerrilla warfare should be supported under policy direction of NSC.
3. Agencies for conducting guerrilla warfare can be established by adding to the CIA's special operations functions the responsibility for supporting foreign resistance movements and by authorizing the Joint Chiefs of Staff to engage in the conduct of such operations.
4. Primary interest in guerrilla warfare should be that of CIA in peacetime and NME [National Military Establishment] in wartime.
5. *A separate guerrilla warfare school and corps should not be established* [emphasis added]. Instead, NME, in coordination with State Department and CIA, should select personnel, give them necessary training in established Army schools, supplemented by courses in other military and State Department schools.

6. The trained personnel should not be permanently separated from their original service. They should be available on call for introduction into countries to organize, direct, and lead native guerrillas.¹¹

The JCS was clearly backing away from the idea of establishing a "guerrilla warfare corps" within the military services. Why? Because during this same period the CIA was beginning to establish its position in the field of covert activities. Driven by the impetus of the cold war, the National Security Council in December 1947 gave the CIA responsibility for the conduct of covert psychological operations (NSC 4/A), and in May 1948 expanded that charter with NSC 10/2 to include the following:

Any covert activities related to propaganda; preventive direct action, including sabotage, antisabotage, demolition and evacuation measures; subversion against hostile states, including assistance to underground resistance movements, guerrillas and refugee liberation groups; and support of indigenous anti-Communist elements in threatened countries of the free world.¹²

To carry out these activities for the CIA, the Special Procedures Group was established in December 1947. After NSC 10/2 was issued, it was replaced by the Office of Special Projects, which was soon renamed the Office of Policy Coordination.¹³ Apparent in all of these JCS and NSC actions during the late 1947-early 1948 period was a shifting of responsibility for covert activities to the CIA.

The Army Staff's reaction to this shift was cold war enthusiasm mixed with caution about jurisdictional prerogatives. For example, in a May 1948 memorandum to the Secretary of the Army about NSC 10, Plans and Operations Division (P&O) made these comments:

P&O considers that there is an urgent need for a Director of Special Studies [eventually the Office of Special Projects in NSC 10/1 and NSC 10/2] under NSC who has a directive to strengthen and extend covert operations with the objective of defeating communism in the present "cold war." A coordinated national effort can win the "war of words" by proving that our American way of life is approaching that ideal desired by all mankind. However, it is believed that the authority of this Director should not infringe on the wartime prerogatives of the Joint Chiefs of Staff concerning plans for the conduct of a war.¹⁴

And in a 2 June memorandum to the Secretary, P&O suggested changes to a CIA report on NSC 10 to correct portions "which appear to infringe upon the JCS responsibilities concerning training and war plans," as well

as to correct "the implication that similarity in operational methods in covert intelligence activities and covert operations makes the CIA the sole agency to conduct such operations."¹⁵ This latter point reveals a touch of resentment concerning the CIA's movement into the covert operations field.

Secretary of the Army Royall had little doubt on this subject, however. On the following day, he emphatically stated "that despite the recommendations of the Army staff, he did not want a representative of the Army to be a member of the special services group [eventually the CIA's Office of Special Projects], and further that he does not want the Army to get into covert activities or even to know anything about it."¹⁶

Despite Royall's reluctance, the Army provided an officer, Colonel Ivan D. Yeaton, to represent both the JCS and the Secretary of Defense to the CIA's Office of Special Projects, in accordance with NSC 10/2.1.¹⁷ The new office was to plan and conduct covert operations "in time of peace," under the policy guidance of an operations advisory committee composed of representatives from the State and Defense Departments. Such plans and operations would be "coordinated with and acceptable to the Joint Chiefs of Staff for wartime covert operations."¹⁸

The NSC 10/2 directive had already assigned responsibility for covert operations to the CIA. The military services agreed to this because of their strong desire to "do something" about the perceived threat of communism and because of their reluctance to openly associate with the "dirty tricks" business. At the same time, the services, particularly the Army, sensitive to their institutional prerogatives, resisted any interpretations that would deprive them of a voice in the conduct of wartime covert operations. The planning and preparation responsibilities for such wartime activities, however, were a potential area for ambiguity and discord, as we shall see later.

Creation of the Office of Special Projects did not mean that the military ceased to think about unconventional warfare. In response to a request from the Secretary of Defense to continue examining "unconventional operations," the JCS formed an ad hoc Guerrilla Warfare Subcommittee to prepare a study on guerrilla warfare. (Interestingly, the subcommittee was part of an ad hoc Psychological Warfare Committee.) The subcommittee's study was essentially an exercise to establish those geographical areas of the world where it would be advantageous to have in place resistance movements capable of waging guerrilla warfare. The study established the following priorities: Central Europe, the Middle East, South Europe, West Europe, Scandinavia, and the Far East. The study also

concluded that the JCS "should retain strategic and broad policy planning functions of guerrilla warfare" within the National Military Establishment, and that the Army "should be assigned primary responsibility for all other guerrilla warfare functions." The Navy and Air Force should have not primary but "collateral responsibilities" for this activity. Finally, a familiar theme: In time of war, the theater commanders should control guerrilla warfare within their areas.¹⁹

The Office of Policy Coordination

Without question, the NSC 10/2 directive was perceived as a significant escalation of US interest in the covert side of the cold war. As William R. Corson states:

The intelligence community's reaction to the NSC's apparently unanimous endorsement and support of the "dirty tricks" authorizations was swift. In their view no holds were barred. The NSC 10/2 decision was broadly interpreted to mean that not only the President but *all* the guys on the top had said to put on the brass knuckles and go to work. As word about NSC 10/2 trickled down to the working staffs in the intelligence community, it was translated to mean that a declaration of war had been issued with equal if not more force than if the Congress had so decided.²⁰

The principal agent for this increased emphasis on covert activities was to be the CIA's Office of Policy Coordination (OPC), headed by Frank G. Wisner. A lawyer by training, Wisner had served with distinction in OSS, planning and participating in a number of imaginative operations in the Balkans during World War II. At the time of his selection to head OPC, he was serving as Deputy Assistant Secretary of State for Occupied Countries. Although Wisner appeared by background, experience, and temperament to be an excellent candidate for the new post, Army intelligence leaders opposed the choice on the basis that he was "another Donovan who'll run away with the ball." Nonetheless, Secretary of State George Marshall was confident that Wisner was the right man, and Secretary of Defense Forrestal endorsed the choice.²¹

Since the growth of OPC during the years 1948-52 was to greatly influence the Army's development of its own special warfare capability, it is important to understand Wisner's view of his charter. This was outlined in detail in a memorandum dated 1 August 1949 to Colonel Yeaton of the Joint Chiefs of Staff.²² Wisner explained the mission of OPC in the following terms:

To plan and to execute special (covert) operations or measures which are designed to reinforce or to accomplish United States foreign policy objectives; in peacetime, to formulate and execute plans to the necessary state of readiness in order that appropriate special (covert) operations may be executed in time of war as considered necessary by competent authority; in wartime, to plan and execute such special (covert) operations or measures as may be appropriate in the discharge of the OPC mission or as directed by competent authority.

Activities of the new organization would set it apart from other governmental agencies principally through an important distinction:

The techniques and means by which OPC attains its objectives differ from those of the Department of State and the National Military Establishment inasmuch as OPC operations are conducted in a covert or clandestine manner to the end that official United States interest or responsibility is not permitted to appear and if such interest should inadvertently appear, it can be plausibly disclaimed by this government.

Specifically, OPC was responsible for the planning and conduct of the covert and clandestine aspects of these activities:

1. Political warfare including assistance to underground resistance movements and support of indigenous anti-Communist elements in threatened countries of the free world.
2. Psychological warfare including "black" and "gray" propaganda.
3. Economic warfare.
4. Evacuation, including the paramount responsibility for escape and evasion.
5. Guerrilla and partisan-type warfare.
6. Sabotage and countersabotage.
7. Other covert operations (excluding espionage, counterespionage, and cover and deception for military operations).

Having laid out the mission and responsibilities of OPC, Wisner proceeded to argue the necessity for a "process of mutual education, collaboration and understanding" between OPC, the Department of State, and the military services concerning this "new weapon in the United States arsenal." In particular, he felt that the National Military Establishment should "provide guidance and support with respect to such escape and evasion, countersabotage, sabotage and guerrilla warfare activities *as may be undertaken during peacetime or which must be prepared during peacetime to a state of readiness for wartime execution.*"²³ [Emphasis added.]

This last point is important to highlight because differences of view developed later between the Army and OPC over who was responsible for what and to what degree in both peacetime and wartime preparation. At this point, however, the field appeared to be open to the CIA/OPC, and Frank Wisner was eager for help from the military services to launch his operation.

Army Assistance to OPC

In mid-1949, Wisner asked the Army's assistance for training personnel in guerrilla warfare, for certain logistical support, and for the nomination of an Army officer to be chief of the "Guerrilla Warfare Group" of CIA; the last request was subsequently withdrawn. The Secretary of the Army authorized P&O to contact the CIA directly to determine in detail the assistance required. Lieutenant Colonel John R. Deane, Jr., P&O, was designated the Army's representative for such coordination. Later, Lieutenant Colonels R. A. Baker and E. E. Baker were designated for direct contact in the areas of logistics and organization and training.²⁴

By November 1949, a series of conferences between representatives of the Department of the Army and the CIA had resulted in the selection of Fort Benning as a suitable location for a training course desired by the CIA. One of the CIA/OPC representatives who took part in these conferences was an Army lieutenant colonel who had served with Detachment 101 in Burma during World War II.²⁵

The officer's former experience in OSS insured him an important role in these Army-CIA conferences. For example, in one meeting a discussion of OSS theater organizations in World War II led to agreement among participants that the most efficient operation was one in which all clandestine organizations were brought under one head. While not committing OPC to a position, this former Detachment 101 member said that he felt "reasonably certain" that all of these plans and projects would be done with the knowledge and approval of theater commanders. He further expressed the view that the proposed joint training endeavor would help train some military personnel in covert activities, thus making the transition of such operations to JCS control in case of war a smoother task.

On this last point, Lieutenant Colonel Deane, P&O, expressed the opinion that if the CIA came under JCS control during wartime, there was no need for the Army to organize OSS-like units in peacetime, because Army resistance operations would conflict with those of the CIA. Thus he

believed that the National Military Establishment would want to insure JCS jurisdiction over the CIA during wartime; in this way the Army, by assisting the CIA in its peacetime training program, would be laying the groundwork for possible future behind-the-lines support for its tactical ground operations. The notes on these meetings show considerable agreement on these issues between Deane and the OPC representative, as well as the other participants. Indeed, the importance of these early conferences between the CIA and the Army was not only the influence of OSS experience, but also the degree of harmony that existed, harmony that would later disappear in jurisdictional squabbles.²⁶

As further evidence of this cooperative attitude, the Army provided two studies on guerrilla warfare to the CIA to assist that group in preparing a training program for covert operations. The studies, prepared by Major Materrazzi and Captain West of P&O, were forwarded with a memorandum stating that the studies represented solely the individual views of the officers who prepared them. Nonetheless, the studies acknowledged the potential value of resistance operations in a future war. They also acknowledged the influence of OSS experience on those officers interested in the subject of covert operations. Further, both papers concluded that the Army should organize and train a unit in peacetime for the support of foreign resistance movements in the event of hostilities. Both studies had been prepared in early 1949, however, and with the growing prominence of the CIA in this field, they were apparently overtaken by events.²⁷

The Joint Subsidiary Plans Division

The emergence of the CIA in both psychological warfare and covert operations, as well as the growing interest among the services in these activities because of increasing cold war tensions, led to the establishment of the Joint Subsidiary Plans Division (JSPD) in late 1949. The mission of this new joint agency, under the control of the JCS, was the following:

[To] coordinate the peacetime development of psychological warfare and covert operations capabilities within the Armed Services, coordinate detailed military plans and other agencies of the government, particularly with Department of State and the Office of Policy Coordination [CIA], and, in wartime, [to] become the means by which the JCS would provide continuous direction and guidance in these specialized fields to commanders under their control.²⁸

Rear Admiral Leslie C. Stevens was selected to be the first chief of the JSPD, although he had limited experience in psychological warfare and

covert operations. Stevens, assisted by deputies from each of the other services, initially had a small staff of six officers. The Army concurred in his nomination.²⁹

Actually, the principal impetus for establishment of the JSPD appears to have come from the CIA. In a memorandum to the Secretary of Defense in May 1949, the Director of Central Intelligence asked that a staff of service representatives be appointed to "consult with and assist CIA officers in the establishment of a para-military training program." Frank Wisner's request for unilateral assistance from the Army was part of this overall move by the CIA. The JCS considered the CIA's request and determined that a need existed for the proposed training program. Their creation of the JSPD in November 1949, they believed, also provided the staff requested by the Director of Central Intelligence, and the Chief, JSPD, was directed to effect the necessary liaison between the CIA and the National Military Establishment.³⁰

The Army and Unconventional Warfare Prior to Korea

By early 1950, it was clear that the responsibility for unconventional warfare—primarily as a result of NSC 10/2—was shifting to the CIA. The intelligence agency had agreed to attach liaison officers to the staffs of unified commands to participate in planning for special operations, and the JCS staffed a message to these commands notifying them that such liaison was available if they desired it.³¹ Slowly but surely, the "new kid on the block" was becoming more active, and the services appeared willing to accept him.

This is not to say that the services themselves ceased to consider the potential for unconventional warfare in the face of growing US-Soviet tensions. An excellent example of this interest was a letter from Colonel C. H. Gerhardt, G-2, Headquarters, 2d Army, Fort Meade, Maryland, to Lieutenant General Alfred M. Gruenther, Deputy Chief of Staff for Plans and Combat Operations. Gerhardt, who had just attended a conference that included General Gruenther and the Army's Chief of Staff, General Arthur Collins, indicated his concern for both psychological and unconventional warfare in this paragraph:

Now as to the ideas: About two years back Froggy Reed of the Ordnance was out here and we got talking about new developments. He stated that there appeared to be no new developments planned in sabotage equipment and other material necessary for an underground.

We then wrote up a short study to fit the then situation as far as doing something about equipment was concerned, Europe being concerned after being overrun by the Red Army. The stages being: first, psychological warfare; second, an organized underground. This underground to be planned for now, and particularly development of equipment, new and streamlined explosives, radios, kits of various kinds, etc., that could be stockpiled—some here and some in the countries involved, and an organization put into being that would blossom into a resistance movement in case of invasion.³²

When General Collins saw Gerhardt's letter, he wrote beside the cited paragraph: "I agree that something definite should be done on a plan and an organization." Both the Director of Logistics and the Director of Intelligence were asked to "investigate the present status of planning on the matter and submit appropriate recommendations." The resultant status report on covert operations summed up basically what has been discussed in this chapter: CIA's responsibility, under NSC 10/2, for planning and conducting covert operations in peacetime; the establishment of OPC to implement NSC 10/2; the work of two ad hoc JCS committees to prepare guidance to OPC in the fields of guerrilla warfare and escape and evasion; the creation of the JSPD to insure "the effective discharge of the responsibilities of the Joint Chiefs of Staff for psychological warfare and covert operations"; and the Secretary of the Army's approval on 28 July 1949 of the provision of unilateral assistance to OPC in the field of guerrilla warfare.³³

The draft reply to Gerhardt's letter left out much of the sensitive material contained in the status reports prepared by the Army Staff. Nonetheless, the paragraph dealing with covert operations was significant:

We have been active on the Joint and Service levels for sometime now in the field of resistance movements and other allied covert operations. We are convinced that the utilization of indigenous manpower in covert operations is an important and very necessary adjunct to conventional type operations. We feel that we are making progress in these matters but, of course, we must proceed with considerable caution.³⁴

That statement typifies the Army's attitude toward unconventional warfare during the interwar years. Prompted by Secretary of War Robert Patterson, the Army began considering the possibilities for a covert operations capability patterned after OSS units as early as 1946, prior to the establishment of the CIA and OPC. This interest was fueled by a growing suspicion of Soviet intentions, but constrained by recognition of the politi-

cal sensitivity of such a capability during peacetime. Thus it was almost with a sense of relief that the services, and particularly the Army, welcomed the emergence of CIA/OPC to take the primary responsibility for covert operations. During a period of personnel and fiscal constraints, this allowed the Army to concentrate on the "conventional type operations" with which it was more comfortable. Nonetheless, the Army could not entirely evade some responsibility for the embryonic development of an unconventional warfare capability. Thus it agreed to assist OPC in its initial organization and training efforts. In fact, the evidence suggests that some Army leaders saw limited cooperation with CIA/OPC as in their enlightened self-interests; that is, an opportunity to preserve some influence during a period when institutional prerogatives and jurisdictional boundaries in a new field were in a process of flux. At any rate, the Army's attitude toward unconventional warfare during the interwar years was ambivalent. Limited though it was, however, the Army's activity in this field—particularly the doctrinal confusion that marked its tentative thinking on unconventional warfare and its early interaction with the CIA/OPC—is important for a full understanding of the subsequent developments that contributed to the creation of Special Forces. The first of these developments was the outbreak of war in Korea.

VI

KOREA AND THE OFFICE OF THE CHIEF OF PSYCHOLOGICAL WARFARE

A little over 2 years after North Korean armed forces crossed the 38th parallel, the US Army in May 1952 established the Psychological Warfare Center at Fort Bragg, North Carolina. This institution encompassed a school for both psychological operations and Special Forces training, operational psychological warfare units, and the first formal unconventional warfare force in Army history—the 10th Special Forces Group. We have seen that while basic planning took place during the post-World War II years, the Army's capability to conduct overt psychological warfare was minimal in June 1950. Similarly, while embryonic thinking on unconventional warfare took place within the Army during the interwar years, at the time of the outbreak of war in Korea primary responsibility for that activity had shifted to the CIA/OPC, or so it appeared. Thus, an examination of the period between June 1950 and May 1952 is crucial to understanding the Army's unprecedented decision to establish a center in which capabilities for both psychological and unconventional warfare would be combined at Fort Bragg. This chapter examines the impact of the Korean war on those decisions.

Impetus for a Psywar Division at Department of the Army

When the North Korean invasion began on 22 June 1950, a small Special Projects Branch existed in the G-2 Division of Headquarters (HQ), Far East Command (FECOM), that was charged with the responsibility for developing strategic and tactical warfare plans. This

branch, headed by a civilian, J. Woodall Greene (who had been in the Far East since 1943), was initially confined to radio broadcasting from Japan and to leaflet airdrops, both of which began by 29 June. Its personnel shortages were partially overcome by augmentation from local State Department Information Service personnel. The Department of the Army, of course, was unable to furnish adequate support, due to shortages in trained personnel, units, and suitable equipment.¹

The situation was such that by 5 June, Secretary of the Army Frank Pace, Jr.—who, it will be remembered, had been prodding the Army Staff to get its psychological warfare house in order—showed his concern with a memorandum for the Chief of Staff:

Events of the current Korean situation further confirm my views on the need for a Psychological Warfare organization in the Department of the Army. Please let me have a report on this matter showing action taken or being taken and, as well, such recommendations as you deem appropriate at this time.²

The Secretary was told that action had been taken to activate a branch of 10 officers within the G-3 Division on 31 July 1950 to provide General Staff supervision of all psychological warfare and special operations activities. Additionally, a study to determine how to provide for a nucleus of personnel trained in psychological warfare was in progress.³ It is interesting that the Army planned to combine psychological warfare and special operations activities in the proposed branch. Even with the CIA/OPC's growing prominence in special operations, the Army apparently wanted to at least keep its hand in the game.

Understandably, Secretary Pace was becoming impatient with the glacier-like movement of the Army bureaucracy on a subject of personal concern to him. Perhaps the most candid analysis of the Army's sluggishness was made in mid-July 1950 by a young staff officer in the G-3 Division:

With the transfer of primary responsibility of Psychological Warfare from G-2 to G-3 in January 1947, the activity reverted basically to a planning function insofar as the Department of the Army was concerned. Being largely a planning function, the activity consisted mainly of actions on highly classified matters which seldom came to the attention of other General Staff Divisions and the Technical Services. Consequently, because of the relative newness of the activity and because of the high classification placed upon it, a general lack of information gradually developed outside of G-3 (P&O) concerning

Psychological Warfare. The low priority placed on this activity within G-3 in 1948, plus the return to inactive duty of most experienced Psychological Warfare officers, tended to accelerate this condition.⁴

The officer went on to state that with the outbreak of war in Korea, the Army again had an interest in psychological warfare operations. He thus recommended that the responsibilities for that field be more clearly delineated among the General Staff, the Technical Services, and the Chief of Army Field Forces.⁵

Within a month of this assessment, that old World War II psychological warrior, Brigadier General Robert McClure, reentered the scene. In a "Dear Al" letter to Lieutenant General Albert Wedemeyer (who had recently moved from his Pentagon assignment to become Commanding General of the 6th Army, with headquarters in San Francisco), Major General Charles Bolte, the G-3, wrote that the Army's program for psychological warfare was under review to determine "the further organizational steps necessary to meet the operational requirements of the Korean situation or of a general war." He further indicated that the Army's responsibilities in this field were such that the possibility of a permanent staff agency, "preferably in the form of a Special Staff Division," should be considered for the Department of the Army. To develop specific recommendations on psychological warfare organization for the Chief of Staff, Bolte requested the presence of McClure (who was assigned to General Wedemeyer) for a few days because "I know of no one better qualified to assist us in that respect."⁶ In less than 2 weeks, Bolte received this message from McClure: "Will report to you for TDY 29 August."⁷ Help was on the way.

Despite these steps, by the end of August the Secretary of the Army's patience with the apparent lack of progress in psychological warfare organization came to an end. His displeasure, plainly evident in a memorandum to the Chief of Staff, General Collins, is quoted in its entirety:

1. I have been following the progress of the development of a psychological warfare program within the Department of the Army with considerable concern. I am not at all satisfied that we are giving this matter attention and support commensurate with the capabilities of psychological warfare as a military weapon and an instrument of national policy.
2. The discussion of the Army Policy Council meetings of 15 and 16 August and my own review of the Army's effort in this field have indicated that the principal difficulty for well over a year has been

organization and manpower. Although I am aware of the high caliber of work which has been performed, it is of particular concern to me that a psychological warfare organization which Mr. Gray approved in July 1949 has through delay in its establishment cost the Army the services of these spaces which for the past year could have been utilized in developing the Army program to a more comprehensive degree. Nor do I believe that with the establishment of a psychological warfare branch as of 1 August we have in fact assured ourselves of accomplishing desired results, if in so doing we are forced to rely on the Korean crisis to secure temporary spaces to meet personnel requirements for a unit which was not designed or intended to operate under wartime conditions.

3. The establishment of a psychological warfare organization within the Department of the Army indicates recognition of the importance of this activity in military science. Adequate allowance should therefore be made in the appropriate personnel ceilings to afford this field the permanent spaces it requires. I do not believe an organization which has necessitated so many studies and taken so long to set up should owe its final establishment and complement of personnel to an emergency which may well warrant an entirely different type staff unit.
4. I therefore desire that such spaces as have been allocated to psychological warfare on a temporary basis be established on a permanent basis and that the nomination of suitable personnel to bring the recently established psychological warfare branch to required strength be expedited.
5. I have asked Assistant Secretary Earl Johnson to give this matter of manpower for psychological warfare his personal attention.⁸

This letter is important in several respects. First, the blunt tone of Pace's memorandum—unusually so for correspondence between a Secretary of the Army and the Chief of Staff—vividly demonstrates his exasperation with what he saw as footdragging by the Army on a subject he considered vitally important. Second, the memorandum reveals Pace's desire to have the necessary permanent organization in place during peacetime, rather than rely on a crisis-imposed response to the problem. Finally, the memorandum is further evidence of a theme that we have seen throughout this study—the pressure brought to bear by civilian leaders on an Army somewhat reluctant to grapple with activities of an “unconventional” nature.

What Secretary Pace, and his predecessors, were perhaps less sensitive to, however, were the genuine difficulties that personnel and fiscal con-

straints posed for Army leaders. Most were men who had advanced in a system that gave highest priority to the "conventional," or "regular" units—in infantry, armor, and artillery—associated with combat arms. Even those senior officers who displayed interest in psychological and unconventional warfare capabilities found it natural, with the exception of a few like General McClure, to give lower priority to those activities when faced with the necessity of making choices.

In any event, the Army Staff, as a result of Secretary Pace's prodding and other current actions, struggled in the face of a deteriorating combat situation in Korea to improve its psychological warfare organization. Ironically, on the same day that Pace's blistering memorandum was signed, General Bolte, the G-3, reported in a meeting in the Army's General Council that McClure had arrived in Washington to advise and assist in preparation of recommendations to the Chief of Staff on several important aspects of psychological warfare, including the possibility of a special staff division at the Department of the Army, operations in FECOM, and adequate preparatory measures in the European command (EUCOM).⁹

On the following day, 31 August, General Bolte forwarded a recommendation to the Chief of Staff for immediate activation of the Psychological Warfare Division, Special Staff, stating that "a review of present organizational arrangements indicates that the Army is not prepared to meet its Psychological Warfare obligations," which had greatly increased because of growing cold war tensions and the Korean conflict. The organizational concept and proposed strength of 102 personnel for the new division were quickly approved by the Vice Chief of Staff on 1 September 1950.¹⁰

McClure obviously had a hand in these moves, because during the period 28 August to 3 September he held conferences with all the Deputy Chiefs of Staff; the Vice Chief of Staff; Secretary Pace; the Assistant Secretary of State, Public Affairs; and members of the Joint Staff. At the 13 September meeting of the General Council, General Bolte reported that General McClure fully supported his proposal to establish a psychological warfare division, and that approval for it had been obtained. To effect an orderly transition, the Subsidiary Plans Branch of G-3 would be expanded to take care of psychological warfare planning. Later the activity would be transferred from G-3 to the new division, after final approval about its functions and acquisition of sufficient personnel.¹¹

Creation of the Office of the Chief of Psychological Warfare

Despite the sense of urgency, creation of the new division did not occur overnight. First, there was the problem of getting authorization for the permanent allocation of the additional personnel needed. A more serious difficulty was procuring the necessary personnel trained in the specialized skills of psychological warfare. Since there was no basic course in psychological warfare available within the Army—indeed, within any of the services—the G-3 requested that a minimum of 6 officers attend a 13-week course on the subject proposed by Georgetown University and scheduled to begin on 2 October. Admittedly, this was a stopgap measure that would not adequately meet the Army's overall requirement for trained officers.¹²

There were, in fact, only seven officers qualified in psychological warfare on active duty in 1950. One of these, Lieutenant Colonel John O. Weaver, was recruited by the Chief, AFF, to become chief of a proposed psychological warfare department in the Army General School at Fort Riley, Kansas. Weaver had served as commanding officer of the combat propaganda team of the 5th Army in Italy during World War II and was a graduate of the British psychological warfare school in Cairo. Brigadier General Robert McClure, in his new position as Chief, Psychological Warfare Division (an obvious choice!), forwarded the request for Weaver's assignment to the Adjutant General. Weaver was ordered to report to Fort Riley by December 1950.¹³

On 31 October, General McClure held his first weekly staff meeting with personnel of his embryonic division. The minutes from this meeting give us valuable insights into McClure's philosophy about psychological warfare and unconventional warfare. First, he stated that he had "backing from the top down" for psychological warfare, and that the division would be granted a considerable number of personnel. But then he issued a warning: "As a general policy, all officers assigned to this work should watch their step as there is an opinion prevalent among individuals not conversant with psychological warfare that anyone connected with the function is a 'long-haired, starry-eyed' individual." Such a pessimistic note at the outset must have been disquieting to the assembled officers, particularly to those who were ambitious. The statement was a commentary on the Army's attitude toward psychological warfare, or at least its attitude as perceived by a "true believer" like General McClure. He hastened to add however, "I think that there is nothing that is not ninety percent common sense," a rather pragmatic approach, perhaps to quell the apprehensions of his new subordinates.¹⁴

McClure further stated that General Bolte agreed with him that unconventional warfare did not belong in G-3 and should be transferred to the Psychological Warfare Division. The Division, expanded from the Subsidiary Plans Branch, had not yet formally become a separate Special Staff division and therefore was still under the G-3. McClure felt that his new organization could be entitled "psychological warfare" and contain three subdivisions: psychological warfare, cover and deception, and unconventional warfare.¹⁵ We see here not only evidence of McClure's early feelings about the marriage of psychological and unconventional warfare, but also his tendency to give psychological warfare a relatively higher priority. That attitude on his part undoubtedly would influence the subsequent co-location of psychological and unconventional warfare units at Fort Bragg in 1952, and the selection of the title, Psychological Warfare Center.

Finally, on 15 January 1951, the Office of the Chief of Psychological Warfare (OCPW) became officially recognized—but not without difficulty, as expressed in a letter by McClure to Major General Daniel Noce, Chief of Staff, EUCOM, on that same day:

Orders have been issued effective today, separating this Division from G-3 and setting it up as a Special Staff division. With most of the stops pulled out, it has still taken us four months to get the administrative responsibility from G-3. Even in time of grave emergency the Pentagon moves slowly.¹⁶

Secretary of the Army Pace would have agreed with that note of exasperation. Nonetheless, a new organization, the first of its type in Army Staff history, had been born. Psychological warfare had evolved from a small section within a branch of G-3 to an office at Special Staff level with direct access to the Chief of Staff.

By early February, McClure had briefed the General Council on the organization and function of OCPW and explained the need for a rapid organization of unconventional warfare. At this point his views on the organization of his new division were firm. Since the division had been recognized and published in orders, he wanted an amendment authorizing special operations activities, and he envisaged three divisions: propaganda, unconventional warfare, and support.¹⁷

As stated in the special regulation that later outlined its organization and functions, the mission of OCPW was to "formulate and develop psychological and special operations plans for the Army in consonance with

established policy and to recommend policies for and supervise the execution of Department of the Army programs in those fields." To carry out this mission, the office was organized into three major divisions: Psychological Operations, Requirements, and Special Operations. Although the thrust of the organization was on psychological warfare, the words "and special operations" in the preceding mission statement and the existence of the Special Operations Division are highly significant because it was in this division that plans for creation of the Army's first formal unconventional warfare capability were formulated. Both the Psychological Operations and Special Operations Divisions were subdivided into branches for plans, operations, and intelligence and evaluation, while the Requirements Division was primarily concerned with organization, personnel, training, logistics, and research needs to support both psychological and special operations activities.¹⁸

Clearly, the two major concerns of this unprecedented Army Staff office were psychological and unconventional warfare (or "special operations," as the latter was called at this time). Over the next 16 months—a period of frenetic, diverse activity for General McClure and his staff—plans, policies, and decisions made in the Office of the Chief of Psychological Warfare were instrumental in the Army's decisions to establish the Psychological Warfare Center at Fort Bragg, to create the 10th Special Forces Group, and finally, to co-locate the two capabilities of psychological and unconventional warfare at this new center. To fully understand why these decisions were made, we must examine these two capabilities in Korea, as seen from the perspective of OCPW and particularly from that of General McClure.

OCPW and Psychological Warfare in Korea

Shortly after the formal establishment of OCPW, Secretary of the Army Pace reentered the fray to give McClure's embryonic program a well-timed boost of support. In another of his by now well-known memorandums to the Chief of Staff on psychological warfare, Pace referred to OCPW (one can almost sense a between-the-lines "and it's about time!"), then unequivocally presented his views on the subject:

I am keenly interested in and concerned over the successful development and progress of the psychological warfare program. Its vital importance to national security and defense in the present emergency must be fully recognized by all responsible commanders and staffs throughout the Army.¹⁹

McClure could have asked for no better entree in the struggle for recognition and influence that any new organization in a bureaucracy experiences. But the Secretary went even further; he also put in a special word for the special operations part of McClure's office. Referring again to OCPW's organization, he stressed that theater commanders should use it as a model to put their own staffs on a sound basis:

Such a basis should envisage the supervision of a *combination of propaganda and unconventional warfare activities* by staff organizations that will provide for effective integration of those activities in such a way as to insure full support of combat operations now being conducted or contemplated and planned for the future.²⁰

Since Pace heretofore had not mentioned unconventional warfare in his prodding of the Chief of Staff, and since he referred in this same memorandum to a recent discussion with the Chief of Psychological Warfare and members of the Army Policy Council, one could conclude that the Secretary's apparent endorsement of combining psychological and unconventional warfare planning functions was influenced at least in part by General McClure's views. The philosophy expressed by Pace's memorandum is significant, for McClure carried it forward in his relationships with the Far East and European theater commands and his attempts to influence their staff organizations, and with Headquarters, AFF, in the US—culminating in the co-location of psychological and unconventional warfare schooling and capabilities under the Psychological Warfare Center established at Fort Bragg in May 1952.

The "present emergency" that Secretary Pace had referred to in his memorandum was, of course, the war in Korea, which had worsened with heightening cold war tensions with the People's Republic of China and the Soviet Union. But Pace believed that the Korean situation offered an "especial opportunity for highly profitable exploitation" of psychological warfare.²¹ Indeed, a key feature of this period was the intense personal interest in the psychological warfare aspects of the conflict shown by the Secretary, an interest that was of great help to General McClure.

Examples of the Secretary's preoccupation with the subject are found in his numerous conversations with General McClure and frequent communications with the Commander in Chief, Far East Command (CINCFE), General Matthew B. Ridgeway. In early May 1951, Pace called McClure into his office, reiterated his "keen interest" in psychological warfare, and said that "quality rather than quantity" should be the measure of success in using this tool. He told McClure that he had dis-

cussed psychological warfare with General Ridgeway and expressed his wish for an all out-effort in the field. Pace offered to help McClure with his attempts to get the Air Force to furnish a special squadron of aircraft for psychological and unconventional warfare purposes, and concluded the conference by asking the General to keep him informed of activities in the field and to seek his assistance if any problem developed.²² Later the same month, the Secretary called McClure to ask whether the Army was prepared for psychological warfare activities "should the military success of the U.N. [United Nations] forces result in routing of the Reds." He also wanted to know if McClure was satisfied with FECOM's performance in psychological warfare, and restated his interest in quality rather than quantity concerning production of leaflets and radio broadcasts.²³ By the end of May, Pace was convinced that the time had come for the maximum use of psychological warfare in Korea, and conveyed his "great personal interest in the matter" to General Ridgeway.²⁴

Ridgeway's reply to Pace captures the state of psychological warfare activities in Korea at that time. He stated his plan to materially expand the psychological warfare effort in support of military operations, and indicated that current leaflet operations gave priority to tactical leaflets, "whose themes can be varied on short notice to adjust propaganda emphasis to fit different battle situations." The broad themes used for the tactical operations included good treatment of prisoners, U.N. materiel superiority, and mounting enemy casualty figures. Strategic propaganda efforts included newssheets, troop leaflets designed to depress morale and increase susceptibility to forthcoming tactical propaganda, and civilian leaflets designed to arouse anti-Chinese and anti-Soviet feeling. Plans were underway to double the weekly leaflet effort of approximately 13 million leaflets. Radio broadcasts, totaling 13 hours daily in the Korean language, would be augmented by shortwave broadcasts in Chinese to reach Chinese troops in Korea as well as Chinese civilians and troops in Manchuria. While it was too early to determine how influential psychological warfare had been in the recent heavy increase in the number of enemy prisoners taken, "preliminary interrogations indicate considerable effectiveness, both by leaflets and by loudspeakers." Ridgeway concluded by stating his belief that regular psychological warfare guidance from Washington was of "considerable importance," since activities were "an integral part of the worldwide US effort in this field and should be closely geared to activities in other areas, especially in the Far East."²⁵

Pace seized upon Ridgeway's last point. During meetings with members of the Army Staff, he frequently stressed his endorsement of psychological warfare and urged the members to give it their full support. He

believed that it was not receiving sufficient attention, and considered it the "cheapest form of warfare." He emphasized that psychological warfare had to be conducted within the framework of national policy and that the situation during negotiations in Korea illustrated that point. Explaining that he felt a responsibility to "do something" to insure that necessary high-level Government policy views on the subject were prepared and properly coordinated with field psychological warfare, he directed General McClure to prepare a memorandum stating "what he as Secretary of the Army should do" in this matter.²⁶

General Ridgeway followed up his desire for "more positive and definitive policy guidance" on psychological warfare in a cable to Pace in August 1951. He also asked for help in providing a few qualified personnel for a psychological warfare planning group in FECOM, adding an interesting note concerning the qualities he most desired in those personnel: "I personally rate integrity and intellectual capacity above experience, for the latter without both of the former is a liability, not an asset."²⁷

Pace's "Personal for Ridgeway" reply again demonstrated his interest in this specialized field: "Psychological warfare can and must become one of our most effective weapons in combatting communism. I am anxious to take whatever steps I can to achieve this end." Pace indicated that the recently established Psychological Strategy Board (PSB), headed by Gordon Gray, should be able to provide the national policy guidance needed, and that "every effort is being exerted to make the board fully operational at the earliest possible date."²⁸ As directed by President Truman, the PSB was created to provide more effective planning of psychological operations within the framework of approved national policies, and to coordinate the psychological operations of all governmental departments and agencies.

The Secretary's attempts to influence the situation in Korea went beyond these communications with FECOM. He sent a copy of Ridgeway's cable to Gordon Gray, together with his reply. McClure also forwarded copies of the same message to the JCS, urging them to emphasize to the PSB that General Ridgeway's request for high-level policy guidance he included "among the foremost of the Board's priority operational matters."²⁹

Secretary Pace's intense interest in psychological warfare influenced the attitudes and decisions of key decisionmakers in the Far East Command. Moreover, his enthusiasm for the subject aided General McClure in his endeavors to carve out a niche for OCPW within the Washington

bureaucracy. McClure was to make valuable use of the Secretary's sponsorship of psychological warfare, particularly in his relations with FECOM.

General McClure's attitude toward the Far East Command's conduct of psychological warfare activities was mixed. On the one hand, he often expressed satisfaction with FECOM's progress in this area, publicly complimented its efforts, and enthusiastically attempted to give it assistance. On the other hand, he was privately critical of psychological warfare operations in the Far East and felt that FECOM was not willing to accept the help offered. Undeterred, however, he intended "to put pressure on them to let us help them."³⁰

McClure's primary concern was with FECOM's organization for psychological warfare. Initially, the responsibility for psychological warfare resided in the G-2 Division of Headquarters, FECOM. Reflecting his own World War II experience in establishing PWD/ SHAEF and, more recently, OCPW, McClure believed that a special staff division combining both psychological and unconventional warfare functions would enhance its stature and facilitate operations. Thus, he urged in letters, reports, and visits that this step be taken. He also recommended that the 1st Radio Broadcasting and Leaflet (RB&L) Group become the theater operating agency for psychological warfare when it arrived from the United States later in 1951.³¹ At this point, in early 1951, the only US psychological warfare unit that the Department of the Army had been able to provide to FECOM was the Tactical Information Detachment, a small unit of a little over 20 personnel.

When the North Koreans attacked South Korea in June 1950, the Tactical Information Detachment—organized at Fort Riley, Kansas, in 1947—was the only operational psychological warfare troop unit in the U.S. Army. Sent to Korea in the fall of 1950, it was reorganized as the 1st Loudspeaker and Leaflet (L&L) Company, and served as the 8th Army's tactical propaganda unit throughout the conflict.³² Tactical propaganda, sometimes called combat propaganda, was directed at a specific audience in the forward battle areas and in support of localized operations.³³ Mobile loudspeakers mounted on vehicles and aircraft became a primary means of conducting tactical propaganda in Korea. One noteworthy example was the use of a loudspeaker mounted on a C-47 aircraft that in 1951 circled over 1,800 Chinese Communist troops and induced them to surrender.³⁴

As early as 1947, while there was no real military psychological organization in being, a small planning staff—a Psychological Warfare Sec-

tion (PWS)—had been created in the General Headquarters (GHQ) of FECOM. Although PWS had no field operating units, with hasty augmentation it did begin using leaflets and radio 2 days after the invasion. Obviously, PWS could not efficiently support full-scale strategic operations, so the 1st Radio Broadcasting and Leaflet (RB&L) Group was organized at Fort Riley and shipped to Korea in July 1951.

The 1st RB&L Group was specifically designed to conduct strategic propaganda in direct support of military operations.³⁵ Strategic propaganda was intended to further long-term strategic aims, and was directed at enemy forces, populations, or enemy-occupied areas.³⁶ To accomplish these tasks the 1st RB&L Group had the equipment and capability to produce newspapers and leaflets, and to augment or replace other means of broadcasting radio propaganda. The group supervised a radio station network known as the Voice of the United Nations, and often produced more than 200 million propaganda leaflets a week that were disseminated by aircraft or by specially designed artillery shells.³⁷ The leaflets expressed various themes. Some, for example, offered inducements for enemy soldiers to surrender; others were intended to bolster the morale of Korean civilians by proclaiming U.N. support.

Although the RB&L group was a concept accelerated to meet the requirements of the Korean conflict (plans were initiated by G-3, Department of the Army, in early 1950), it performed functions similar to those deemed necessary to the conduct of psychological warfare in World War II. Its Mobile Radio Broadcasting (MRB) Company bore a direct ancestral linkage with the mobile radio broadcasting companies formed under PWD/SHAEF to conduct propaganda operations in North Africa and the European theater during 1944-45. In fact, the MRB companies were the basic units organized to perform tactical psychological warfare during World War II, although radio later became an essentially strategic weapon that had no place in a purely tactical psychological unit.³⁸ Both the strategic propaganda concept embodied in the RB&L group and the tactical propaganda idea expressed by the L&L company were to figure prominently in the psychological warfare capability subsequently formed as part of the Psychological Warfare Center in 1952.

By April 1952, when the military situation was at a stalemate along the 38th parallel, three different kinds of psychological warfare were underway in Korea. "Strategic" psychological warfare was carried out by the Psychological Warfare Section, GHQ FECOM, located in Tokyo, the section having made the transition to a special staff section as recommended by McClure. The 1st RB&L Group, whose headquarters were also

in Tokyo, assisted GHQ FECOM in this endeavor. Leaflet operations blanketed North Korea with the exception of a 40-mile zone due north of the military lines; radio operations covered North and South Korea as well as parts of Manchuria and China. "Tactical" psychological warfare was directed by the Psychological Warfare Division, G-3, of HQ 8th Army, eventually located in Seoul. Assisted by the 1st L&L Company, this division directed leaflet and loudspeaker operations within 40 miles of the military line of contact. "Consolidation" propaganda was carried out by the State Department's US Information Service, based in Pusan. Its printed and visual media operations were confined to that part of Korea under the civil administration of the Republic of Korea government. Radio operations in this area were under the control of field teams of the 1st RB&L Group's Mobile Radio Broadcasting Company.³⁹

Another concern of General McClure was the failure to use Korea as a profitable testing ground or laboratory. He believed that the campaign there provided great opportunity for both experimentation and testing of methods and equipment, and expressed to the Chief of Staff in August 1951 his disappointment in the results to that point. As an example of what he had in mind, McClure suggested that helicopters be equipped with noise devices for spreading terror.⁴⁰

McClure was particularly critical of the available air support for psychological warfare in Korea and used every means at his disposal to try to improve the situation. In a "Dear Charles" letter to the G-2, GHQ FECOM, Major General Charles A. Willoughby, he unveiled his concerns:

I only wish that aircraft were assigned for the tactical leafletting and strategic leafletting so that specific targets and timing could be given with an assurance that they would be hit. The New York Times Magazine Section two weeks ago carried a photograph of the interior of a C-47, showing a couple of harassed soldiers attempting to throw out handfuls of loose leaflets which apparently were blowing all over the interior.

Referring to his own experience in World War II, McClure continued:

I feel that the Air Forces have fallen down badly on us in not using, at the beginning of this trouble, the techniques that we wound up with in 1945, such as: special leaflet squadrons, fibre casings for leaflet bombs (of which there are 80,000 here in the Arsenal), regular operations plans and orders, printing and delivery on call, etc. We are still putting pressures on back here but can do very little unless FEC makes this type of operation a military requirement.⁴¹

During his visit to FECOM in April 1951, McClure again presented his views on the subject of air support, stating that "unless aircraft demands are made operations requirements, the airdrops will continue on a catch-as-catch-can basis." The C-47, he believed, was inappropriate for leaflet drops; thus, "front line support suffers for lack of delivery by fighter bomber." He recommended that a special squadron be organized for psychological and unconventional warfare purposes.⁴²

McClure pursued his basic themes at every opportunity. He told the US Air Force (USAF) Director of Operations in May that "we were using 1918 methods of dropping leaflets over front line troops and that it was both inefficient and expensive," and asked that the special air wings being organized to support CIA activities in Korea be used for psychological warfare. In June, he fired off a memorandum to the JCS recommending that discussions be initiated between the services in order to make maximum use of all tactical aircraft for the support of psychological warfare. He forcefully expressed his views to both the Chief of Staff and the Secretary of the Army, both of whom tried to influence the situation through discussions and correspondence with their counterparts in the Air Force.⁴³

Writing to the Chief of Staff, FECOM, on "the question of air support for psychological warfare operations," McClure charged that in actual practice such support was arranged locally, that the theater commander was unable to obtain a specific allocation of aircraft. He observed that the "undesirability of such a haphazard arrangement was apparent in the European theater during World War II and is in great measure borne out by what I saw and covered in my report to General Ridgeway during my recent inspection of psychological warfare operations in Korea." McClure then boldly reiterated his proposal: "The solution we arrived at in Europe, and which I firmly believe is the remedy now, was to place certain specified aircraft under the operational control of the Psychological Warfare Staff of the Senior Commander." But even before doing this, such support "should be determined to be an operational requirement, and this determination should be made now, once and for all." This was rather forceful language to use in addressing a three-star general and smacked of telling the theater commander how to do his job. Perhaps knowing that he had the support of the Secretary of the Army gave McClure a measure of confidence in this matter. At any rate, the point that he was trying to make, McClure believed, was basic to the whole question—psychological warfare must be recognized as *important* by the theater commander. Once that was established, it was "simply a question of the necessity for the theater staff to control its operational tools in order to fulfill its mission efficiently and effectively."⁴⁴

This was vintage McClure. His campaign to improve the air support for psychological warfare in Korea illustrates the strategies and techniques used by this articulate, energetic "true believer" in his attempts to influence events in the theater commands.

Still another example of General McClure's technique was his reaction to "Operation Killer," a phrase used by HQ FECOM in its press releases to describe operations against the North Korean and Chinese forces. The following passage is from a letter written to Major General Willoughby:

I have personally been disturbed by the comparatively few Chinese prisoners we are taking, either by surrender or by capture. I realize that they are not fighting as the Chinese did in their civil wars in the three-year period that I sat along the Shankiwan Railway line. On the other hand, for two thousand years the Chinese have been induced to change sides, even to that of the Japanese, by considerations of personal gain or creature comforts. Is it possible that the "Operation Killer" and the "Hunter Killer Teams" have been so widely publicized to Chinese forces that they do not believe that they would be allowed to surrender? The wide publicity and constant repetition of the "killer" intent of our operations and the gloating of the press, and apparently even the individuals in the Battle Area, over the numbers killed versus the numbers captured, has led to a good deal of unfavorable international reactions.

Demonstrating that he did indeed understand the perspective of the combat soldier, McClure added:

I fully recognize that our troops must adopt a tough, hard-boiled killer attitude if they are going to not only survive, but to win these battles. I wonder, however, if that indoctrination, which, I repeat, is very necessary, needs to be widely publicized in the press and broadcast to our enemies.⁴⁵

Willoughby's response to McClure acknowledged that the "unfavorable psychological effects caused by recent publicity of such terms as 'Operational Killer' have been recognized here, and you will note that 8th Army news releases have avoided such phraseology." His reply also indicated that he accepted several of McClure's other suggestions on propaganda themes and techniques.⁴⁶ Thus, through personal and official correspondence and discussions with key personnel, adroit use of his relationship with the Secretary of the Army, and visits to the Far East Command—by both himself and members of his staff—McClure kept his

finger on the pulse of events in Korea at the same time that he struggled to staff OCPW and establish a niche for his new organization within the Pentagon bureaucracy.

These efforts by OCPW to help were not always appreciated by HQ FECOM. As an example, in January 1952, Lieutenant General Doyle O. Hickey, Chief of Staff, FECOM, wrote to McClure questioning a United Press story entitled, "Psy War Accounts for Third of POW's." Hickey felt that the story was an exaggeration:

While psychological warfare has unquestionably been one factor in lowering the combat effectiveness of enemy soldiers and in influencing many of them to desert, it seems evident that in almost all cases the action of our ground troops, supported by other combat arms, remains the strongest and most direct reason for the capture of prisoners.⁴⁷

McClure demonstrated considerable tact in his response, telling Hickey, "I share fully your concern over the tendency to overplay the results of psychological warfare operations as evidenced in the United Press dispatch which you brought to my attention in your letter of 13 January." Never losing an opportunity to sell his wares, however, McClure further elaborated:

On the whole, I believe that we have been successful in our determined effort to keep psychological warfare in a proper context within the "family of weapons." My views on this point are included in the Secretary's report which states: "Psychological warfare has been firmly recognized as an integral member of our family of weapons. While we realize fully that this mode of operation is not decisive by itself, it is also certain that, in combination with the conventional combat weapons, psychological warfare will contribute materially to the winning of wars."⁴⁸

The report that McClure referred to was the Secretary of the Army's semiannual report, which was included in the Semiannual Report of the Secretary of Defense—illustrating again the similarity of views between Secretary Pace and the Chief, OCPW, on the subject of psychological warfare. This exchange of letters, however, also illustrates the tendency of conventional commanders to be sensitive to actions that appear to downgrade the "primary role of the combat role of the combat troops in the field," as Hickey expressed it, and thus to consider psychological warfare as strictly an ancillary, supporting activity. As an infantry officer, McClure recognized this tendency, and his reply to General Hickey reflects an attempt both to placate the conventional commander's view—to take a

balanced position, that is—and also to insure that “psywar” received the recognition that he felt it deserved. McClure walked this particular tight-rope often.

The Psychological Warfare Section, FECOM, had other criticisms to make about the support received from the home front. These included a serious shortage of personnel with psychological warfare training or experience, particularly during the first 18 to 24 months of the war; the lack of firm, prompt high-level policy guidance and operational directives; the limitations of current printing, loudspeaker, and dissemination equipment; the serious shortage of linguists; and the lack of understanding of psychological warfare capabilities by commanders and troops at all echelons, which FECOM attributed to an apparently ineffective orientation program in the United States. FECOM finally overcame this last deficiency, it claimed, through high-level emphasis on, and orientation by, the Psychological Warfare Section within the theater; at the end of the conflict, “all divisions and corps commanders were enthusiastic supporters of psywar, demanding psywar support beyond ability of psywar agencies to produce.”⁴⁹

In spite of these differences of perspective between FECOM and OCPW, it is apparent that General McClure and his staff genuinely strove both to assist FECOM to influence the organization and conduct of psychological warfare in Korea. In large measure, these efforts were successful, due principally to the personal interest and sponsorship of Secretary Pace, to the provision of psychological warfare personnel and units by OCPW, and to the energetic, dedicated leadership of General McClure. Unconventional warfare activity in Korea, however, was another story.

OCPW and Unconventional Warfare in Korea

General McClure's attitude toward FECOM's conduct of unconventional warfare operations was similar to his views on its psychological warfare efforts, and perhaps even more critical. His criticisms focused on two broad areas: overall organization and planning for unconventional warfare by FECOM, and CIA involvement.

When the Korean war started, the minimal psychological warfare organization that existed in FECOM exceeded the one for unconventional warfare. Operations were initiated in the winter of 1950 by the G-3, 8th Army, when it appeared that the potential existed for the use of disaffected North Korean civilian personnel in behind-the-lines activities. Officers and

enlisted personnel—many of them with no previous experience in unconventional warfare—were recruited from within the theater to train and direct these native personnel in guerrilla activities. To control these operations, the G-3 Miscellaneous Group, 8th Army, was formed; later redesignated the Miscellaneous Group, 8086th Army Unit, it finally was called the Far East Command Liaison Detachment (Korea), 8240th Army Unit. According to its Table of Distribution (TD), the mission of the 8086th was the following:

1. To develop and direct partisan warfare by training in sabotage indigenous groups and individuals both within Allied lines and behind enemy lines.
2. To supply partisan groups and agents operating behind enemy lines by means of water and air transportation.⁵⁰

Although tactical conditions dictated that more emphasis be placed at first on operations as opposed to training, by early 1952 the 8240th had three control organizations for guerrilla operations known as LEOPARD, WOLFPACK, AND KIRKLAND; BAKER Section provided air support (C-46's and C-47's). All of the control organizations were based on the islands off the east and west coasts of Korea. While their strengths varied, by late 1952, for example, LEOPARD reported 5,500 combat effectives and WOLFPACK, 6,800. These forces operated as groups from centers within North Korea while others conducted tactical raids, ambushes, and amphibious operations from the U.N.-held offshore islands. Although US personnel often accompanied the tactical operations, they were rarely assigned indefinitely to the guerrilla forces located within mainland North Korea. As an example of their hit-and-run activity, the Far East Command reported a total of 63 raids and 25 patrols launched against Communist forces during the period 15-21 November 1952, resulting in 1,382 enemy casualties, although, as was often the case in such operations, the casualty figures may have been inflated.⁵¹

WOLFPACK provides an excellent example of the manner in which these unconventional warfare organizations evolved and operated. Established in March 1952, using the standard battalion organization as a guide, the initial force had an aggregate strength of 4,000 North Koreans. At the beginning, the US personnel consisted of four officers—the commander, one officer in WOLFPACK headquarters, and two in subordinate units—and three enlisted men, two of whom were communications specialists. Combat operations were required concurrently with the process of organizing, equipping, and training. Initially, six battalion-type units were organized, each with an operating base on a separate island, and by

June 1952 two more units had been created. By December 1952 the WOLFPACK staff consisted, in US personnel, of a commander, S3, S2, two enlisted radio operators, one operations noncommissioned officer (NCO), and one intelligence NCO. The S3 and S2 were lieutenants without previous unconventional warfare or special operations experience. Only three of the eight subordinate units were commanded by US officers (captains), the others by North Koreans. The captain generally functioned as a commander of a group the size of a battalion. A total of two enlisted men served in these subordinate units as general assistants and, on occasion, as deputies to the captains to whom they were assigned.⁵²

The operations conducted by WOLFPACK units were generally divided into three categories: coastal, intermediate, and interior. Coastal operations were planned on a conventional basis with forces of up to 800 men; they often involved the use of air and naval fire support and had as their primary objective the killing and capture of personnel. Intermediate operations further inland were executed by groups of 5 to 10 men over a period of 3 to 5 days, and were generally directed at pinpoint targets such as gun positions, wire lines, and targets vulnerable to sniping and demolitions. Interior operations represented the more classic guerrilla warfare operations; in these operations, a small element made an initial reconnaissance, followed by a larger increment, then by recruiting in the operational area and infiltration of the final group. Planning usually called for these forces to infiltrate in the spring and to remain until November of the same year.⁵³

In 1953, a cadre from WOLFPACK and the other organizations subordinate to the Far East Command Liaison Detachment (8240th Army Unit) were used to form what was called the United Nations Partisan Forces in Korea (UNPFK). UNPFK consisted of five partisan infantry regiments and one partisan airborne infantry regiment. It was planned that this "first United Nations Partisan Division" would reach a strength of 20,000 personnel by March 1952. Guidelines to the regimental commanders from the 8240th included the following advice:

Initiative and aggressiveness tempered by calm judgement will be encouraged. Avoid trying to win the war by yourself; pace the attack in accordance with your advantage; when the advantage has passed, get away to fight another day. Hit and run; these are the guerrilla's tactics. The planning of such an operation should include an escape route and rallying point. Substitute speed and surprise for mass.⁵⁴

Unfortunately, as the organization grew larger and more conventional, according to one participant, the effectiveness of its operations decreased correspondingly.⁵⁵

To oversee these unconventional warfare operations in Korea, HQ FECOM in Tokyo established the Far East Command Liaison Group (FECLG) under the operational control of the G-2. The Documents Research Division, a part of the Special Staff, HQ FECOM (headed by a CIA representative), controlled the CIA's operations. The Joint Advisory Commission Korea (JACK), whose head was a military officer assigned to the CIA, controlled the CIA operations in Korea—both OSO and OPC. Activities of the CIA ran the gamut from covert intelligence to unconventional warfare. The CIA placed agents to collect intelligence and assist downed pilots in escape and evasion. It conducted sabotage and small boat patrols for tactical information on both the east and west coasts. It organized indigenous forces to remain behind for shallow penetration patrolling to augment combat patrolling and gain information for large tactical operations. It conducted some guerrilla warfare. As one might expect, the variety of unconventional warfare activities engaged in by both the CIA and the services resulted in some conflicting and overlapping interests.⁵⁶

In an attempt to eliminate this conflict, an organization for Covert, Clandestine and Related Activities in Korea (CCRACK) was activated in December 1951. Its purpose was to centralize direction of all services and CIA unconventional warfare operations at Headquarters, FECOM, by combining them in one organization to support US forces in Korea. CCRACK was put under the direct command of CINCFE, but continued under the staff supervision of G-2. The Deputy Chief, CCRACK, was an individual designated by the Chief, Documents Research Section, CIA. Colonel Archibald Stuart, US Army, installed as the Chief of CCRACK, soon after was promoted to brigadier general. Essentially, however, the unconventional warfare organization of the services and the CIA in Korea remained unchanged, with continuing lack of coordination between their activities.⁵⁷

It was this apparent lack of coordination of unconventional warfare activities and the relative autonomy enjoyed by the CIA that most concerned General McClure, Chief, OCPW. In early 1951, he had already commented on the "unusual organization" that FECOM had established "whereby responsibility for covert operations and special operations behind the lines is placed in the office of the AC of S [Assistant Chief of Staff], G-2, in addition to its intelligence responsibility." He thought that such

operations should be the responsibility of G-3 or, even better, of a special staff division for both psychological warfare and special operations.⁵⁸ As we have seen, McClure had recommended to FECOM that such a division be established, and it was, in June 1951. But the new division's responsibilities for special operations apparently existed in name only. In reality those responsibilities resided within the G-2. Calling the G-3's attention to the apparent contravention by FECOM of its own general order that had established a Special Operations Section within the Psychological Warfare Division, McClure recommended that a cable be dispatched to CINCFE requesting clarification of (1) theater command and staff organization for planning and conduct of overt and covert unconventional warfare and psychological warfare, and (2) the relationship of CIA/OPC to that organization.⁵⁹

Two months later, the recommendation was returned to OCPW without action with the comment, "When the psychological warfare organization within FECOM has been established on a firm basis, it is considered that representatives from your office should go to the Far East Command to discuss psychological warfare activities." While this response from G-3 may have been an attempt to keep an overzealous OCPW from appearing to question the prerogatives of a theater commander, it was also indicative of deeper tensions between McClure's office and those of the principal staff agencies, particularly the G-2 and G-3. These tensions were the result of many factors, including the personality conflicts that often develop when strong-willed men disagree over issues. For example, there was "bad feeling" between McClure and the G-2, Major General Bolling, part of which was due to jurisdictional differences over the staff responsibility for escape and evasion. Perhaps the major factor, however, was the belief of many staff officers that the relatively new fields of psychological and unconventional warfare were "incidental activities" that demanded an unjustified share of attention and resources in terms of their real value to the Army. This attitude extended particularly to the younger field, unconventional warfare. Unfortunately the single-minded dedication with which some of McClure's staff pursued the creation of Special Forces alienated many of those with whom they had to coordinate policies and activities.⁶⁰

Undeterred by the G-3 rebuff, McClure tried other tactics to emphasize his point on staff organization. Writing to the Chief of Staff, FECOM, in October 1951, he observed:

I understand that in the setup of your new Psywar Division you have not yet reached a firm decision on the placing of the special operations and particularly guerrilla warfare and similar type activities. I

strongly reiterate my comment to you on my visit to your headquarters in April, that Psywar and Special Operations are so interrelated that they should be under the same Staff Division.⁶¹

With perhaps some exaggeration, he added: "We have found the organization here at the Department of the Army level to be working splendidly and in complete harmony with other Staff Divisions, both General and Special."

McClure's principal concern about placing special operations under G-2 was that it might then be given a lower priority:

While Special Operations has some aspects of intelligence gathering, that is by no means its principal mission, and if it remains under G-2 risks being subordinated to the intelligence field. All our planning here contemplates the separation of the intelligence field from the Special Operations field. . . . I feel very strongly that the Special Operations is as it states an operation more appropriately monitored by G-3 than G-2.

The recommendation had little effect, so, several months later McClure decided to try another tack. He prepared a comprehensive analysis of FECOM's organization for psychological and special operations for General Mark Clark, who had replaced General Ridgeway as Commander in Chief, Far East, in April 1952. Reviewing his recommendation to Ridgeway in April 1951 to establish an organization to handle psychological and special operations and the subsequent FECOM general order in June 1951 to establish such an office, McClure observed:

While I have no desire to prescribe or unduly influence the organization which should be adopted by any Theater Commander, I would like to point out the fact that Psychological Warfare Section, GHQ FECOM has to date assumed only those functions pertaining to Psychological Warfare. Special Operations has remained under the Assistant Chief of Staff, G-2.⁶²

As a result of a JCS message in August 1951, CIA and Covert Operations in Korea had been placed under CINFE. The activation of CCRAK was an attempt to bring all behind-the-line operations under a single command agency, but CCRAK remained under the general staff supervision of G-2, FECOM, as McClure reminded Clark. Additionally—and this was a particularly crucial point with the Chief, OCPW—CIA, Far East Command, insisted that JACK (CIA, Korea) be maintained as an integral organization and remain under the control of CIA, Far East.

Based on field trip reports by members of his office, their experiences and judgments, plus a comprehensive debriefing of a former member of CCRAK, McClure offered the following conclusions in his analysis for Clark:

1. G-2, FEC, General Staff supervision of CCRAK and all behind-the-line operations have resulted in emphasis on intelligence, rather than adequate developing indigenous forces [guerrilla] in North Korea and in support of 8th Army.
2. To obtain a balance of G-2, G-3 interest, this office is of the opinion that Special Operations functions should be placed in the Psychological Warfare Section, FEC.
3. In order to eliminate duplication of personnel, equipment, and facilities, and to insure efficient coordinated operations, CIA, Korea, should be integrated into a joint task force organization (Army, Navy, Air, and CIA) under the command of CINCFE.
4. The organizational integrity policy advocated by CIA is a basic factor adversely affecting Special Forces operations in Korea.
5. Highly qualified personnel for key positions in Special Operations furnished in accordance with a special FEC requisition are not fully utilized in this field.⁶³

These conclusions and their supporting discussion vividly depict the extent of OCPW's disapproval with the autonomous CIA role in Korea. While all behind-the-line operations were ostensibly under the control of CINCFE, in reality, McClure argued, a dual chain of command existed.

The commander of CCRAK took his orders from CINCFE; the Deputy Chief, CCRAK, received his marching orders from Documents Research Division (CIA, Far East), who in turn received its guidance from CIA headquarters in Washington. At the operational level, this meant that JACK (CIA, Korea) did not carry out missions in support of the 8th Army without authority from CIA, Far East. Coordination of the unconventional warfare operations run by CCRAK and the 8th Army was too dependent on the personalities of key individuals, he felt. Ironically, the CIA in Korea integrated military personnel into its organization and often engaged in activities similar to those conducted by the 8th Army, but without proper overall coordination. All in all, McClure argued, CIA's insistence on organizational integrity resulted in an allegedly joint command, CCRAK, that had no authority to exercise command jurisdiction over CIA personnel

and efforts, in unnecessary duplication of personnel and activities, and in multiple channels that complicated the coordination and integration of operations. Together with the lack of overall formal planning and training for unconventional warfare by CCRAK or any other agency and the emphasis placed on intelligence as opposed to guerrilla warfare, these problems added up to a situation where the potential for behind-the-lines operations was far from being realized, McClure and his staff believed.⁶⁴ As we shall see, OCPW's differences with the CIA were the harbinger of similar frustrations encountered by OCPW in its efforts to create Special Forces and to plan for their use in Europe, and is a major theme in the evolution of the Army's attempt to create its own special warfare capability.

Shortly after his memorandum to General Clark, McClure reiterated his view to G-3: "I believe that the unconventional warfare organization for Korea, including CIA/OPC participation therein, reflects fundamental and serious defects, specifically for the conduct of guerrilla warfare." McClure criticized the conduct of guerrilla warfare in Korea as "essentially minor in consequence and sporadic in nature" and stated the FECOM lacked "an overall, integrated program of Special Forces in Korea." It is interesting to note that OCPW began to use the term "Special Forces Operations," as differentiated from "special operations," to describe US Army participation in guerrilla warfare activities. "Special operations," through long usage in the Army and as outlined in "Field Service Regulations" (Field Manual 100-5), related to "night combat," "jungle operations," "joint amphibious operations," and similar activities.⁶⁵

Actually, few Special Forces personnel were used for unconventional warfare operations in Korea. The 10th Special Forces Group was not officially created until May 1952, at which time it began training and continued recruiting efforts for personnel. Although OCPW urged HQ FECOM in November 1952 and January 1953 to requisition Special Forces staff personnel and detachments, FECOM did not act until the spring of 1953, when it requested deployment of 55 officers and 9 enlisted men from the 10th Special Forces Group. Some of these personnel became disillusioned with their assignments in Korea, believing that their Special Forces and airborne training were not properly utilized. More importantly, however, there were no Special Forces operational detachments, as opposed to individuals, requested and employed by the Far East Command. An excellent opportunity to test unconventional warfare doctrine and organization was lost, or so General McClure thought because he complained

of his difficulty in getting experience data from FECOM and of his disappointment in FECOM's failure to conduct "laboratory" tests of guerrilla operations.⁶⁶

Although McClure continued throughout his tenure as Chief, OCPW, to have reservations about the Far East Command's organization and conduct of unconventional warfare, not everyone shared his views. A staff visit to FECOM by a member of the Joint Subsidiary Plans Division in late 1951 not only confirmed that the organization for the "covert" aspects of unconventional warfare did not follow the general lines of command and staff responsibility established by OCPW, but also resulted in the observation that there was little inclination to do so:

There is nowhere within FEC a desire to organize covert activities under a Psychological Warfare Section as in D/A [Department of the Army]. The organization is suitable to the personalities and operations within the theater. It is sound, workable, and has the unqualified backing of both the military and CIA personnel concerned from top to bottom. Officers within the theater are of the opinion, and rightly so, that the theater should be free to solve its organizational problems in its own way; that what may seem ideal organizationally to far-off Washington is not necessarily the best solution to those more nearly under the guns.⁶⁷

The tone of this report indicates that the JCS had some sympathy with FECOM's posture on this matter. Furthermore, as we have seen, the Department of the Army G-2 and G-3 from time to time resisted OCPW's attempts to influence FECOM's organization and conduct of unconventional warfare. The records of this period reveal instances where G-3 in particular tried to stop or "tone down" OCPW's initiatives and proposed cables. In early 1953, for example, G-3 nonconcurred in a cable from OCPW to FECOM requesting information about the status and role of "partisan forces." Observing tartly that "considering the number of G-2 and PSYWAR officers who have visited FECOM within the past few months for the purpose of examining CCRAK organization and activities, there should be no dearth of information on the subject in D/A," the G-3 response went on to conclude: "While the ostensible purpose of the proposed cable is to obtain information, the overall effect tends towards veiled suspicion that CINCFE is on the 'wrong track.'"⁶⁸

This was, of course, exactly what McClure's office suspected, but OCPW efforts to get FECOM to recognize the errors of its ways in unconventional warfare generally came to naught. Although the Army Chief of Staff, General Collins, shared some of McClure's concerns about lack of a

fully integrated joint staff in Korea for unconventional warfare, the Far East commander, General Clark, insisted that the CIA's organizational integrity under CCRAK be maintained. And while Clark also instructed his staff to establish closer liaison with OCPW, this did not result in any significant organizational changes by FECOM in its handling of unconventional warfare.⁶⁹

For all practical purposes, both Far East Command and the CIA went their own ways, uninfluenced by General McClure and his staff.

In summary, with the impetus of the Korean war, the Army moved in late 1950 to create an unprecedented staff organization—the Office of the Chief of Psychological Warfare. The personal interest and persistent pressure that Secretary of the Army Pace brought to bear on senior Army officers, both before and after the outbreak of war, were key factors in this step. With Pace's support, Brigadier General McClure created a staff under which were placed the responsibilities for both psychological and unconventional warfare. While in the process of staffing and organizing this office, McClure energetically turned to the emergency in Korea in an attempt to assist and influence FECOM's organization and conduct of psychological and unconventional warfare—capabilities that the Army had neglected during the interwar years. He was successful with psychological warfare, less so with unconventional. The conflict in Korea, however, is only one part of the story in our quest to determine why the Army decided to establish the Psychological Warfare Center and to create the 10th Special Forces Group. To complete the picture, we must next examine the events that were taking place in the United States and in Europe.

VII

THE ROAD TO FORT BRAGG

Spurred by the war in Korea and the persistent pressure of Secretary of the Army Frank Pace, the Office of the Chief of Psychological Warfare (OCPW) was created in early 1951—a key link in the chain of events leading to establishment of the Psychological Warfare Center at Fort Bragg, N.C. Under the leadership of Brigadier General Robert A. McClure, OCPW initiated plans that resulted in this unprecedented center and in activation of an equally unprecedented concept and organization, Special Forces. To complete our examination of how and why this occurred—that is, to understand the origins of a “special warfare” capability for the Army—we must look beyond the more obvious stimulus of the Korean emergency to events taking place both in Europe and in the United States.

Psywar in Europe

While the conflict in Korea naturally occupied a major share of OCPW's attention, McClure found soon after arrival in Washington that acquaintances in the European theater would be reminding him of their needs. In December 1950, Major General Daniel Noce, Chief of Staff of Headquarters, European Command (EUCOM) sent him a “Dear Bob” letter:

I was sorry to hear that you lost your nice billet on the West Coast, but feel that the Army will benefit materially from your assignment as head of the new Psychological Warfare Division in the Department. Certainly, we have no other officer who has the broad experience which you have had in that field.¹

After this introductory compliment, General Noce got down to business, stating that EUCOM's difficulty in obtaining qualified officers for

psychological warfare and special operations had substantially slowed progress in planning for these activities. He outlined his needs for trained officers in both fields, indicating that these needs had been discussed recently with Lieutenant Colonel J. R. Deane, Jr., whom McClure had sent to Europe on a liaison trip. Interestingly, in a comment that reflects some of McClure's organizational philosophy, Noce added:

The organization of your division works in quite well with the psychological warfare and unconventional warfare organization which we have established in this headquarters, since we have placed both of these activities in one branch of our OPOT (G-3) Division.

McClure's reply on 15 January 1951 reflected his frustration in attempting to restore specialized skills neglected in the immediate post-World War II period:

I fully appreciate your difficulty in obtaining qualified officers for psychological warfare and unconventional warfare activities. We are encountering the same difficulties here. I am greatly embarrassed that we have been unable so far to furnish you the two officers for psychological warfare planning which you requested in a radio message some time ago.²

This is precisely the condition that McClure and a few other farsighted individuals had tried to avoid when, just a few years earlier, they had lamented the dispersal of people with World War II experience and had warned about the lack of attention being paid to maintaining a psychological warfare capability. Now their prophecies had been fulfilled. As one of the few senior officers who grasped the complexities and possibilities of this specialized field, McClure struggled to train personnel in both the US and the overseas theaters.

Unable to provide the planners that General Noce immediately needed, McClure offered in his 15 January letter to do "some little work here along that line as suggestions for you." In this same letter, McClure again discussed the valuable contribution made by civilians in psychological warfare, mentioning specifically the forthcoming visit to Europe of C. D. Jackson, his former deputy throughout World War II. He also provided a lengthy illustration of what he called the "practical side of back stopping" psychological warfare operations, emphasizing:

It is for this reason of thinking the problem through from the leaflets in the enemy soldier or civilian hands back to the tree from which the pulp is produced, that a man with Jackson's experience will be essen-

tial. God forbid that you go through the growing pains, trial and error, and frustrations that we did in World War II until we finally reached maturity. I can assure you that we will give you all the help possible back here.

And help he did. McClure sent General Noce several guidance materials for psychological warfare planning, including training circulars, program schedules, a draft National Psychological Warfare Plan for General War, the State Department's "Russian Plan," and estimates of logistical requirements for psychological warfare planning.³ Increased efforts were made to provide the officers EUCOM needed, and by October a small Psychological Warfare Section had been formed in the Special Plans Branch of Headquarters, EUCOM. The 301st Radio Broadcasting and Leaflet (RB&L) Group, a New York City reserve unit, was recalled to active duty, sent to Fort Riley, Kansas, for training, and shipped to Europe in November, together with the 5th Loudspeaker and Leaflet (L&L) Company.⁴

The decision to ship the 301st RB&L Group to Europe was itself fraught with controversy and indicative of the competing requirements that OCPW faced during this hectic period. General Willoughby, G-2, GHQ FECOM, felt that assignment of the 301st to the Far East Command would be the most practical solution to FECOM's urgent needs, and McClure initially agreed with this assignment. A decision by G-3 to honor the corresponding and prior need expressed by the European theater forced McClure to backtrack, however. Instead, the 1st Radio Broadcasting and Leaflet Group, a prototype unit stationed at Fort Riley, was shipped to FECOM.⁵

In addition to providing such help as it could to EUCOM, OCPW was also involved in numerous planning actions for balancing the perceived Soviet threat in Europe. An example of such actions was a meeting called by the Joint Strategic Plans Division (JSPD) of the military services' psychological warfare representatives. The meeting explored sources of discontent within Soviet satellite services (which could be exploited for propaganda to reduce morale), and means by which the services could furnish the State Department with materials for psychological warfare against the U.S.S.R. and its satellite forces. The Acting Chief, JSPD, agreed to await OCPW's submission of an outline plan for overt psychological attack against Soviet and satellite forces—a plan that would confine itself to military psychological vulnerabilities—before taking further action. The Army could make this contribution because McClure had previously alerted his staff to prepare a draft plan, "EEI [Essential Elements

of Information], Psychological Vulnerabilities of Soviet Armed Forces in Current Period (Draft)." This particular plan was illustrative of many such actions initiated by McClure during this time and reflected both his ability to anticipate needs and his desire to lead the way in psychological warfare planning among the services.⁶

He was to have some competition on that latter score, and OCPW's running feud with the Air Force was indicative of the interservice rivalry that marked these years. While attending a joint EUCOM-USAFE (US Air Force, Europe) conference in Europe, McClure noted somewhat peevisly that while both the Army and Air Force had exhibits at the conference illustrating psychological warfare objectives, techniques, and historical examples, the Air Force exhibit "was an elaborate and expensive one" that had been on tour in the United States and would visit parts of Europe. Moreover, in his eyes the exhibit was misleading:

It is unfortunate that the air exhibit fails to indicate any joint participation by other services in the field of Psychological Warfare. A false impression is given that Air Force is unilaterally conducting Psychological Warfare even in Korea today. Korean leaflets used in the exhibit and sample ones given to the audience leave the impression that the Air Force determines the content, prints the leaflet, selects the target, and then makes distribution. Quite the contrary, no leaflet has been designed or printed by the Air Force in the Far East command to date. It is an Army operation except for airlift distribution. This is the same practice as World War II.⁷

McClure had been critical of Air Force support of Army psychological warfare operations in Korea, but this statement reveals an even deeper concern that the Air Force, in its organization and activities, was "going into Psywar in a big way, disturbingly so in some respects," as he remarked to his staff.⁸ Apparently the Air Force felt that it had claim to a strategic role in psychological warfare beyond that of simply providing the airplanes for leaflet distribution. Not illogically, it argued that in addition to providing the airlift through its special Aerial Resupply and Communication (ARC) Wings, it should also be able to compose and print leaflets.⁹ In its staff organization, research projects and training plans, the Air Force embarked upon a psychological warfare program that resulted in what one disinterested Navy observer characterized as "the clash of two growing organizations, Army and Air Force Psychological Warfare."¹⁰ But McClure believed that the Air Force plans, if implemented, would "result in extravagant duplication of the minimal numbers of personnel and items of equipment envisaged for Army propaganda operations."¹¹ McClure's suspicions of Air Force intrusions into what he considered Army terrain

continued unabated and were intensified by disagreements over responsibilities for unconventional warfare.

Psychological Warfare Activities in the United States

The requirements of the theater commands in both Europe and the Far East, and the concurrent need to develop a training program and supporting structure for psychological warfare in the United States, placed heavy demands upon McClure's office. The immediate need for a qualified Psychological Warfare officer in each Army headquarters was met by sending selected personnel to a 17-week course at Georgetown University, but this stopgap measure only scratched the surface. A letter from one of McClure's staff to the harried commander of the 1st Radio Broadcasting and Leaflet Group, being readied at Fort Riley for deployment to the Far East, vividly depicts the situation:

In order that you will be better able to appreciate the personnel problems facing us here, I would like to give you a little indication of our immediate requirements for officers. We must find 38 officers for your Group, 24 officers for a student body for the first unit officers' course in the Psychological Warfare School, 14 officers for the Staff and Faculty of the Psychological Warfare School, 5 officers for the 1st Loudspeaker and Leaflet Company, 8 officers for the 5th Loudspeaker and Leaflet Company, which is to be activated in the near future, and approximately 20 additional officers for this office. That totals 109 officers needed in the immediate future and there are additional miscellaneous slots to be filled. To meet this requirement, we have so far requested approximately 100 officers. We are finding that we get only fifty percent of those we request. Those now being requested will not be available at the earliest until late April or May. However, we hope to have enough available by Mid-April to provide a minimum staff for the units at Riley, a minimum staff for the School, and a small student body for the first unit officers' course.¹²

As seen earlier, plans to establish the Psychological Warfare Department as a part of the Army General School at Fort Riley began in the winter of 1950 when General McClure forwarded a request from the Chief, Army Field Forces (AFF), to assign Lieutenant Colonel John O. Weaver as the Department's first Chief. Weaver finally acquired enough of a faculty to establish "the world's first formal school of military propa-

ganda" in the spring of 1951. The purpose of his first endeavor, the psychological warfare officer course, was

to train selected officers for assignment to psychological warfare staff and operational units; to develop in officers an understanding of the nature and employment of propaganda in combat and to make them knowledgeable of the organization's methods and techniques for the tactical conduct of propaganda in the field.¹³

The courses were designed to provide a general introduction to psychological warfare, strategic intelligence, foreign army organization, intelligence, and psychological operations, and lasted 6 to 7 weeks. Between June 1951 and April 1952, 4 officer and 2 noncommissioned officer classes were graduated—a total of 334 students, including Navy, Marine Corps, and Air Force students, as well as Allied students from Canada, Great Britain, Denmark, Belgium, France, and Italy.¹⁴

By April 1951, OCPW had requested the activation of five psychological warfare units: the 1st L&L Company with the 8th Army in Korea; the 2d L&L Company at Fort Riley as a prototype unit; the 5th L&L Company at Fort Riley, but scheduled to be sent to Europe; the 1st RB&L Group at Fort Riley, originally a prototype unit but scheduled to be sent to the Far East Command; and the 301st (Reserve) RB&L Group, to be trained at Fort Riley in May, then shipped to Europe. In addition, OCPW developed organizational concepts and functions for these troop units, as well as for OCPW and a Psychological Warfare Division, Special Staff, for theater command use. Army Field Forces received a directive to establish training programs for the general indoctrination of all military personnel in psychological warfare and to prepare detailed programs for both active and reserve psychological warfare units. In accordance with this directive, all Army schools received a request to include general indoctrination instruction in psychological warfare in their curricula. And by the end of May, McClure began sending out the first of a series of informational letters designed to maintain a close contact between OCPW and Psychological Warfare officers in all Army headquarters.¹⁵

To conduct nonmateriel research in support of the burgeoning psychological warfare effort, the Army relied almost exclusively upon a civilian agency, the Operations Research Office (ORO) operated under contract by the Johns Hopkins University. Studies by ORO included a three-volume basic reference work for psychological warfare, manuals for use by psychological warfare operators in specific countries, an analysis and grouping of sample leaflets from World War II and Korea to develop classification

schemes, and a large amount of field operations research in Korea. McClure's staff was not entirely satisfied with ORO's work, claiming that their projects were "too general in concept" and not suitable for use by the Army's psychological operators. The Johns Hopkins University also began to have misgivings about the contract, believing that it could not properly perform the development research (as opposed to operations research) required by OCPW in support of psychological warfare. Eventually the Human Resources Research Office was formed to supplant ORO and undertake a general program in psychological research for the Army.¹⁶

McClure was particularly interested in improving the development and procurement of suitable materiel for the conduct of psychological warfare. He felt that "as a result of the 1945-49 hiatus in psychological warfare and special operations planning," the military "entered the Korean conflict with little more than obsolete pieces of World War II equipment." Examples of equipment under development were a mobile reproduction unit for propaganda leaflets, a newly designed lightweight portable loud-speaker for use in frontline operations, and a completely equipped mobile 5,000-watt radio broadcasting station.¹⁷

As if these myriad competing requirements were not enough to keep it busy, OCPW soon faced the possibility of a reduction in civilian and military personnel strength, a threat that it avoided by invoking Secretary Pace's views in support of the Army's psychological warfare program. McClure had a hard enough time as it was obtaining the qualified people needed for the specialized skills of psychological warfare and special operations. That, coupled with the fact that many officers were reluctant to become involved in an activity considered "out of the mainstream," meant that he often had to "take what he could get," in the words of one of his former staff officers. Many of the officers assigned to OCPW felt "trapped" by the assignment because of McClure's reluctance to release them for other jobs, which apparently caused considerable discontent.¹⁸

There was also some disgruntlement among his officers concerning McClure's insistence on special staff status for OCPW, rather than remaining under the G-3 as a part of the General Staff, a position, they thought, of greater stature and "clout" within the Army bureaucracy. Certainly there was some basis for these feelings—under normal circumstances the General Staff does carry more "clout" and an aura of greater prestige. But McClure's World War II experience had firmly etched in his mind the overriding advantages of relative autonomy and access to the top decisionmakers that special staff status afforded. As we have seen, this was

a theme consistently advocated by him, both in the United States and in his relations with the theater commands. Despite these resentments, however, McClure was both liked and esteemed by those who worked for him. "Robbie" backed his subordinates loyally, evinced tremendous energy and enthusiasm about OCPW's role, and displayed more ability to articulate than did most general officers of his time.¹⁹ And he had vision. This vision extended to the field of unconventional warfare.

The Special Forces Ranger Regiment

At the time of OCPW's creation, General McClure had successfully lobbied to have responsibilities for the unconventional warfare function transferred from G-3 to him. While some thinking on the subject of behind-the-lines activities and special units had taken place in the Army during the interwar years, nothing much had been done to follow through on those initial ideas—particularly since CIA/OPC's assumption of the primary responsibility for covert operations. Under McClure's leadership, this situation was to change, for within a year and a half the plans formulated within his Special Operations Division (later renamed the Special Forces Division) to create a formal unconventional warfare capability for the Army came to fruition. But the path to that goal was not easy, nor did it proceed in a straight line.

McClure realized that his firsthand expertise was basically in the psychological warfare field, so early on he indicated to his staff that he was "fighting for officers with background and experience in special operations."²⁰ He brought into the Special Operations Division several officers with World War II and Korean war experience in guerrilla warfare or with long-range penetration units: Lieutenant Colonel Melvin Russell Blair and Lieutenant Colonel Marvin Waters, both of whom had served with "Merrill's Marauders"; Colonel Aaron Bank, who had fought with the French Maquis as a member of OSS; Colonel Wendell Fertig, who had commanded the guerrillas on Mindanao after the Japanese occupied the Philippines; and Lieutenant Colonel Russell W. Volckmann, who had organized and conducted guerrilla warfare operations in North Luzon and had planned and directed behind-the-lines operations in North Korea.²¹

Colonel Volckmann remembered that General McClure had approached him in the hospital (he had been evacuated from Korea in December 1951 to Walter Reed Army Medical Center in Washington) with a request to help organize the Special Operations Division, and it was only after being assured that the Department of the Army was interested in

organized behind-the-lines operations that he agreed to take the job.²² Together, the group in OCPW prepared studies, plans, organizational and operational concepts, and training programs for a formal US Army unconventional warfare capability—Special Forces.

These studies and organizational concepts were inevitably based on the personal operational experience of the officers involved, as well as on research of the past major resistance movements. In addition to his World War II guerrilla warfare experience, Colonel Volckmann possessed a considerable amount of information resulting from more than 6 months of research he had undertaken in 1949 at Fort Benning, Georgia, while preparing the draft field manuals for *Organization and Conduct of Guerrilla Warfare* and *Combatting Guerrilla Forces*.²³ Colonel Bank, another key figure, had operated as a Jedburgh in southern France, later organized and trained anti-Nazi German prisoners of war for harassing tactics against the Germans in Austria, and still later completed two OSS missions in Indochina.²⁴

Bank, who joined OCPW as Chief of the Special Operations Division at the end of March 1951 (to be succeeded by Colonel Fertig in July),²⁵ gives Volckmann considerable credit for "the development of position, planning, and policy papers that helped sell the establishment of Special Forces units in the active Army." Bank also makes clear that he and Volckmann based their plans for the Army's unconventional warfare capability on their World War II experiences with the Philippine guerrillas and OSS, and that Special Forces units were developed "in the OSS pattern of tiny units with the prime mission of developing, training, and equipping the guerrilla potential deep in enemy territory." To those who would insist on viewing the Army's Ranger units as forerunners of Special Forces, Bank unequivocally states that "actually they [Special Forces] have no connection with ranger-type organizations since their mission and operations are far more complex, time consuming, require much deeper penetration and initially are often of a strategic nature."²⁶

The comments of Volckmann and Bank, made in retrospect, may give the impression that a rather clear delineation of roles and missions for Special Forces was clearly understood from the beginning. The evidence suggests otherwise. In actuality, the path that led to the concept for organization and employment of Special Forces was tortuous and marked by controversy. The initial discussions within the Army on this subject, in fact, were reminiscent of the rather confused dialog that took place during the interwar years concerning the "Airborne Reconnaissance units," the

"Ranger Group," and the "Special Operations Company," all of which tended to intermingle OSS and Ranger precepts. The task of clearing up this doctrinal confusion proved to be no easier in 1951 than it had been during the period prior to Korea.

We have seen that in early February 1951, General McClure briefed the Army General Council on the need for a rapid organization of unconventional warfare, and that shortly thereafter Secretary Pace provided strong official support for the combining of psychological and unconventional warfare planning functions. By late March, a few weeks after Volckmann joined OCPW, McClure's new office received a copy of a brief memorandum to the Director, Organization and Training Division, from Major General Maxwell D. Taylor, G-3:

In consultation with General McClure, please develop the Army responsibility for guerrilla and antiguerrilla warfare within the field of G-3 interests. Having determined what our responsibility is, I should then like to verify that the various elements in the guerrilla mission are clearly assigned to subordinate Army units.²⁷

It is interesting to note that Taylor's directive included antiguerrilla warfare. While some lip service was given to this in the studies that followed, it was not considered an important part of Special Forces until the 1960's, when "counterinsurgency" became the third leg of the "special warfare" triad at Fort Bragg.

Up to this point, General McClure had not been able to do much about the unconventional warfare part of his mission. Arrangements had been made for a few officers from Army Field Forces and the various Army headquarters in the United States to attend a staff familiarization course in guerrilla warfare at Fort Benning beginning 5 April 1951. Those attending were generally the same officers who had attended the special psychological warfare course run by Georgetown University.²⁸ The course in guerrilla warfare was set up after a series of conferences in 1949 between the Army and the CIA had led to the selection of Fort Benning as the site for a training course desired by the CIA. McClure had also requested that his office receive full reports on all behind-the-lines operations in Korea in order to carry out its assigned responsibilities in the field of unconventional warfare.²⁹ Except for these tentative steps, however, special operations planning in OCPW lagged behind psychological warfare planning, primarily because of a lack of experienced personnel. But when McClure acquired the people he needed, he plunged ahead.

Within 10 days of receiving General Taylor's memorandum, McClure discussed the subject of guerrilla warfare with him and General Bolte, and reported to his staff that both were "very much" in favor of organizing "foreign national units." General Taylor was to do a study on the use of foreign nationals as individuals or in units, while OCPW's Special Operations Division was asked to study the possibility of organizing a Ranger company at Fort Riley with each platoon made up of a different nationality group. One of the purposes of the company would be to work with US aggressor forces in exercises to teach soldiers counter guerrilla tactics. McClure's tentative thinking at this early stage was to propose organization of six Ranger companies of foreign nationals in Europe, each company consisting of a different nationality and attached to a US division. The companies were to be in addition to the "regular" Ranger battalions of US personnel.³⁰

Two points need to be noted about this early dialog. First, it was clear that the focus of attention for future possible use of unconventional warfare was Europe, even though the Army was currently engaged in a "hot war" in Korea. The "foreign nationals" referred to were those from Eastern European countries and would be brought into the US Army through the provisions of the Lodge bill (Public Law 597, 81st Congress, 30 June 1950). Second, it was also clear that the principals involved in this dialog, including General McClure, had not sorted out in their minds the type of special unit desired or its primary objective.

Perhaps this was because the Chief of Staff, General Collins, was himself unclear on the subject, as was evident in his visit to the Infantry Center at Fort Benning a few days later. During his conference there, General Collins observed that "the Infantry School should consider the Rangers as well as other troops and indigenous personnel to initiate subversive activities. I personally established the Rangers with the thought that they might serve as the nucleus of expansion in this direction."³¹ This statement is particularly revealing when one considers the clear-cut delineation between the roles and missions of Special Forces and Ranger units later insisted on by the Chief of Staff. But such a delineation was neither well understood nor agreed to by key decisionmakers in early 1951.

Lieutenant Colonel Volckmann from OCPW was present at the conference attended by General Collins at Fort Benning, and was asked by the Infantry School to analyze portions of the Chief of Staff's statements. Volckmann's analysis should be examined in some detail, for it is the first evidence within OCPW of the philosophical basis for creation of an Army unconventional warfare capability.

First, Volckmann interpreted General Collins' use of the phrase "subversive activities" to mean what he called "special forces operations." He defined these operations to include those carried on within or behind the enemy's lines, which could encompass the following:

1. Organization and conduct of guerrilla warfare.
2. Sabotage and subversion.
3. Evasion and escape.
4. Ranger and Commando-like operations.
5. Long-range or deep penetration reconnaissance.
6. Psychological warfare (through the above media).³²

Second, commenting on the Chief of Staff's reference to indigenous personnel, Volckmann offered the following theoretical framework to clarify the overall objective of special forces operations:

We may visualize the world today as being divided into two major groups or layers of individuals that cover the earth unrestricted by national boundaries. These layers, a red and a blue, are held together by common ideologies. Any future war may well be regarded as an international civil war waged by these opposing layers. The full exploitation of our sympathetic blue layer within the enemy's sphere of influence is basically the mission of special forces operations. It is from the blue layer within the enemy's sphere of influence that we must foster resistance movements, organize guerrilla or indigenous forces on a military basis, conduct sabotage and subversion, effect evasion and escape. We should, through special forces operations, exploit this layer to assist our ranger and commando operations, and as a media for psychological warfare.

Exploitation of the "sympathetic blue layer," stated Volckmann, would enable the West to offset the manpower superiority of Soviet forces in Europe, particularly during the initial stages of their invasion. Similarly, the Allies must be prepared to counter the "red layer" within their friendly sphere of influence, a problem that involved rear-area defense, for the Soviets would exploit their "sympathetic red layer" to the maximum.

To effect the transition from this theoretical framework to reality, at least as far as the Army was concerned, Volckmann advocated concrete

measures: "Through actual command, staff, training, and operations we should pull the overall field of special forces operations out of the clouds, out of the discussion stage, and reduce it to organization, training, and operations." To accomplish this he recommended that the Infantry Center be designed as the focal point for doctrine, policy, and technique, and further advocated the activation of a "Special Forces Command" under the center to "explore, develop and conduct training in the field of special forces operations." Under this command should be placed Ranger training and "all other special forces operations."

Two other points should be noted about Volckmann's analysis. He believed that "special forces operations" should be an accepted field of conventional ground warfare; therefore "we should cease to regard special forces operations as irregular or unconventional warfare." Thus, the ultimate objective of special forces operations would be to "organize and support, wherever possible within the enemy's sphere of influence, guerrilla or indigenous forces on a military basis that are capable of efficient and controlled exploitation in conjunction with our land, air, and sea forces."

Having established that point, Volckmann proceeded to present what he envisaged as the Army's role in this activity in relation to the other services as well as to the CIA:

To me, it is basically sound that the military (the Army, since this field falls within ground operations) has the inherent responsibility *in peace* to prepare and plan for the conduct of special forces operations and in time of war to organize and conduct special forces operations. Further, I feel that it is unsound, dangerous, and unworkable to delegate these responsibilities to a civil agency.³³

Volckmann's analysis is important because it contains most of the major elements of controversy attendant to the creation of the Army's unconventional warfare capability. It also provides insight into the philosophy of the man who, probably more than any officer in General McClure's employ, shaped the creation of Special Forces.

Certainly, Volckmann's reservations about the CIA's role vis-a-vis the military services—and particularly the Army—was a major theme during these early years of OCPW's existence, as was his view that among the services the Army should have the predominant responsibility in this relatively new field. (The Air Force, in particular, disagreed with this contention.) His attempt to avoid terms like "irregular" or "unconventional" warfare indicated an early recognition of the need to allay the suspicions

of conventional military men (although the term "unconventional warfare" remains in use to this day). And his advocacy of a "Special Forces Command" and training center was to come to fruition the following year but not at Fort Benning, and not in the form that he intended. While Volckmann clearly advocated the use of indigenous personnel in guerrilla warfare, he apparently intended that a Ranger unit would support and direct these personnel and not the OSS-type of Special Forces organization that he ultimately played such an instrumental role in creating. His use of the words "special forces operations," then, was synonymous with OCPW's understanding of "special operations," that is, all types of behind-the-lines activities conducted for a military purpose, not just guerrilla warfare.³⁴ Later he would be more specific in differentiating between Ranger and Commando missions and those involving the organization and support of indigenous personnel in guerrilla warfare.

Another interesting aspect of Volckmann's memorandum was the bureaucratic tactic used to bring it to the attention of decisionmakers. After Volckmann returned from the Fort Benning conference, his memorandum was sent to the Chief of Staff, General Collins, with a request that "the interpretation that has been placed on these statements of General Collins be confirmed or commented on in order that appropriate action may be initiated by the Assistant Chief of Staff, G-3, to initiate the directives necessary to accomplish the desires of the Chief of Staff."³⁵ This proved the impetus for a series of foundational studies by OCPW, including the first one, "Army Responsibilities in Respect to Special (Forces) Operations," written principally by Volckmann and later approved by the Chief of Staff, a classic illustration of the manner in which one achieves "visibility" for a pet project in the Pentagon bureaucracy.³⁶

By the end of May, the thinking in G-3 and OCPW had begun to crystallize concerning the utilization of the Eastern European recruits who would be brought into the Army via the Lodge bill. Standards of selection were established, and a goal of 800 set for persons who would volunteer for airborne training and who also possessed specialties related to the conduct of guerrilla warfare. The mission of these aliens would be to organize guerrilla bands in Eastern Europe after war began and attack the Soviet lines of communication, their purpose being to slow, or "retard," the Soviet advance into Western Europe. Plans were under development to train these personnel in increments of 100 in a cycle that included basic combat training, completion of the Ranger course at Fort Benning, and then further specialized instruction in guerrilla warfare, sabotage, clandestine communications, and related subjects.³⁷

At the end of this training cycle, the aliens were to be sent to the European theater command. It was here that the planning was less precise. One alternative was the formation of additional "(Special Forces) Ranger Companies" to which could be assigned those Americans and Eastern European aliens trained for behind-the-lines operations, and which would be available to the theater command for commitment on D-day. Another alternative was to move the aliens to Europe for organization into provisional units, so as to be available for such operations upon the outbreak of hostilities.³⁸ These options evidence McClure's initial ruminations on the subject, but it was clear that nothing definite had been settled.

Approximately a month later, OCPW's thinking on the Lodge bill recruits began to show more specificity. The formation of a "Special Forces Regiment" of 3 battalions, a total of 2,481 personnel, was proposed. Approximately 1,300 of the 2,097 enlisted personnel would be Lodge bill recruits. The force could be trained and deployed to Europe in company-size increments to implement the unconventional warfare section of current war plans and "exploit the estimated 370,000 man potential within the U.S.S.R. and its satellites."³⁹ That last statement is particularly prophetic because, as we shall see, the subject of resistance potential in Europe was to become a point of contention between the Army and the CIA. Also noteworthy during this period were discussions by OCPW that included the idea that approximately 4,415 personnel organized into appropriate "operational groups" (an OSS term) would be needed in peacetime for commitment in the event of war. The object of this peacetime commitment would be to avoid the mistakes made during World War II: "We must not scatter arms, ammunition and supplies like so much grass seed and hope that they will fall on fertile soil and in turn prove of some assistance to our aims." To direct the forces in Europe, a "Theater Special Forces Training Command" in the United States was proposed, and the basic frame of reference was the Special Forces Ranger unit.⁴⁰

This frame of reference took on a different perspective when the Commander in Chief, Far East Command, deactivated his Ranger companies in July 1951. The Rangers had been reactivated during the Korean conflict as separate companies and attached to infantry divisions. The 8213th Army Unit, known informally as the 8th Ranger Company, was the first to be created. It was formed at Camp Drake, Japan, in August 1950, with volunteers from US forces in the Far East. It was attached to the 25th Infantry Division, took part in the drive to the Yalu, and was deactivated in March 1951. Between September 1950 and September 1951, the Ranger Command at Fort Benning formed and trained 14 Airborne Ranger com-

panies. The 1st, 2d, 3d, 4th, 5th, and 8th Companies were assigned to divisions throughout the 8th Army in Korea and were used primarily to perform long-range patrols for specialized missions and to spearhead attacks. The 2d and 4th were also attached to the 187th Regimental Combat Team for the combat jump at Munson-ni. After suffering more than 50-percent casualties, the Ranger companies were inactivated and the remaining personnel assigned throughout the divisions.⁴¹

At the time of CINCFE's action, the Commander in Chief, Europe (CINCEUR), indicated that he saw no need for Ranger companies in Europe, although he believed that there might be a need for Ranger units of battalion size under certain circumstances. One of CINCEUR's primary reasons for that position was the feeling that "Rangers, as a whole, drain first class soldiers from infantry organizations," a common complaint leveled against elite units, and one that Special Forces would have to contend with.⁴² More pertinent to the advocates of "Special Forces Operations," however, were the views of both CINCFE and CINCEUR that the Rangers were not capable of conducting guerrilla warfare missions in their theaters because of racial and language barriers. Instead, they believed, such missions should be conducted by indigenous personnel who were in turn trained, supplied, and controlled by American military personnel.⁴³

Voicing a related concern, Army, Field Forces (AFF)—commenting on OCPW's staff study, "Special Forces Ranger Units"—forwarded the view that any reference to Rangers should be deleted because "envisioned Special Forces will in all probability be involved in subversive activities." AFF believed that the concept of Special Forces should focus on the use of indigenous guerrilla groups behind enemy lines rather than American-staffed Ranger units; therefore, Rangers and Special Forces should be kept as separate and distinct organizations.⁴⁴

The result of all this was a meeting on 23 August 1951, presided over by the G-3, General Taylor, from which came a decision to deactivate all Ranger units and convert the Ranger Training Command into a Department of the Infantry School. This department would conduct Ranger training for selected officers and enlisted men who on completion of the course would return to their parent units (a pattern that has continued until the present day). During the meeting the question arose concerning what agency would be capable of conducting "deep penetration activities," at which point, according to Colonel Aaron Bank's memorandum, "General Taylor was thoroughly briefed on the mission and capabilities of a Special Forces organization."⁴⁵

This was perhaps the perfect illustration of the adage, "being at the right place at the right time," because the personnel spaces needed to create the 10th Special Forces Group ultimately became available as a result of the deactivation of the Ranger units. Henceforth there was to be little use of "Ranger" terminology by OCPW in its efforts to sell the concept of Special Forces or in its proposals for the organization to carry out guerrilla warfare. Its initial draft Table of Organization and Equipment (TO&E) for the "Special Forces Group," for example, presented as the group's mission the following: "To infiltrate its component *operational groups* [emphasis added] to designated areas within the enemy's sphere of influence and organize the indigenous guerrilla potential on a military basis for tactical and strategic exploitation in conjunction with our land, sea, and air forces."⁴⁶ The organization and functions of the group and its subordinate operational elements clearly depicted the influence of OSS concepts—particularly the Operational Group command—rather than those of the Rangers.

Ironically, a year later OCPW found it necessary to point out to Army Field Forces that use of the subordinate units of the Special Forces Group on independent Commando- or Ranger-like missions, "while a capability," was "to be discouraged as being highly wasteful of the highly developed skills wrapped up in the operational teams."⁴⁷ This was in the fall of 1952, when the 10th Special Forces Group was recruiting and training at Fort Bragg for deployment to Europe.

But Army Field Forces was not the only command in late 1952 whose ideas on the use of Special Forces elements differed from those of OCPW. In his preliminary planning for the utilization of the 10th Special Forces Group, Brigadier General Willard K. Liebel of the European Command envisaged the D-day employment of small groups to strike at close-in targets within a 50-mile zone immediately in front of US tactical divisions. McClure objected strenuously on this question of "basic Special Forces doctrine," telling Liebel that such an activity was a Ranger- or Commando-like action, normally of short duration, that did not require highly trained Special Forces personnel, and that this "was not in consonance with the concept underlying the creation of the 10th Special Forces Group." That concept was clear, thought McClure: "We continue to maintain that Special Forces Operational Detachments have the mission and capability of developing indigenous guerrilla forces, conducting operations behind the enemy lines, and of sustaining these operations for an indefinitely long time." To buttress his case, McClure told Liebel that "the Chief of Staff has insisted that Special Forces shall not duplicate the

training and doctrine of ranger and commando units.”⁴⁸ This was the same Chief of Staff, General Collins, who in April 1951 stated that he had “personally established the Rangers with the thought that they might serve as the nucleus for expansion in this direction [to initiate subversive activities].”

This apparent turnabout in the Chief of Staff's philosophy illustrates the confusion and difficulties that often accompany the emergence of a new concept within the military bureaucracy, particularly if that concept involves the creation of an “elite” unit. One of the principal requirements for “eliteness” is the possession of a specialized function, one that does not fall within the province of other military organizations. It is difficult to justify the existence of elite units if there appears to be unnecessary overlapping or redundancy of their functions and capabilities with those of other units. This is particularly so during periods of acute manpower shortages. In order to survive, the definition of an elite unit's special mission (and the acceptance of that mission by the bureaucracy) is a crucially important task.⁴⁹

McClure and his staff came to recognize this necessity. With the deactivation of the Rangers, OCPW expended more and more effort to specify guerrilla warfare as the primary mission of the Special Forces organization that they proposed. Part of the confusion that marked this effort was of their own making, however. Their concept of “Special Forces Operations,” for instance, was in actuality an all-encompassing heading under which were grouped the many kinds of operations—of which guerrilla warfare was one—whose only common denominator was that they were conducted within or behind enemy lines. One would have thought, obviously, that a Special Forces unit should conduct “Special Forces Operations” that included, by OCPW's definition, Ranger and Commando activities. But as time went on, the architects of Special Forces found it necessary to point out the error, as they saw it, of linking the Special Forces group and its component unit missions with the term “Special Forces Operations,” on the assumption that the Special Forces Group was a TO&E unit designed to conduct all such operations. Needless to say, this rather subtle distinction was lost on many. This blurring of roles and missions was not aided, either, by OCPW's initial moves to graft the guerrilla warfare concept onto the Ranger organization, followed by its rather vigorous efforts to dissociate Special Forces from the Rangers.

Eventually, OCPW did answer General Taylor's initial directive to develop the Army responsibility for guerrilla warfare and then to assign

that responsibility to subordinate Army units. The unit that evolved at Fort Bragg in 1952 was the Special Forces Group and its organization was based on OSS concepts, not Ranger. Perhaps Volckmann and his colleagues had OSS organizational principles clearly in mind from the beginning but found it more opportune to gain initial acceptance for their ideas by tagging them onto the Rangers, whose history in the Army was known—particularly since the Chief of Staff initially seemed to favor using the Rangers in a guerrilla warfare role. Or perhaps it was simply that the officers involved were grappling with new ideas and experimenting with the organizational machinery to implement those ideas. In all probability, the answer is that a combination of the two motives was at work during this conceptual period, and the deactivation of the Rangers helped to clarify the situation.

The Road to Fort Bragg

Concurrent with the deactivation of the Rangers, General McClure began to take an interest in establishing a training facility for both psychological warfare and unconventional warfare. To be sure, Colonel Volckmann had campaigned since April for a training command or center that would fully develop the doctrine, techniques, and logistics of special forces operations. And there had been some discussion between the G-3 Division and Army Field Forces in early 1950, before the creation of OCPW, about the need for a "school center" for psychological warfare. That discussion had resulted in establishment of the Psychological Warfare Department at Fort Riley, just then producing its first graduates. But now McClure began to entertain the idea of centralizing the functions of "the whole field of OCPW" at a post other than Fort Riley.⁵⁰

McClure and Colonel Bank visited Army Field Forces in mid-August to outline the Army's responsibilities for unconventional warfare and to stress the lack of organization, training, and planning in that field as compared with the progress made in psychological warfare. The possibility was raised of establishing a "Guerrilla Training Command" at Fort Benning or perhaps Fort Campbell and moving the Psychological Warfare Department from Fort Riley to this new center.⁵¹ Thus began the search for a training center, a search that would end with the selection of Fort Bragg.

It was not an easy journey. First, there was the matter of the CIA. As we have seen, the Army basically welcomed the emergence of CIA/OPC during the interwar years, and in 1949 agreed to provide it unilateral assistance in the field of guerrilla warfare, which included help in setting

up a training course at Fort Benning. After the outbreak of war in Korea, the Army also provided some personnel to the CIA for its activities in that theater.

But then General McClure and his OCPW appeared on the scene. By the spring of 1951, McClure had already expressed his reservations about the relatively autonomous role of OPC in Korea. In subsequent months, the frustration of his unsuccessful attempts to influence the situation in Korea, plus his battle to bring Special Forces into being and plan for its use in Europe, transformed McClure's reservations into outright suspicions about the CIA's motives.

The CIA reciprocated those suspicions. For example, in mid-1951, both CIA/OPC and OCPW entered into a series of conferences to determine means of further collaboration in guerrilla warfare training programs. Even though the study that resulted indicated that the CIA would benefit by sending some of its personnel to the center being proposed by OCPW, the forwarding memorandum sent General McClure stated that "Mr. Wisner [head of OPC] would like it to be clearly understood that this understanding is reached on the assumption that the Army is creating a Special Forces Training Command for its own purposes and not at the request of CIA."⁵² The caveat expressed by Frank Wisner was obvious: The CIA was not going to place itself in the position of giving the Army an excuse to justify the creation of its own unconventional warfare capability. Perhaps it was inevitable that two strong-willed men like Wisner and McClure, both eyeing the same "turf" in a relatively new field, would come into conflict in attempting to establish the boundaries within which each would operate.

Not that there were no attempts to define those boundaries and to cooperate with each other. There were. Both men entered into an initial, tentative agreement in July 1951 concerning their understanding of the respective roles of CIA/OPC and OCPW in the field of unconventional warfare. The aforementioned conferences on training programs followed, and in April 1952 the two agencies agreed to an official liaison arrangement to coordinate materiel research activities.⁵³

There is also evidence that despite his early reservations about OPC's activities in Korea, McClure took a considerably more broadminded view of the CIA's role in unconventional warfare than did certain members of his staff. After returning from a visit to Europe in August and September

1952, where he had discussed unconventional warfare planning for that theater, McClure chided his staff:

Putnam [a JCS officer] and I talked at length reference the philosophies I expressed—as I have repeated over and over with you people. Putnam says they are not being reflected by you people at the JSPD level. I believe the Army should be the Executive Agent for guerrilla activities. I am not going to fight with CIA as to their responsibilities in those fields.

Another is the fact that I am fully in accord with supporting the CIA in their peacetime activities in getting ready for war to the maximum extent I can and in wartime will welcome any of their resources to the maximum of their capability.⁵⁴

This was the pragmatic McClure of World War II who, as Chief, PWD/SHAEF, had brought together a number of disparate agencies and nationality groups, civilian as well as military, in order to get the job done. He had learned well from that master of compromise and cooperation, Dwight D. Eisenhower. But as the months and years went by, McClure became less tolerant, gradually adopting in his condemnation of the CIA the phrases of the most virulent critics on his staff. At the end of his tenure as Chief, OCPW, the subject preoccupied him.

What caused this turnabout? Perhaps the most succinct explanation of McClure's change of attitude is found in one of the last letters he wrote before leaving OCPW in early 1953. Writing to his old friend General Bolte, then Commander in Chief, Europe, McClure explained:

Unfortunately I will not go through Germany on my way to Iran else I would take the opportunity to bring you up to date on the Army/CIA relationship. I feel that the latest paper on command relationship has so much fine print in it that we have committed ourselves to the creation of a fourth service which will effectively tie the hands of the military and require the Theater Commander to lean on and support CIA for all Unconventional Warfare. In recent conferences at CIA, I have heard the statement made repeatedly that, "Since we are now a fourth service many of the activities for which the Army was planning should be transferred to CIA, including the command of military forces designed for guerrilla warfare in time of war." Needless to say I am very unhappy about it both because I question the ability of CIA and second, because I have never believed the Joint Chiefs intended to abrogate their responsibilities for the active command of military operations in time of war.⁵⁵

Here, then, were McClure's key grievances. Aside from the perennial question during these early years of the precise delineation of peacetime and wartime responsibilities for unconventional warfare between the CIA and the Department of Defense, McClure had simply come to believe that the CIA was not capable of holding up its end of the bargain, however it was defined. Imbued with the urgency of preparing the Nation and the Army for a possible war in Europe, McClure was dissatisfied with the CIA's apparent lack of progress in preparation for guerrilla warfare. He reported to the Chief of Staff in early September 1951 that the "CIA has only now initiated planning for the execution of preparatory measures to aid in the retardation of a Soviet advance."⁵⁶ He believed, therefore, that the military—and particularly the Army—needed to have unconventional warfare forces in being, and that necessary planning, organization, and training had to be carried out before D-day. In his view, the military services could not leave these preparations to chance or in the hands of a civilian agency. Nor should the JCS allow a situation to develop where the theater commander in an active theater of war lacked full control over all military operations in his area of responsibility, as had happened in Korea, McClure believed.

Underlying McClure's doubts about the CIA's capability to perform the unconventional warfare mission, however, was a difference of philosophy between OCPW and the CIA concerning the nature of resistance potential in Europe. The CIA position on this subject was perhaps most eloquently stated by its Director, General Walter B. Smith, in a letter written to the Army G-2 in March 1952. Smith opened his letter by referring to McClure as follows:

At certain times in the past we have been importuned by General McClure's people to provide them with detailed information concerning guerrilla groups of which we may have some knowledge. We have consistently declined to furnish this information to General McClure because the information requested impinges directly upon secret operations in which we are currently engaged and for which, at this time, we are solely responsible.⁵⁷

Here was a real source of irritation. The CIA, understandably, was reluctant to share information about its operations that could compromise important intelligence assets and perhaps undermine by premature disclosure the very resistance potential that would be counted upon in wartime. McClure's office—also understandably—was frustrated by its inability to receive the information it believed necessary for proper prewar planning, and the extreme secrecy involved only heightened OCPW's suspicions

about the CIA's lack of preparedness. It was to be a persistent topic of discord between the two agencies.

In his March letter to the Army G-2, the Director of the CIA also questioned "the validity of General McClure's proposal for retardation by guerrilla forces." Expressing both the views of his agency and those of "the leading British experts in this field," Smith explained:

It is highly doubtful that general resistance forces will develop any substantial offensive capability until at least D plus six months. Enemy controls and reprisals will be extremely severe upon the outbreak of war. Certain underground organizations have even indicated that they will hesitate to go into action until the Allied battle line is stabilized on the continent and the tide is turning our way.

After enlarging upon this theme for several paragraphs, Smith then summarized his position:

For the reasons outlined above, any program which contemplates that large scale resistance organizations, developed prior to D-day and held in readiness for an indefinite period of time would be willing and capable to deliver major offensive blows within the first few weeks after the commencement of hostilities is considered by us to be unrealistic and infeasible.⁵⁸

McClure had, of course, considered the pros and cons of what he termed the "two different schools of thought on the timing of the commitment of unconventional forces." One school held that the first few days of a Soviet attack were critical, and that even a few hours of delay produced by unconventional warfare forces would be significant. The other school (the "British view") held that guerrilla forces should not dissipate their efforts prematurely and thus did not favor any uprising until regular Allied military forces were in a position to support them. McClure presented his own analysis to the Chief of Staff September 1951:

To accept the latter view would mean nothing would happen on D-day and not until we were in a position to start liberating over-run countries. To accept the former view would mean attrition might completely dissolve that work and organization which has been created. My personal view is that even with the attrition we have more to gain than to lose, and that if the British can organize after D-day for a future use, such guerrilla forces as desired, obviously we could reorganize in those areas where attrition had taken its toll.⁵⁹

In addition to disagreeing with OCPW about how the resistance should be generated and when it should be committed, the CIA also took exception with OCPW's estimates of resistance potential in Eastern Europe; it called the projected indigenous strength estimates in OCPW's Special Forces Operations Plan for Europe "unrealistic and unattainable." These and other views advanced by the CIA apparently formed the basis for initial JCS disapproval of the plan in late 1952.⁶⁰

These were fundamental differences. McClure's deepest concern, however, was best illustrated by the remark in his letter to Bolte about CIA ambitions to become a "fourth service." He was genuinely apprehensive of allowing too much latitude to the CIA because it could lead to an undue reliance by the military on CIA/OPC for unconventional warfare activities. If that happened, he feared that unconventional warfare might "become regarded among military commanders and planners as a limited, special 'cloak and dagger' function rather than as a basically important, possibly essential military responsibility."⁶¹

Here again is a reminder of the problem with image as perceived by McClure and his staff—the constant battle to achieve legitimacy for unconventional warfare among "conventional" military officers. If too much responsibility for unconventional warfare was passed to the CIA, it could reinforce the reservations that many officers already harbored concerning the Army's role in unconventional warfare. In a period of budgetary and manpower shortages, such reservations could quickly lead to the conclusion that the Army could not and should not attempt to duplicate the functions of a civilian agency. In short, McClure's primary concern, while well intentioned, was bureaucratic in nature and aimed at the establishment and preservation of an unconventional warfare capability for the Army.

Another threat to McClure's attempts to establish a strong Army role in unconventional warfare was the opposition of the Air Force. We have already seen that he was critical of the Air Force support of Army psychological warfare activities in Korea and was concerned about what he considered the unnecessary duplication of propaganda equipment and personnel in their Aerial Resupply and Communication (ARC) wings. By their support of CIA operations in Korea, these same wings also gave the Air Force claim to a leading role in unconventional warfare. The Air Force list of wartime missions for these ARC wings included introduction and evacuation of agents behind enemy lines, aerial resupply of guerrillas, support of commando-type operations and isolated Army units, printing and packaging of leaflets, and providing trained personnel capable of conducting psychological warfare through other media. In short, the Air Force

claimed the ARC wings gave them the capability to support CIA activities during peacetime or wartime, to conduct overt psychological warfare, and to direct, coordinate, and support unconventional warfare operations.⁶²

This close peacetime association with the CIA caused the Air Force, in the eyes of OCPW, to champion CIA/OPC as the agency responsible for planning and preparing the conduct of unconventional warfare, thus taking issue with the concept that the Army had a major responsibility and principal function in this field as part of land warfare. Similarly, the Air Force used this association with CIA/OPC, thought OCPW, to seek a unilateral, preeminent position among the military services for control and direction of wartime unconventional warfare activities.⁶³

As one might have expected, General McClure disagreed with the contentions of the Air Force. In his view, the Air Force was essentially a "supply agency" for unconventional warfare activities, "with transportation capable of doing certain things that the Ground Forces are going to require and going to command." He favored Air Force development of special wings to support psychological and unconventional warfare activities, but not to duplicate the Army's capabilities, and certainly not to be used as a license to claim a dominant role in those fields.⁶⁴ McClure was particularly disturbed by the lack of joint unconventional warfare planning that he found when he visited Europe in the fall of 1951, and told the Chief of Staff that the Air Force not only disagreed with the Army view on retardation but also "felt they had a major responsibility in the field of unconventional warfare which did not exclude the actual command of guerrillas." Because of the unilateral efforts of the services and what he saw as unnecessary duplication and confusion among them and in their relationship with the CIA, McClure believed that one service should be designated as the executive agency for guerrilla warfare, and that service, of course, should be the Army.⁶⁵

Valuable support for McClure's view of a dominant role for the Army in unconventional warfare came from General Eisenhower, the Supreme Allied Commander in Europe. During another visit to Europe in November 1951, McClure briefed Eisenhower on the command and coordination difficulties that had arisen with respect to unconventional warfare planning for Europe. Eisenhower was "keenly alert" to the potential that unconventional warfare offered, stated McClure in his trip report to the Chief of Staff, and gave McClure permission to quote him on the following views:

One Service must not only have a paramount interest in this field but also be the controlling authority.

In my opinion this field is an Army one and . . . in my theater it will be.

All facilities must be put under the Army. The Navy and Air Force will have to support the Army. Air support is essential but in this field the Air Force is only a transport outfit.⁶⁶

Eisenhower went on to speak strongly against extravagance resulting from duplication or individual service jealousies. It was a strong endorsement of McClure's views, but the interservice rivalry in unconventional warfare continued, particularly with respect to planning and command responsibilities in Europe. OCPW eventually did obtain recognition for the Army as having primary responsibility among the services for this new field.⁶⁷ But the conflict between the Air Force and Army that marked this process—along with the conflict between the Army and the CIA—was a key feature in the backdrop of McClure's efforts to create Special Forces and establish the Psychological Warfare Center.

In addition to the interagency and interservice rivalry that OCPW had to contend with, there was the not inconsiderable challenge of selling the Army on the concept of Special Forces and the idea of a centralized training command for both psychological and unconventional warfare. In June 1951 General Collins, the Chief of Staff, approved the conclusions of Volckmann's initial study "Army Responsibilities for Special Forces Operations" and forwarded it to the JCS, indicating that until the JCS delineated service responsibilities for unconventional warfare, the Army would use this study as a basis for planning.⁶⁸ Although an important first step, this general endorsement by Collins to proceed with investigation and planning on the subject did not provide OCPW with the specific authorization needed.

That came only after the initial discussion by McClure and Colonel Bank with Army Field Forces in August 1951; in mid-September the G-3 concurred with the recommendation of the Army Field Forces that a training center should be established for psychological warfare and special operations. Indicating to OCPW that this center should be established "on an austere basis," the G-3 also directed action "to establish the extent to which the resources of the Army are to be allocated to Special (Forces) Operations." But the following caution was pointedly added:

In view of the acute manpower situation and the known reluctance of overseas commanders to accept special units within their troop ceiling, in preference to established units, the basic policy in regard to Special

(Forces) Operations should be the maximum utilization of indigenous personnel for such operations and the minimum use of American personnel.⁶⁹

Following on the heels of the deactivation of the Ranger units, this statement clearly indicates the wariness with which conventional commanders and staffs regarded "elite" and "special" units, particularly during periods of budgetary and manpower shortages.

The opening, albeit narrow, provided by G-3, allowed OCPW to act. A cascade of actions poured from McClure's staff: representatives met with the staff of Army Field Forces to develop an agreed Table of Distribution for a Psychological Warfare Center; Tables of Organization and Equipment for the units of a Special Forces Group (no longer called a Special Forces Ranger Regiment) were developed for staffing; a proposed training circular describing the mission, capabilities, organization, concept of employment, and training of a Special Forces Group was written; a requirement for 3,700 personnel spaces, including 300 spaces for the proposed training center, was submitted; a proposed directive to the Chief of Army Field Forces outlining his responsibilities in psychological warfare and Special Forces Operations, as well as a suggested Army Field Forces training program for these areas, was prepared; and Fort Campbell, Kentucky, was recommended as the site for the new center, with a suggested activation date of 1 December 1951. These actions were reported to G-3 on 5 October, scarcely 3 weeks after OCPW had received the go-ahead from them.⁷⁰ McClure wanted to move fast.

Army Field Forces had recommended that the proposed training center be established at either Fort Campbell or Camp Pickett, Virginia. OCPW favored Fort Campbell because it had airborne and parachute maintenance facilities, but recommended to G-3 that a final decision on the location be withheld until a survey of installations was conducted.⁷¹ In the end, though, the personnel spaces requested for Special Forces and the center, the target date for activation, and the tentative location all proved inaccurate. But McClure was making rapid progress toward his goal.

Both McClure and his chief architect for Special Forces, Volckmann, were aware of the suspicions engendered among many officers by these efforts to introduce into the Army new ideas and a new organization to carry out those ideas. Both men took steps to dispel those suspicions. In a paper written in late October 1951, Volckmann analyzed the problem this way:

The question of assets, capabilities and support that must be diverted to behind-the-lines operations brings us to a final major problem. So many strictly conventional military minds "flash-red" at the mention of anything "special" or at the diversion of personnel and equipment to any channel other than conventional regular forces. In a way, they are justified in safeguarding the diversion of personnel, equipment and support that will in any way tend to weaken the capabilities of our regular forces. For the most part, however, their fears are without foundation. If they will but take time to view the problem of any future war as a whole, their initial reactions should be modified and their fears dispelled.⁷²

Volckmann believed that World War II behind-the-lines operations had fallen far short of their potential. He blamed this on the failure by the military to regard these activities as an integral part of conventional warfare. Proper emphasis, in other words, had been lacking at both staff and operating levels. The result, in his view, was guerrilla warfare conducted as a "sideshow" on a "shoestring," uncoordinated with the operations of conventional forces. To prevent this from happening again, and to convince military men of the importance of behind-the-lines operations in modern warfare, he advocated general indoctrination on the subject in service schools and specialized training in appropriate centers, such as the one for "special forces operations" that he had advocated 6 months earlier.⁷³

Similarly, in a briefing prepared for the Secretary of Defense in early November 1951, General McClure voiced his concerns about the adverse image that unconventional warfare had among some military men:

I have been told that the dynamic manner in which my office developed led to apprehension on the part of some that the Army was seeking to enter fields not properly a part of ground warfare. This is furthest from our intent. We have sought and will continue to seek to prepare ourselves and the Army to discharge those responsibilities which are proper and appropriate Army functions. . . . This broad field of unconventional warfare must be planned and conducted on a Joint and National basis. No one Service can "go it alone."⁷⁴

While he was proud of what his office had accomplished, McClure told those present at this briefing that he was also "deeply apprehensive over the future." Typifying the cold war fears that imbued so many senior officers with a sense of urgency, he stated that "none of us in this room today knows how much time we will have" because "we face an enemy who is prepared to take the field tomorrow morning." His summation: "In Psychological

Operations we are fast approaching a state of readiness," but in Special Operations, "we are years behind."⁷⁵

An ironic footnote concerning the term "special operations" should be mentioned. It was about this time—the fall of 1951—that the Army began to use the term "special forces operations" as opposed to "special operations," the reason being that the latter term was defined through long usage in the Army and as set forth in Field Manual 100-5 as relating to such activities as "night combat," "jungle operations," and "joint amphibious operations." OCPW argued that to adopt some other term for those operations "would only lead to confusion or result in costly expenditure of funds . . . to modify existing literature and doctrine already published."⁷⁶ Later, the term "special forces operations" itself would be dropped by the Army, and replaced by "unconventional warfare" (which encompassed guerrilla warfare, evasion and escape, subversion and sabotage) as the primary mission for Special Forces units. The irony is that during the 1970's, Special Forces would again adopt a version of "special operations" (with the official definition still relatively unchanged in JCS and Army literature) as one of their primary missions, a move that contributed to the perception that they were duplicating functions and capabilities of Ranger units.⁷⁷

A few days after McClure's briefing for the Secretary of Defense, a discussion took place during McClure's weekly staff meeting on the forthcoming survey of Army posts to select a site for the Psychological Warfare Center. Of the posts to be visited—Fort Benning, Fort Campbell, and Fort Bragg—McClure had a definite preference. He stated to Colonel Bank: "Make it Bragg if you can."⁷⁸

And Fort Bragg it was, but not without difficulty. The surveys conducted in November by representatives of OCPW, Army Field Forces, and the 3rd Army, revealed some resistance to that site. The Infantry Center at Fort Benning did not want to allocate space and facilities to any activity not directly related to its mission, an ironic position in view of the direct support being provided to infantry divisions in Korea by psychological warfare teams; and there were other objections as well. The 3rd Army opposed establishing the center at Fort Bragg on the grounds that other conventional combat units scheduled for activation there would have to be organized at a less desirable post. They suggested Camp Rucker, Alabama, as an alternative, but that site offered little for airborne and amphibious training and had no housing for dependents—a potential morale problem. Of the sites considered, the representatives from OCPW and Army Field

Forces clearly favored Fort Bragg: the necessary personnel spaces could be accommodated; buildings, with some modification, were available; and it offered superior training advantages and facilities for both psychological warfare and Special Forces units.⁷⁹ But first the impasse had to be broken.

This was accomplished by Colonel Glavin, the Army Field Forces representative recently transferred from OCPW, who arranged a conference between General Leonard, General Bradford, and General Hodge in an attempt to break the deadlock. Colonel Fertig, Chief of OCPW's Special Operations Division, urged McClure to personally brief General Hodge on the desirability of Fort Bragg, which he apparently did because on 4 December Glavin obtained approval for the North Carolina post.⁸⁰

Still to be obtained were the exact facilities needed at Fort Bragg, so another survey trip was planned for this purpose. General McClure's guidance was clear: "I want these requirements to be modest. We have to go on a very austere basis at first."⁸¹ He was very aware of the precarious position of these new ideas during a period of budget cutting and did not want to jeopardize their chances of survival by appearing to be too greedy in his demands.

The minutes of the OCPW staff meeting for October-December 1951 also depict continuing efforts to identify personnel on active duty with experience in behind-the-lines activities. OCPW requested the Adjutant General to prepare a roster of officers with OSS, Commando, Ranger, and guerrilla backgrounds, and sent an officer to visit General Donovan, then practicing law in New York, to examine his personal files in an attempt to obtain a list of Army officers who had served in OSS. This last effort resulted in a roster of 3,900 names, which were then screened to identify those still on active duty.⁸² Certainly this is still another indicator of the pervasive influence OSS had on the thinking of the architects of Special Forces during this crucial formative period.

The survey team that returned to Fort Bragg to select the exact location decided upon an area known as Smoke Bomb Hill. Its buildings, left over from World War II mobilization, were suitable for barracks, mess halls, administration halls, classrooms, and a library. Estimated cost for rehabilitation of the facilities was \$151,000, an exceedingly modest sum. Even this minimal estimate, however, caused some agitation; the 3rd Army representative stated unofficially that his headquarters had no funds available; thus Army Field Forces would have to allocate the necessary monies in order to get the project under way. Despite this minor maneuvering

between headquarters to fix fiscal responsibilities, Lieutenant Colonel Melvin Blair from OCPW reported to McClure that "in general, the area is exactly what we wanted."⁸³ At the end of 1951, only two major tasks remained—to obtain the necessary personnel spaces for activation of both the center and Special Forces, and to get the Chief of Staff's blessing for the whole project.

General McClure personally involved himself in these tasks. After a busy January—during which he made a major presentation before the Psychological Strategy Board on the Army's activity in psychological warfare and guerrilla warfare, pursued the question of funds for his proposed center, and investigated a security breach concerning the activation of Special Forces⁸⁴—he continued the campaign to bring his goals to fruition. In an early February 1952 memorandum to the G-3, McClure urged that the activation of new psychological warfare and Special Forces units "be expedited by every feasible method." His rationale was convincing: no Radio Broadcasting and Leaflet Group existed in the United States to function as school troops, to train replacement personnel for similar units in Europe and the Far East, or to meet emergency requirements; and units of the proposed "Special Forces Group (Guerrilla Warfare)" were needed for planned D-day actions in Europe. Clearly establishing that, in his view, the activation of psychological warfare and Special Forces units was closely intertwined with the concurrent action to approve and authorize spaces for the Psychological Warfare Center, McClure also asked that the latter project be expedited. Recognizing the vulnerability of his plans in the hands of budget cutters, McClure made an eloquent plea:

At times when the Army as a whole is faced with a reduction in the number of authorized spaces, it becomes necessary to determine areas which can absorb "cuts" without unduly impairing overall efficiency. A new activity faced with an across-the-board cut, or with a "cut" made on a fixed percentage basis, can be crippled to the point where its existence is seriously threatened. This is particularly true in the case of Psychological Warfare and Special Operations activities which are already on an austere basis. I recommend that these factors be considered when an Army-wide reduction in space authorization is contemplated.⁸⁵

The G-3's response to this plea was terse. McClure's request for early activation of the psychological warfare and Special Forces units desired would be acted on after the "implications of the reduced FY [fiscal year] 1953 budget have been fully weighed." On a brighter note, the G-3 did

indicate that it was preparing a summary sheet for the Chief of Staff recommending approval of the Psychological Warfare Center.⁸⁶

Sure enough, on 3 March 1952, the promised summary sheet was sent to General Collins. The sheet stated that implementation of the conclusions reached in the study "Army Responsibilities in Respect to Special Forces Operations," previously approved by Collins, required a "Psychological Warfare and Special Forces Center" in peacetime to train individuals and units to support theater Special Forces operations. (Again we see the importance of Volckmann's initial study as the underlying rationale for this concept.) The memorandum also indicated that the proposed center would consolidate psychological warfare and Special Forces training activities at a single installation. Three weeks later, on 27 March 1952, the Chief of Staff gave his approval that such a center be established.⁸⁷

Within 10 days, General McClure proudly provided the details of the Chief of Staff's decision to the JCS. A Psychological Warfare Center would be activated on or about 1 May 1952, at Fort Bragg, North Carolina. The administrative staff and faculty for Psychological Warfare and Special Forces Departments and a Research and Development Board would total 173 personnel on an austere basis and increase to a full strength of 362 officers and men. The Psychological Warfare School and units at Fort Riley, Kansas, would move to Fort Bragg once the new center was activated. A total of 2,220 spaces had been authorized for activation of Psychological Warfare and Special Forces units for fiscal year 1953-54.

A Special Forces Group would be activated at Fort Bragg in 3 increments of approximately 600 men and officers each, commencing about 1 May 1952.⁸⁸ General McClure's dream of centralizing the functions of "the whole field of OCPW" was near reality. The long journey to Fort Bragg was soon to end.

VIII

THE PSYCHOLOGICAL WARFARE CENTER AND THE ORIGINS OF SPECIAL WARFARE

After receiving the Chief of Staff's formal approval in late March 1952, the Office of the Chief of Psychological Warfare moved quickly to get the Psychological Warfare Center on its feet. The formal order establishing the center at Fort Bragg, under the jurisdiction of the Commanding General, 3rd Army, was published on 14 April 1952. Copies of the Table of Distribution (TD) for the center were hand-carried by General McClure's staff to 3rd Army, Army Field Forces, and Fort Bragg during the period 16-18 April. The mission of this unprecedented center, as explained by the TD, was:

To conduct individual training and supervise unit training in Psychological Warfare and Special Forces Operations; to develop and test Psychological Warfare and Special Forces doctrine, procedures, tactics, and techniques; to test and evaluate equipment employed in Psychological Warfare and Special Forces Operations.¹

Movement of equipment and personnel from Fort Riley to Fort Bragg began by late April, and on 29 May 1952 the Chief of Army Field Forces at Fort Monroe, Virginia, formally announced the activation of the Psychological Warfare Center at Fort Bragg. The same order officially transferred responsibilities for the development and teaching of psychological warfare doctrine from the Army General School at Fort Riley to the newly formed Psychological Warfare Center.²

Organization of the Center

As originally established, the Psychological Warfare Center consisted of a provisional Psychological Warfare School, the 6th Radio Broadcasting and Leaflet Group, a Psychological Warfare Board, and the 10th Special Forces Group.³ Colonel Charles N. Karlstad, former Chief of Staff of the Infantry Center, Fort Benning, Georgia, was selected as the first Commander of the center and Commandant of the Psychological Warfare School.⁴ In the foreword to an administrative booklet prepared for visitors participating in a psychological warfare seminar during 1952, Colonel Karlstad offered some thoughts on the role of his new command:

The PsyWar Center represents an effort unique to the military history of the United States. For the first time, the techniques of attacking both the minds and the bodies of our enemies have been coordinated in a single training operation. The Psychological Warfare and Special Forces Departments [of the Psychological Warfare School], closely linked, instruct in the unconventional weapons and tactics with which our modern army must be equipped to function effectively against enemy forces.⁵

(Karlstad's comments are strikingly reminiscent of General Donovan's all-encompassing concept of psychological warfare when he organized the Coordinator of Information 11 years earlier.)

One may wonder why the Psychological Warfare School was initially given a provisional status. The G-3, Department of the Army, disapproved of its activation as a formally designated Army service school on the basis that such a school was not necessary to the accomplishment of the center's mission and that the establishment of a formal school would require additional funds.⁶ This must have been particularly perplexing to the personnel at Fort Bragg; even as an element of the Army General School at Fort Riley, the Psychological Warfare Division had been given service school recognition. Formal service schools enjoyed obvious advantages over the informal schools such as those often set up by divisions and regiments. These advantages included increased prestige, funding, and equipment procurement as well as the opportunity to attract quality faculty personnel. The Psychological Warfare Center, in a letter signed by Colonel Karlstad and addressed to the Chief, Psychological Warfare, Department of the Army, made a strong case for reconsideration of the decision, an appeal that received the strong support of General McClure.⁷ Apparently the appeal was effective, for on 22 October 1952 Department of the Army General Order No. 92 officially established the Psychological Warfare School as a service school.

The purpose of the Psychological Warfare School was to "prepare selected individuals of the Army to perform those psychological warfare and special forces duties which they may be called upon to perform in war."⁸ The school was organized into a small headquarters staff and two instructional divisions: the Psychological Operations Department and the Special Forces Department. In terms of longevity, the senior element in the school was the Psychological Operations Department; it was a direct descendant of the Army General School's Psychological Warfare Division, which had been transferred and integrated into the Psychological Warfare Center in early 1952.⁹

Lieutenant Colonel Otis E. Hays, Jr., who had been Deputy of the Psychological Warfare Division of the Army General School, became the first director of the Psychological Operations Department. The mission of the department was defined as the following: The instruction and training of selected officers in the duties of psychological warfare operations staffs from Department of the Army to field army and corps levels; the instruction and training of selected individuals, officers, and non-commissioned officers as specialists in propaganda operations and as key persons in psychological warfare operational units; and the preparation and revision of extension course training literature, and field manuals on psychological warfare organization, operations, and doctrine.¹⁰ The importance of the Psychological Operations Department's activities certainly was enhanced by the Army's needs in Korea, as evidenced by this statement from the 1 January-30 June 1953 report of the Secretary of Defense:

The role of psychological warfare as a support weapon in combat was highlighted by improved psychological warfare operations carried on by the Army during the year, stimulating the development of the program at the Psychological Warfare Center at Fort Bragg. . . . Schools and units have been established there to train officers and enlisted men in all phases of this speciality.¹¹

The Secretary's report made no mention of the activities of either the 10th Special Forces Group or its counterpart in the Psychological Warfare School, the Special Forces Department. Nor was there any mention of these two elements—or of the Army's attempts to develop an unconventional warfare capability—in the 1 January-30 June 1952 report of the Secretary, although that report did note the establishment of the Psychological Warfare Center at Fort Bragg "to provide comprehensive courses of instruction in all phases of psychological warfare."¹²

The lack of publicity given to Special Forces was due largely to security considerations. Because the mission of Special Forces was

classified, little reference to its organization and activities initially appeared in press releases concerning the Psychological Warfare Center.¹³ The center continued this caution with security in its own publications, much to the consternation of the Special Forces enthusiasts among McClure's staff. They complained that the student handbook published by the Psychological Warfare School was "slanted heavily towards Psychological Warfare to the detriment of Special Forces," and feared the result would be "that the Special Forces student, therefore, will look upon himself as a 'country cousin' to the Psychological Warfare Center." Lieutenant Colonel Melvin Blair, who had been on the road attempting to "sell" Special Forces in a recruitment program, was particularly miffed and recommended that OCPW take action "to revise the handbook along more impartial lines."¹⁴ (In later years—particularly during the 1960's, the heyday of the "Green Berets"—psychological warfare would be considered the "country cousin" at the center, an ironic turnabout in perceptions.) While these complaints may appear trivial, they were evidence of a resentment that went beyond the security restrictions on publicity for Special Forces; some of McClure's staff simply did not believe that unconventional warfare units should be associated with psychological warfare, and certainly not in a subordinate role.

In any event, the junior member of the Psychological Warfare School was the Special Forces Department, which, unlike the Psychological Operations Department, had no predecessor in US Army history. With Colonel Filmore K. Mearns as its first director, the missions of this department were outlined as follows: the conduct of regular Special Forces courses for officers and selected enlisted men; the conduct of Special Forces orientation courses for designated personnel; the preparation and revision of literature and lessons for Special Forces extension courses; and the preparation and revision of training literature, field manuals, circulars, and special texts on Special Forces operations.¹⁵ Essentially, the department concentrated on teaching the fundamentals of unconventional warfare, with emphasis on the conduct of guerrilla operations, to personnel being assigned to Special Forces.

Another unique organization created as part of the center was the Psychological Warfare Board, which was to "test, evaluate, and compile reports on materiel, doctrine, procedure, technique, and tactics pertaining to and for Psychological Warfare and Special Forces."¹⁶ By early 1954, the board had completed over 40 projects, among them the operational facets of psychological warfare transmitter and receiving equipment, loudspeaker equipment, mobile reproduction equipment, and different types of leaflet dissemination techniques such as the use of mortar and artillery shells,

rockets, light liaison planes, and balloons. It appears that in the early days of 1952-53, the Psychological Warfare Board devoted its activities almost exclusively to the support of units like the 6th Radio Broadcasting and Leaflet (RB&L) Group, rather than to Special Forces.¹⁷

The nucleus of the 6th Radio Broadcasting and Leaflet Group began on 14 September 1951, with the formation of a provisional Psychological Warfare Detachment at Fort Riley. That unit soon achieved status as a permanent organization, and on 2 May 1952 it became the 6th RB&L Group. The Group consisted at that time of a Headquarters and Headquarters Company, the 7th Reproduction Company, and the 8th Mobile Radio Broadcasting Company. In June 1952, it moved to Fort Bragg to become a part of the Psychological Warfare Center. That month, the 2nd Loudspeaker and Leaflet (L&L) Company was attached to the 6th RB&L Group, and on 27 May 1953 the 12th Consolidation Company was activated and attached to the Group. As previously mentioned, the RB&L organizational concept was first employed in Korea and the Mobile Radio Broadcasting Company's ancestry could be traced to World War II, when several of these companies were used in the European theater. The 6th RB&L Group was designated as a strategic psychological warfare operational unit, and its primary purpose was to assist the national psychological warfare program during wartime within the theater of operation to which it was assigned. In addition to conducting theater-wide strategic propaganda, a further mission of the 6th RB&L was to support tactical operations.¹⁸

The 10th Special Forces Group

Even before activation of the 10th Special Forces Group, Lieutenant Colonel Blair and Colonel Volckmann from the Special Operations Division, OCPW, began visiting Army installations and schools throughout the continental United States, Alaska, Hawaii, the Far East, and Europe to promote interest in the "new concept" of war. Volunteers had to be at least 21 years old, be airborne qualified or willing to become so, and undergo a series of physical and psychological tests. Enlisted men accepted into Special Forces acquired one or more of five basic occupational specialties: operations and intelligence, engineering, weaponry, communications, and medical aid.¹⁹

The material used by OCPW for orientation and recruitment specifically drew a distinction between Special Forces and Ranger units:

Ranger units are designed and trained to conduct shallow penetration or infiltration of enemy lines. They can remain in the objective area for a limited time only. Primarily, they execute missions of a harassing and raiding nature against targets close to friendly front lines. Ranger missions are performed solely by US personnel; they do not utilize indigenous personnel in their objectives. Special Forces units have the capability of conducting long-range penetration deep into the objective area in order to organize, train, equip, and control indigenous guerrilla forces.²⁰

Indeed, not only did OCPW make a distinction concerning the missions and capabilities of Special Forces and Rangers, but the term "Special Forces operations" itself underwent a metamorphosis. Volckmann's original definition in early 1951 established that Special Forces operations were behind-the-lines activities that could encompass guerrilla warfare, sabotage and subversion, evasion and escape, Ranger- and Commando-like operations, long-range or deep-penetration reconnaissance, and psychological warfare. From January to late September 1952, OCPW recruiting material used the term to embrace the following: organization and conduct of guerrilla warfare; subversion and sabotage; political, economic, and psychological warfare as it pertains to behind-the-lines activities; infiltration and/or organization of agents within the enemy's sphere of influence in support of actual or projected Special Forces operations; Commando-type operations; escape and evasion, as effected through Special Forces operations; and antiguerrilla warfare in areas overrun by friendly forces.²¹ Both "Ranger operations" and "long-range or deep penetration reconnaissance" disappeared during this transformation; only "Commando-type operations" remained as a hint of the earlier conceptual confusion. By November 1952, the focus became even more precise, and potential volunteers for this new elite unit were told that Special Forces operations included guerrilla warfare, sabotage, and "other behind-the-lines missions, which are within the capabilities of guerrilla warfare."²² The lack of reference to Ranger or Commando operations is evident; shortly thereafter, General McClure chastened General Liebel for contemplating using the 10th Special Forces Group for those types of activities in Europe.²³ In effect, "Special Forces operations" were now synonymous with "unconventional warfare."

The Special Forces came to life formally on 19 May 1952 with the establishment of the Headquarters and Headquarters Company, 10th Special Forces Group, constituted and allotted to the Regular Army for activation and organization under the Commanding General, 3rd Army. One hundred and twenty-two officers and men were to perform these activities:

To furnish command, supply, and organizational maintenance for a Special Forces Group located in rear areas and, when provided with the necessary augmentation in personnel and equipment, for subordinate units committed in the objective area; to furnish administration for a Special Forces Group.²⁴

Initially, the Headquarters and Headquarters Company was basically a "paper organization," for when Colonel Aaron Bank left OCPW to join the 10th Group on 19 June 1952 as its first commander, he had a total complement of only 7 enlisted men and 1 warrant officer present for duty.²⁵

If Bank expected volunteers to swamp his new unit, he was to be disappointed. By early July he complained that the flow of applications for Special Forces was slow, attributing this to less-than-enthusiastic Army-wide support for the program and to the security classification of Special Forces activities.²⁶ A month later Colonel Karlstad reported to General McClure that the total assigned enlisted strength of the 10th was 259, of which only 123 were "operational unit" volunteer personnel. The arrival rate of volunteers was, he felt, "wholly unsatisfactory."²⁷ Another factor inhibiting a rapid buildup was the slow progress in attracting foreign nationals through the Lodge bill. As originally passed, the Lodge bill provided for the enlistment of 2,500 aliens in the US Army. By mid-1951, the Army raised this ceiling to 12,500 but actual recruitment fell far short of expectations. By August 1952, of 5,272 men who had applied for enlistment, only 411 received the necessary security clearances, and of that number only 211 actually enlisted.²⁸ Concerned, McClure's office reported that "the need to increase Lodge bill enlistments remains a vital problem affecting the accomplishment of missions assigned to OCPW."²⁹ At the end of November 1952, however, only 22 Lodge bill personnel had been assigned to the 10th Special Forces Group.³⁰ Despite this disappointing start, by April 1953 the strength of the organization designed to implement a "new concept" had increased to 1,700 officers and enlisted men.³¹

The "new concept" is best illustrated by the training objective proposed for the newly activated 10th Special Forces Group:

To infiltrate its component operational detachments to designated areas within the enemy's sphere of influence and organize the indigenous guerrilla potential on a quasimilitary or a military basis for tactical and strategic exploitation in conjunction with our land, sea and air forces.³²

Clearly, Special Forces were designed for unconventional warfare, with emphasis on guerrilla operations. This is significant, because in 1952 little

attention was given to counter guerrilla, or counterinsurgency, operations. That portion of the special warfare concept was to come later, in the late 1950's and early 1960's, initiating a doctrinal battle about the proper function of Special Forces. At this early stage of its history, however, Special Forces served unconventional warfare requirements. The framework for the 10th that resulted was a unique blend of Army organizational traditions and conventions with the prominent ideas and principles of guerrilla warfare.

Essentially, the Special Forces Group represented a pool of trained manpower from which units or combinations of units could be drawn to execute specific unconventional warfare missions. The heart of the original group organization was the Operational Detachment, Regiment, a 15-man unit established along the same lines as the OSS Operational Group. Commanded by a captain, with a first lieutenant as executive officer, the Operational Detachment, Regiment, contained 13 enlisted men and was capable of infiltrating behind enemy lines to organize, train, and direct friendly resistance forces in the conduct of unconventional warfare. Depending on the size and makeup of the guerrilla forces in a specific area, the Operational Detachment, District B (commanded by a major), or the Operational Detachment, District A (commanded by a lieutenant colonel) could also be employed, as could be a combination of three types of teams. In other words, these detachments, called "teams," were to be utilized singly or in various combinations, depending on the size and complexities of the specific guerrilla organization involved. The team, in whatever combination necessary, would come under the direct control of the specified theater command for briefing and infiltration into the objective area, then remain in radio communication with the theater headquarters so that the activities of the guerrilla organization could be directed to support operations of friendly conventional forces most effectively. In short, the Special Forces Group was not designed to be employed as a tactical entity—as, for instance, a conventional division or brigade might be—but rather was constructed around a cellular concept in which each area, district, and regimental detachment was viewed as a separate and distinct operating unit.³³

Colonel Bank had assumed command of a unique organization in June 1952, one that required special training to fulfill the missions envisaged for Special Forces. Based primarily on the wartime experiences of a few former OSS officers in the unit, the 10th Special Forces Group developed a training program that was entirely new to the Army. Early training stressed the individual skills represented in the basic Operational Detachment, Regiment: operations and intelligence, light and heavy weapons,

demolitions, radio communications, and medical aid. Each man trained thoroughly in his particular specialty, then participated in "cross-training" to learn the rudiments of the other skills represented in the detachment. The communications and medical aid specialists received the longest training courses since they required the most technical skills. Clandestine operations training in activities such as the formation and operation of intelligence, sabotage, escape and evasion, and security also was stressed, since, as Colonel Bank remarked, "these are easily neglected in favor of the more exciting guerrilla tactics."³⁴ Detachment training at Camp McKall, North Carolina, followed the individual and cross-training phase. Finally, a lengthy group-level maneuver in the Chattahoochee National Forest, Georgia, completed the initial training cycle for this new organization.

And so blossomed Special Forces, the first formal US Army capability for unconventional warfare, co-located with, but yet a junior partner to, psychological warfare at Fort Bragg. Was this marriage between psychological and unconventional warfare one of choice? Apparently not. Colonel Volckmann remembered:

Those of us who had worked on these programs were primarily interested in Special Forces and not Psychological Warfare and were very much opposed to have Special Forces associated with and under the Psychological Warfare Center at Fort Bragg. We felt that there was in general a stigma connected with Psychological Warfare, especially among combat men, that we didn't care to have "rub off" on Special Forces. Behind-the-line operations and the "dirty-tricks game" had enough opposition amongst conventional military minds that had to be overcome without adding the additional problems inherent in Psychological Warfare. However, we lost that battle.³⁵

Colonel Bank had similar misgivings. Shortly after taking command of the 10th, he differed with the Psychological Warfare School faculty concerning the "position of Special Forces in relation to psychological warfare." He discovered that the concept being taught in the Psychological Operations course was that Special Forces operations were a part of psychological warfare. Bank objected to this interpretation in an early organizational meeting at the Psychological Warfare Center:

I don't believe that, as far as Special Forces is concerned, that is correct. All the time that I was on the staff of PSYWAR (OCPW) I never saw any paper of any kind that indicates Special Forces operations is a part of psychological warfare. It is our concept that Special Forces operations is a part of unconventional warfare. Just because OCPW is responsible for the monitoring and supervision of planning

and conduct of psychological warfare and special forces operations does not mean that they have to be the same.³⁶

Interestingly, at about this same time a Reserve officer doing his annual 2 weeks' training at the Department of the Army took issue with the notion of even combining the two fields within the Office of the Chief of Psychological Warfare. Colonel Oliver Jackson Sands' view was that the kinds of background, education, training, and experience required were inherently different from those necessary for the conduct of special operations; thus "rarely . . . is a person who is suitable for one of these activities qualified for the other." He also argued that the planning, execution, facilities, equipment, and support required for the two operations were "totally different." Because these activities were, in his view, "widely divergent in type and character," he recommended divesting OCPW of the Special Forces function. The latter could then become part of the G-3.³⁷

As might have been expected, General McClure did not agree with Sands' analysis, particularly since the special operations function had been moved from G-3 to OCPW at his request. There is evidence, however, that other psychological warfare officers also had misgivings about the Army's organization for psychological and unconventional warfare. Writing in 1954 on tactical psychological warfare during the Korean conflict, Colonel Donald F. Hall expressed this view:

Many psychological warfare officers experienced in combat propaganda operations have never subscribed to the placement of psychological warfare and special forces under the same controlling staff agencies. Some have felt that a great error was made when the two functions were placed under the same agency at Department of the Army level, and there has been a growing concern about the tendency to combine the two on down through the echelons to the Army in the field.

The doubt as to the justification for this concept has been an honest one although few have had the capacity to question the decision in high places. As a matter of economy in meeting training requirements, most have gone quietly along with the development of the two functions as "twin activities" at the higher levels, and particularly at the center [The Psychological Warfare Center]. But it is difficult to conceive of guerrilla-type operations as true psychological warfare; they seem to be much more closely allied to straight combat operations within the jurisdiction of G-3.³⁸

Believing, as did Colonel Sands, that there were few individuals who would have wide experience and capabilities in both psychological and

unconventional warfare, Colonel Hall feared that if the two fields were combined under one head, one of them "may suffer as a result of particular emphasis given to the function in which the controlling personnel are especially interested and experienced."³⁹ This, of course, was part of the anxiety suffered by Special Forces adherents in 1952; at that time the "controlling personnel," both at OCPW and at the Psychological Warfare Center, were those with psychological warfare backgrounds. (In later years, the situation would be reversed, especially at the center.) From early 1951 on, Volckmann and others in the Special Operations Division had spoken primarily in terms of a Special Forces Training Center, not a Psychological Warfare Center in which Special Forces would be relegated to a subordinate role. But, as Volckmann admitted, "We lost that battle."

Indeed they did. But why? Could it have been because there was an even greater "stigma" attached "by conventional military minds" to unconventional warfare than to psychological warfare? Staff representation for psychological warfare had existed at the Department of the Army and in overseas theaters during World War I, World War II, and Korea. In addition, a definite lineage of formal Army units existed from both the Korean war and World War II, when the Army had staff sections and units designed exclusively for the planning and conduct of psychological warfare. To be sure, as Daniel Lerner has shown in his *Sykewar*, psychological warfare in World War II had its share of "characters" who tended to alienate military professionals.⁴⁰ But the major point here is that the Army had staff sections and units designed exclusively for the planning and conduct of psychological warfare, an activity that gradually gained respectability in both World War II and Korea. Such was not the case with Special Forces and unconventional warfare in the Army; unconventional warfare's only real ancestry—and that indirectly—was with the civilian-led OSS in World War II, an organization not held in the highest esteem by many senior military leaders.

Viewed from a historical perspective, it seems clear that Special Forces emerged as an unprecedented entity within the Army under the protective wing of an established, ongoing activity—psychological warfare. General McClure's foresight in organizing a Special Operations Division in the Office of the Chief of Psychological Warfare, and his selection of personnel for that division, gave unconventional warfare advocates like Bank and Volckmann the official platform from which to "sell" the Army on the need for Special Forces units. McClure's rationale for including unconventional warfare with psychological warfare can reasonably be linked to his World War II experience with PWD/SHAEF, his knowledge

of General Donovan's insistence on the close interrelationship of psychological warfare and special operations, and the fact that the other services—as well as the JCS—had the same organizational philosophy in their staffs.⁴¹ Although it is apparent that key officers in the Special Operations Division wanted to dissociate unconventional and psychological warfare, without McClure's stature and backing as a general officer heading a special staff division at Department of the Army Headquarters, it is improbable that Special Forces would have become a reality at the time that it did. Special Forces and unconventional warfare arrived through the back door of the psychological warfare house. While the marriage of psychological and unconventional warfare was probably a union of convenience (as Colonel Volckmann suggested) rather than choice, it was certainly one of necessity for the Special Forces adherents.

Thus was created the Psychological Warfare Center and the 10th Special Forces Group—the origins of special warfare.

IX

SUMMING UP

Our quest to determine the origins of a special warfare capability for the US Army has led us to investigate the pre-1952 roots of the Psychological Warfare Center at Fort Bragg. In doing so, we have traced the modern historical antecedents of American experience with psychological and unconventional warfare. These two elements had a common point of origin with the establishment of the Coordinator of Information (COI) in 1941; indeed, General William J. Donovan's all-encompassing concept of psychological warfare included all the aspects of what the Army was later to call "special warfare" (with the exception of counterinsurgency). With the dissolution of COI in 1942 and the parallel creation of Office of Strategic Services (OSS) and Office of War Information (OWI), psychological and unconventional warfare took separate paths. They did not formally unite in the Army until the formation of the Office of the Chief of Psychological Warfare (OCPW) in 1951 and the founding of the Psychological Warfare Center in 1952.

Between 1941 and 1952, psychological warfare developed a formal lineage in the Army traceable through units and schools in World War II, the Korean conflict, the Army General School at Fort Riley, and the Psychological Warfare Center at Fort Bragg. Additionally, there had been Department of the Army staff representation for psychological warfare during World War I, and, again, almost continuously since 1941. Psychological warfare, in other words, had a tradition in the Army.

It was a civilian—Assistant Secretary of War, John J. McCloy—who pushed the Army into developing a branch at the War Department for the planning and coordination of psychological warfare activities, initially in June 1941 and again in November 1943. McCloy's interest illustrates a theme seen throughout our investigation of the origins of special warfare:

the initiative demonstrated by influential civilian officials to prod somewhat conservative Army leaders into venturing forth in new and uncertain fields.

Certainly Brigadier General Robert A. McClure was an exception to this theme. The civilian-military team that he headed first in North Africa and then later in PWD/SHAFF, served as the model for successful Army psychological warfare operations. The Mobile Radio Broadcasting companies employed in Europe were the first tactical propaganda units of their kind in Army history and influenced the development of similar units during the Korean war. And McClure himself had a strong hand in urging that the War Department establish a central psychological warfare agency. All in all, General McClure must be considered the most important Army officer to emerge in this new field during World War II.

Contrary to the official lineage of Special Forces, unconventional warfare, in its strictest definition, did not have a traceable formal history in the Army. The Office of Strategic Services, to which the Army contributed personnel in World War II, was the first American agency devoted to the planning, direction, and conduct of unconventional warfare, but it was not a military organization. Nevertheless, it left a legacy of organizational and combat knowledge that, together with a few key officers who had World War II experience in guerrilla warfare, was instrumental in the creation of Special Forces in 1952. This gave the Army a formal unconventional warfare capability for the first time in its history.

During the interwar years, the Army's psychological warfare capability languished, but staff planning activity did not cease entirely (contrary to the claim of one prominent psychological warfare text).¹ This activity was kept alive by growing concerns about Soviet intentions, by the interest of a few senior military officers like General Lemnitzer and General McClure, and by the pressure brought to bear by several Secretaries of the Army. In fact, a great deal of planning went on during that period that carried over to OCPW, more so than was later acknowledged by General McClure even though he substantially contributed to that effort from his posts outside the Army Staff.

Similarly, the impetus for the initiation of covert activities after World War II did not originate in the Central Intelligence Group (forerunner of the CIA); it came from Secretary of War Robert Patterson, whose interest in developing an OSS-type "airborne reconnaissance" unit led the Army to study an organization that combined both OSS and Ranger precepts. Although interest in the subject waned after the growth of the responsibilities of the Central Intelligence Agency/Office of Policy Coordination

(CIA/OPC), the studies and dialog that took place—limited though they were—clearly showed the influence of OSS on Army thinking and presaged similar discussions in the early 1950's prior to formation of the 10th Special Forces Group.

Notwithstanding that more planning activity in both psychological and unconventional warfare took place during 1945-50 than is generally acknowledged, on the eve of the Korean war the Army was ill-prepared in terms of personnel, equipment, and organization to conduct psychological warfare operations; its unconventional warfare capability was nonexistent.

With the impetus of the Korean war, the heightening cold war tensions, and the persistent pressures of Secretary of the Army Frank Pace, Jr., the Army moved in late 1950 to create an unprecedented staff organization—the Office of the Chief of Psychological Warfare. With Pace's support, Brigadier General McClure created a staff with responsibilities for both psychological and unconventional warfare. It was largely as a result of McClure's status and foresight that the Army developed its first capability to conduct unconventional warfare; the inclusion of a Special Operations Division in OCPW and McClure's selection of the key personnel for that office gave officers like Colonel Russell Volckmann and Colonel Aaron Bank the opportunity to form plans for unconventional warfare and the creation of Special Forces. Despite a "hot war" in Korea, the primary influence behind the Army's interest in unconventional warfare was the desire for a guerrilla capability in Europe to help "retard" a Soviet invasion, should it occur. (In fact, the development of Special Forces came too late to play other than a minimal role in the 8th Army's behind-the-line activities.) After some initial experimentation with the organizational machinery to conduct this "new concept" of warfare, the unit that emerged was clearly designed to organize, train, and support indigenous personnel in behind-the-lines resistance activities, and it was based primarily on Donovan's OSS Operational Group concepts—not those of the Rangers or Commandos. In order to provide the necessary training, materiel, and doctrinal support for both Special Forces and psychological warfare units, McClure was able to sell the Army on a separate center at which the functions of the "whole field of OCPW" would be located.

Roughly the same cold war tensions fueled interest in both psychological and unconventional warfare, but there was a crucial difference in the receptivity to each by the Army. Despite some of the "characters" associated with "sykewar," psychological warfare organizations gradually attained increased respectability in the Army during World War II and Korea. On the other hand, the Army continued to view unconventional

warfare with a certain distaste. This reluctance to accept Special Forces resulted from the legacy of OSS-military rivalry during World War II, a lack of appreciation for unconventional warfare by officers trained for conventional war, and a continuing suspicion of elite forces by the Army, as well as from the fact that there was no formal precedent in the Army's history for Special Forces units. Most important of all were the constraints of manpower and money in what was, despite the cold war, a peacetime Army. New ideas, particularly those that require an increase in personnel and funds, are understandably difficult to sell to leaders who must make decisions on the basis of essentiality. (In this regard, it is instructive to note that the spaces finally made available for the formation of the 10th Special Forces Group came from the deactivation of the Rangers, another elite concept.)

In the face of resistance, both within the Army and from the Air Force and CIA, Special Forces nonetheless became a reality largely through the support of General McClure and the persistent efforts of Colonel Volckmann and Colonel Bank. But the bargaining position of unconventional warfare advocates was weak in 1951-52; those in OCPW who wanted a separate existence for Special Forces found it necessary to compromise. Because psychological warfare had a formal lineage and a tradition—and unconventional warfare had neither—it was expedient to bring Special Forces into existence under the auspices of, and subordinate to, psychological warfare. This, plus the security restraints placed on the publicizing of Special Forces activities, explains the apparent ascendancy of psychological warfare over unconventional warfare at that time.

General McClure's rationale for combining these two activities within OCPW in 1951 and at the Psychological Warfare Center in 1952 can be partially attributed to the heritage of General William Donovan's organizational philosophy, and to the fact that the other military services and the JCS had the same combination in their staffs. In allowing McClure his way, the Army may simply have found it convenient to lump these two relatively new out-of-the-mainstream (thus "unconventional") activities together while it attempted to sort out both ideas and weapons. The resultant package could well have been called "miscellaneous warfare" instead of the eventual, more glamorous "special warfare."² Thus, the combining of psychological and unconventional warfare under the Psychological Warfare Center was a marriage of both convenience and necessity, but one that nevertheless gave the Army the beginnings of a "special warfare" capability.

The person most responsible for achieving this feat was Brigadier General Robert A. McClure, clearly the central figure to emerge in this study. From World War II until early 1953, he alone provided the continuity, expertise, and guidance at the general officer level that was so essential to the ultimate establishment of his dream—the creation of the Office of the Chief of Psychological Warfare, Special Forces, and the Psychological Warfare Center. At every crucial point in the unfolding of events leading to these accomplishments, particularly after World War II, one finds his personal imprint; indeed, the story of the origins of special warfare could almost be told through a biography of this dedicated, energetic visionary. Today his name is recognized by few; the achievements of Volckmann and Bank are more familiar. One searches in vain for McClure's picture on the walls of the Center for Military Assistance or in its museum. But if any one man can be called the father of special warfare, surely that man was Robert A. McClure.

Even after its birth, the Psychological Warfare Center, along with Special Forces, led a precarious existence.³ And McClure himself left the OCPW in March 1953 an embittered man; the implication was that he had been in a specialized activity too long.⁴ But his legacy is clear; the foundation he laid was built upon in the 1960's when special warfare was expanded to encompass counterinsurgency, and to this day Special Forces and psychological warfare units exist, albeit uneasily, under the Center for Military Assistance at Fort Bragg. Ironically, the Office of the Chief of Psychological Warfare has not survived. The manner in which psychological and unconventional warfare evolved from 1941 until their union as a formal Army capability in 1952 suggests a theme that runs throughout the history of special warfare: the story of a hesitant and reluctant Army attempting to cope with concepts and organizations of an unconventional nature.

NOTES

Archival collections cited in notes are abbreviated as follows:

CMH	Center of Military History, Washington, D.C.
National Archives	National Archives, Washington, D.C.
USAJFKCMA	US Army John F. Kennedy Center for Military Assistance, Fort Bragg, N.C.
USAMHI	US Army Military History Institute, Carlisle Barracks, Pa.
WNRC	Washington National Records Center, Suitland, Md.

Some files are designated Top Secret (TS), Secret (S), or Confidential (C).

For other abbreviations and acronyms appearing in the notes, see the glossary.

Aaron Bank, Commanding Officer, filed with Psy War 220.3 (14 May 1953), Record Group 319, Army-Chief of Special Warfare, 1951-54, National Archives; Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Letter to Maj. Gen. Riley F. Ennis, Assistant Chief of Staff, G-2, GHQ, FECOM, from Col. William J. Blythe, Chief, Special Forces Division, 24 November 1952, Record Group 319, Army-Chief of Special Warfare, 1951-54, National Archives; Office of the Chief of Psychological Warfare, Message DA 927709 to CINCFE, 2 January 1953, Record Group 319, Army-Chief of Special Warfare, TS Decimal Files, 1951-54, box 15, Psy War 370.64 TS (13 December 1952), National Archives; Office of the Chief of Psychological Warfare, Memorandum for Record, subject: Conversation with Gen. Maxwell D. Taylor reference Special Forces Operations in the Far East Command, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 319, Psy War 337 TS (26 December 1952), National Archives; interview with Robert Bodroghy, 15 May 1979.

67. The Joint Chiefs of Staff, Joint Subsidiary Plans Division, Washington, D.C., Memorandum for Chief, Joint Subsidiary Plans Division, subject: Report on Trip to FECOM, 26 November-17 December 1951, by Col. W. H. S. Wright, US Army, 20 December 1951, filed with Psy War 333 TS (20 December 1951), Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 323.3-333, box 9, National Archives.

68. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Disposition Form to G-1, G-2, G-3, subject: The Status and Role of "Partisan Forces," 18 February 1953, from Brig. Gen. Robert A. McClure with G-3 response, 20 February 1953, by Maj. Gen. C. D. Eddleman, Record Group 319, Army-Chief of Special Warfare, TS Decimal Files, 1951-54, 383.7-385, box 20, Psy War 384 FE TS (18 February 1953), National Archives.

69. Department of the Army, Office of the Chief of Staff, Washington, D.C., Letter from Gen. J. Lawton Collins to Gen. Mark Clark, 19 February 1953, filed with Psy War 370.64 TS (19 February 1953), Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 370.2-370.64, box 15, National Archives; Headquarters, Far East Command, Office of the Commander in Chief, Letter from Gen. Mark Clark to Gen. J. Lawton Collins, 12 March 1953, filed with Psy War 370.64 TS (9 April 1953), Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 370.2-370.64, box 15, National Archives.

Chapter VII Notes

1. Headquarters, European Command, Letter from Maj. Gen. Daniel Noce, Chief of Staff, to Brig. Gen. Robert A. McClure, 13 December 1950, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 6, Psy War 091.412 TS (13 December 1950, 15 January 1951), National Archives.

2. Department of the Army, G-3 Operations, Washington, D.C., Letter to Maj. Gen. Daniel Noce, Chief of Staff, EUCOM, from Brig. Gen. Robert A. McClure, 15 January 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 6, Psy War 091.412 TS (13 December 1950, 15 January 1951), National Archives.

3. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., letter from Brig. Gen. Robert A. McClure to Maj. Gen. Daniel Noce, 12 June 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 6, Psy War 091.412 TS (12 June 1951), National Archives.

4. See note 3 above, Headquarters, European Command, Letter from Lt. Col. R. G. Ciccolella, Chief, Psy War Section, Special Plans Branch, Operations, Plans, Organization and Training Division, to Brig. Gen. Robert A. McClure, 15 October 1951, Psy War 337, National Archives; Letter from Lt. Col. R. G. Ciccolella to McClure, 14 November 1951, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 385.2-400, box 24, Psy War 400 (14 November 1951) S, National Archives; Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Progress Report—1 April 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, Psy War 319.1, National Archives.

5. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Letter from Brig. Gen. Robert A. McClure to Maj. Gen. Charles A. Willoughby, G-2, General Headquarters, Far East Command, 10 March 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, Psy War 091.412, National Archives; also Psy War 322 (19 February 1951), Request for Increase in Authorized Strength of Psy War Units, Psy War 322 (28 February 1951), RB&L Group for FECOM, and Psy War 322 (5 March 1951), Reduced Strength RB&L Group for EUCOM, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 322-326, box 13, National Archives.

6. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Record, subject: Meeting called by Colonel Hopkins, JSPD, by Lt. Col. Richard Hirsch, Intelligence and Evaluation Branch, 2 August 1951, Record Group 319 Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 6, Psy War 091.412, National Archives.

7. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Record, Staff Meeting, 6 December 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, Psy War 020 Staff Meetings, National Archives; Memorandum for Chief of Staff, US Army, subject: Psychological Warfare Conference EUCOM, 27-28 November 1951, by Brig. Gen. Robert A. McClure, 6 December 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, Psy War 334S (6 December 1951), National Archives.

8. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Record, Weekly Staff Meeting, 8 March 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, Psy War 020 Staff Meetings, National Archives.

9. Interview with Col. John B. B. Trussell, US Army (Ret.), at Carlisle Barracks, Pa., 7 May 1979. Colonel Trussell, as a lieutenant colonel, was a staff officer in OCPW during the early 1950's.

10. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum from Captain Hahn, US Navy, to Deputy Chief of Naval Operations, subject: Air Force Views Relating to Retardation (of Soviet Advances), 20 October 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 15, Psy War 381, National Archives; see also Psy War 350.001 TS (7 January 1952), subject: Psychological Warfare Presentation for PSB, TS Decimal Files, 1951-54, box 13, and Psy War 385 TS (29 August 1951), subject: Appraisal of Capabilities of Psychological Operations in Department of Defense, TS Decimal Files, box 20, National Archives.

11. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Chief of Staff, US Army, subject: Psychological Warfare Conference, EUCOM, 27-28 November 1951, by Brig. Gen. Robert A. McClure, 6 December 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, Psy War 334 S (6 December 1951), National Archives.

12. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Letter from Maj. Kenneth B. Stark to Lt. Col. Homer E. Shields, 12 March 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, National Archives.

13. Linebarger, *Psychological Warfare*, p. 304; Letter, Col. Otis E. Hayes, Jr. (Ret.), 5 May 1969, to Office of Information, John F. Kennedy Center for Special Warfare, USAJFKCMA (Public Affairs Office); Army General School, Fort Riley, Kans., "Program of Instruction, Psychological Warfare Unit Officer Course," January 1951, p. i, USAJFKCMA.

14. Army General School, Fort Riley, Kans., "Program of Instruction for Psychological Warfare Officer Course," August 1951, p. 12, USAJFKCMA; Letter, Col. Otis E. Hayes, 5 May 1969, to Office of Information, USAJFKCMA (Public Affairs Office). Colonel Hayes was recalled to active duty in 1951 as Deputy of the Psychological Warfare Division at Fort Riley. After the Psychological Warfare Center was activated at Fort Bragg in 1952, he became the first Director of the Psychological Operations Department (in the Psychological Warfare School) and remained in that position for 18 months.

15. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Progress Report, Personnel and Training Division, 1 April 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, Psy War 319.1, National Archives; Office of the Chief of Psychological Warfare, Letter to Lt. Col. John W. White, G-3 Section, Headquarters, 1st Army, Governor's Island, N.Y., from Brig. Gen. Robert A. McClure, 24 May 1951, Psy War 320.2, National Archives.

16. Department of the Army, Operations Research Office, Washington, D.C., Letter from Ellis A. Johnson, Director, to Brig. Gen. Robert A. McClure, subject:

Research for Psychological Warfare, 8 May 1951, Psy War 400.112; Office of the Chief of Psychological Warfare, Memorandum for Chief, Psychological Warfare, subject: Non-materiel Research Program, 7 February 1951, from Lt. Col. Jerome G. Sacks, Research Branch, filed with Psy War 400.112 (29 February 1951); Office of the Secretary of the Army, Memorandum for the Secretary of Defense, subject: Appraisal of Capabilities of Psychological Operations in Department of Defense, from Secretary Frank Pace, Jr., 21 September 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 20, Psy War 385 TS, National Archives.

17. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., "Briefing for Secretary of Defense on OCPW Activities," 5 November 1951, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 334-337, Psy War 337 S (5 November 1951), National Archives.

18. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum to Office of the Chief of Staff of the Army, subject: Reduction of Military and Civilian Personnel in the Chief of Staff area, 27 August 1951, Record Group 319, Army-Chief of Special Warfare, SECRET Decimal Files, 1951-54, 092-230, box 9, Psy War 230 (17 August 1951), National Archives; interview with Col. John B. B. Trussell, 9 May 1979.

19. Interview with Col. John B. B. Trussell, 9 May 1979.

20. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Weekly Staff Meeting, 8 March 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, National Archives.

21. Letter, Brig. Gen. Russell W. Volckmann (Ret.), 21 March 1969, to Office of Information, John F. Kennedy Center for Special Warfare, USAJFKCMA (Public Affairs Office); Letters, Col. Aaron Bank (Ret.), 17 February 1968 and 3 April 1968, to Office of Information, John F. Kennedy Center for Special Warfare, USAJFKCMA (Public Affairs Office).

22. Letter, Volckmann, 21 March 1969 (see note 21 above).

23. Letters, Volckmann and Bank (see note 21 above).

24. Letter, Col. Aaron Bank (Ret.), 23 February 1969, to Office of Information, John F. Kennedy Center for Special Warfare, USAJFKCMA (Public Affairs Office).

25. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Minutes of Staff Meetings, 29 March 1951 and 19 July 1959, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, National Archives. These frequent changes of division chief designations were probably due to the relative date of rank, or seniority, among the colonels brought into the Special Operations Division.

26. See note 24 above.

27. Department of the Army, Office of the G-3, Washington, D.C., Memorandum for Director, O&T Division, subject: Responsibilities of Army with Respect to Guerrilla Warfare, 20 March 1951, by Maj. Gen. Maxwell D. Taylor, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 370.2-370.64, box 15, Psy War 370.64 TS (20 March 1951), National Archives.

28. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Minutes of Weekly Staff Meeting, 8 March 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, National Archives.

29. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for the Assistant Chief of Staff, G-2, subject: Reports on Special Operations in Korea, 15 March 1951, by Brig. Gen. Robert A. McClure, Record Group 319, Psy War Admin Office, Records Branch, 1951-54, box 6, Psy War 091 Korea (15 March 1951), National Archives.

30. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Minutes of Weekly Staff Meeting, 29 March 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, National Archives.

31. Headquarters, The Infantry School, Fort Benning, Ga., Memorandum to the Commanding General, Infantry Center, subject: Analysis and Suggestions re Gen. J. Lawton Collins' Conference, 5 April 1951, from Lt. Col. Russell W. Volckmann, 9 April 1951, filed with Psy War 337 TS (16 April 1951), Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 12, National Archives.

32. See note 31 above.

33. See note 31 above.

34. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Gen. Maxwell D. Taylor, Assistant Chief of Staff, G-3, subject: Definitions Relating to Psychological Warfare, Special Operations and Guerrilla Warfare, 17 April 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, Psy War 370.64 (17 April 1951), National Archives.

35. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Summary Sheet of Chief of Staff, subject: Gen. J. Lawton Collins' Conference at the Infantry Center, 5 April 1951, from Col. Edward Glavin, Acting Chief of Psychological Warfare (summary sheet prepared by Lt. Col. Russell W. Volckmann), 16 April 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, Psy War 337 (16 April 1951), National Archives.

36. See note 35 above; see also Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Briefing Notes, Conference with G-1, -2, -3, -4, and AFF re Training in the Field of Special (Forces) Operations, 21 June 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 12, Psy War 337 TS (21 June 1951), National Archives. The studies resulting from this action, in addition to "Army Responsibilities in Report to Special (Forces) Operations," were "Theater Special Forces Command and (Z.I.) Special Forces Training Command"; "Special Forces Ranger Units—and—Special Forces Ranger Units, Recruiting and Training of Personnel"; "Rear Area Defense"; and "Executive Agent for the Joint Chiefs of Staff for Matters Pertaining to Guerrilla Warfare."

37. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Gen. C. D. Eddleman, subject: Utilization of Lodge Bill Recruits in Special (Forces) Operations, 23 May 1951, from Brig. Gen.

Robert A. McClure, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 370.2-370.64, box 15, Psy War 373.2 TS (23 May 1951), National Archives.

38. See note 37 above.

39. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum to Assistant Chief of Staff, G-3, subject: Staff Studies, "Special Forces Ranger Units" and "Special Forces Ranger Units, Recruiting and Training of Personnel," 12 June 1951, from Brig. Gen. Robert A. McClure, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 270.2-370.64, box 15, Psy War 370.64 (12 June 1951), National Archives.

40. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Briefing Notes, Conference with G-1, -2, -3, -4 and AFF re Training in the Field of Special (Forces) Operations, 21 June 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 12, Psy War 337 TS (21 June 1951), National Archives. Additionally, Lieutenant Colonel Volckmann had earlier reiterated to McClure the conclusion "that a need exists for a training command or center that will bring together the many segments of special (forces) operations under a program that will fully develop doctrine, policies, techniques, and tactics . . . and that will develop equipment and supplies." This came after a trip, directed by McClure, to observe training and instruction at the CIA's "School Number One," the Ranger Training Center, and the Infantry Center—all at Fort Benning. Office of the Chief of Psychological Warfare, Memorandum for Brig. Gen. Robert A. McClure, subject: Findings and Recommendations re Special Operations Training, Fort Benning, Ga., 24 April 1951, by Lt. Col. Russell W. Volckmann, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 370.2-370.64, box 15, Psy War 370.64 TS (3 May 1951), National Archives.

41. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Brig. Gen. Robert A. McClure, subject: Ranger Units, 17 July 1951, from Col. Wendell W. Fertig, Chief, Special Operations, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 322-326, box 13, Psy War 322 S (17 July 1951), National Archives.

42. See note 41 above; see also Eliot A. Cohen, *Commandos and Politicians: Elite Military Units in Modern Democracies* (Cambridge: Center for International Affairs, Harvard University, 1978), pp. 56-58.

43. Department of the Army, Office of the Chief of Psychological Warfare.

44. Adjutant General, Army Field Forces, Letter to Adjutant General, Department of the Army, subject: Training of Individuals and Units of the Army in Special (Forces) Operations, 23 August 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, box 6, 091.412 TS Propaganda (23 August 1951), National Archives.

45. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Record, subject: Conference to Resolve Ranger Program, 24 August 1951, by Col. Aaron Bank, Special Operations Division, Record Group 319, Psy War 337 (24 August 1951), National Archives. The

principals attending the conference were General Taylor, General Bradford, G-3, AFF, and General McAuliffe, G-1.

46. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Assistant Chief of Staff, G-3, subject: Request for Spaces in the Active Army, 28 September 1951, from Brig. Gen. Robert A. McClure, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 311.5-319.1, box 11, Psy War 320.2 (28 September 1951), National Archives.

47. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum to Assistant Chief of Staff, G-3, subject: Table of Organization and Equipment 33-510 (proposed) for Special Forces Group (Abn), 13 November 1952, with draft 1st Ind letter to OCAFF, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 8, Psy War 320.3 TS (30 September 1952), National Archives.

48. Headquarters, European Command, Letter to Brig. Gen. Robert A. McClure, 12 November 1952, from Brig. Gen. Willard K. Liebel, Chief, Support Plans Branch, J-3, Psy War 240 (12 November 1952); Office of the Chief of Psychological Warfare, Letter to Brigadier General Liebel, 8 December 1952, from McClure, Psy War 290 (8 December 1952); Office of the Chief of Psychological Warfare, Letter to General Liebel from General McClure, 19 December 1952, Psy War 290 (19 December 1952); all filed in Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 6, National Archives.

49. Cohen, *Commandos and Politicians*, particularly his discussion of "The Specialist Function," pp. 30f.

50. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Brig. Gen. Robert A. McClure, subject: Findings and Recommendations re Special Operations Training, Fort Benning, Ga., from Lt. Col. Russell W. Volckmann, 24 April 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal files, 370.2-370.64, box 15, Psy War 370.64 TS (3 May 1951), National Archives. Volckmann had been directed by McClure to visit Fort Benning to review the training and instruction at the CIA's "School Number One," the Ranger Training Center, and the Infantry School, with emphasis on the special operations instruction, then report to him his findings and recommendations (see memorandum from McClure to Volckmann, 19 March 1951, filed with above reference). See also General McClure's and Colonel Bank's discussion with AFF concerning a training center, Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Minutes of Weekly Staff Meeting, 16 August 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 020 Staff Meeting, box 2, National Archives.

Robert A. McClure, 10 September 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 323.3-333, box 9, Psy War 333 (10 September 1951), National Archives.

60. The CIA's statement appeared in a memorandum dated 6 June 1952, an enclosure to JCS 1969/73, Memorandum for Chairman, JCS, subject: Overseas CIA Logistical Support Bases; see Office of the Chief of Psychological Warfare, Memorandum for the Chief of History, subject: Summary of Major Events and Problems, Psy War 314.7 TS (15 August 1953); see also Psy War 314.7 (6 January 1953), History of DA Activities, for OCPW's explanation of why the JCS disap-

proved its Special Forces Operations Plan for Europe; both are filed in Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 311-319.1, box 7, National Archives.

61. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Brig. Gen. Paul D. Harkins, subject: JSPC 808/112, Command Relationships between the CIA/OPC Organization and the Armed Forces in Actual Theaters of War Where American Forces Are Engaged (29 December 1952), from Brig. Gen. Robert A. McClure, Chief of Psychological Warfare, 30 December 1952, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 000.1-020, box 1, National Archives. General Harkins was the "Army Planner," a senior officer responsible for presenting the Army's position on JCS actions.

62. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Air Force Presentation to the Psychological Strategy Board on 10 January 1952, filed with Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 337-350.05, box 13, Psy War 350.001 TS (7 January 1952), National Archives.

63. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Discussions of Questions by the Under Secretary of the Army concerning Army Role in Guerrilla and Unconventional Warfare, in response to a Memorandum to the Vice Chief of Staff, subject: Guerrilla Warfare, 11 April 1952, filed with Psy War 320.64 TS (3 May 1952) (12 May 1952), TS Decimal Files, 1951-54, box 15, National Archives.

64. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Minutes of Meeting, 5 September 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 12, Psy War 337 TS (5 September 1951), National Archives.

65. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Gen. J. Lawton Collins, Chief of Staff, subject: Staff Visit to Europe, from Brig. Gen. Robert A. McClure, 12 September 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 323.3-333, box 9, Psy War 333 (10 September 1951), National Archives.

66. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for the Chief of Staff, US Army, subject: Unconventional Warfare (Special Forces Operations) Discussions Held at EUCOM and SHAPE, from Brig. Gen. Robert A. McClure, 5 December 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 370.2-370.64, box 15, Psy War 370.64 TS (5 December 1951), National Archives.

67. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum to the Chief of Military History, subject: Summary of Major Activities of OCPW for Period 9 September 1951 to 31 December 1952, 7 April 1953. JCS Decision 1969/18, 27 March 1952, Responsibilities of the Services and the Joint Chiefs of Staff for Guerrilla Warfare, assigned to the Army primary responsibility for guerrilla warfare in combat operations on land. The decision also assigned to the Army primary responsibility for developing, in coordination with the other services and subject to JCS policy direction, the doctrine, tactics, techniques, procedures, and equipment employed by guerrilla forces in

combat operations on land, and for training these forces with the assistance of the other services. Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal File, 311-319.1, box 7, Psy War 314.7 (6 January 1953), National Archives.

68. General Collins' directive remained in effect for 9 months until March 1952. At that time, after considerable interservice battling, the JCS assigned the Army primary responsibility for guerrilla warfare. See note 67 above; see also the briefing by Brig. Gen. Bullock (McClure's replacement as Chief, OCPW) to the Chief, Army Field Services, at Fort Monroe, Va., 5 October 1953, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 337-350.05, box 13, Psy War 337 TS (2 October 1953), National Archives.

69. Department of the Army, Organization and Training Division, G-3, Washington, D.C., Memorandum for the Chief of Psychological Warfare, subject: Training of Individuals and Units of the Army in Special (Forces) Operations, 14 September 1951, from Brig. Gen. D. A. D. Ogden, G-3, 370.2 TS (23 August 1951), filed with Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 370.2-370.64, box 15, Psy War 370.2 TS (14 September 1951), National Archives.

70. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Response to G-3, 370.2 TS (14 September 1951), subject: Training of Individuals and Units of the Army in Special (Forces) Operations, from Brig. Gen. Robert A. McClure, 5 October 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 370.2-370.64, box 15, filed with Psy War 370.2 TS (14 September 1951), National Archives. The minutes of the 13 September 1951 weekly OCPW staff meeting show that a plan for a Center for Psychological Warfare and Special Operations Training was being worked on, with the intent of making the necessary suggestions to AFF, who in turn could recommend to G-3 that such a center be established—an interesting, but not uncommon, bit of bureaucratic maneuvering for a pet project; Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, Psy War 020 Staff Meetings, National Archives.

71. See note 70 above, OCPW response to G-3, 5 October 1951.

72. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., "Special Forces Operations," by Col. Russell W. Volckmann, 26 October 1951, filed in Psy War 372.2 Operations, National Archives.

73. See note 72 above.

74. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., "Briefing for Secretary of Defense on OCPW Matters," 5 November 1951, by Brig. Gen. Robert A. McClure, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54 334-337, box 15, Psy War 337 S (5 November 1951), National Archives.

75. See Note 74 above.

76. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Col. D. V. Johnson, Assistant Chief, Plans Division, Office of the Assistant Chief of Staff, G-3, subject: Responsibilities of the Services and the Joint Chiefs of Staff for Unconventional Warfare, 26 October 1951, from Brig. Gen. Robert A. McClure, Record Group 319, Army-Chief of

Special Warfare, 1951-54, TS Decimal Files, 370.2-370.64, box 15, Psy War 370.64 TS (26 October 1951), National Archives.

77. Department of the Army, Training Circular 31-20-1, *The Role of US Army Special Forces*, 22 October 1976. In *Commandos and Politicians*, Eliot Cohen states that "the US Army contributed to the downfall of Special Forces by creating two Ranger battalions [in 1974-75]. These units fit the specialist model: They are relatively small forces trained for such missions as the rescue of hostages (along the lines of Israel's Entebbe Raid)" (Cohen, p. 88). These types of missions, as well as other unilateral (no indigenous personnel) Ranger or Commando-like "direct action" activities, have, however, become part of the Special Forces' growing repertoire of capabilities (Cohen somewhat inelegantly calls Special Forces "guerrilla/commandos, preparing for a variety of military odd jobs," p. 25). Cohen discusses the desire among elite units to acquire new missions and additional personnel, and concludes: "The mission of elite troops must be as rigorously defined as possible: a niche must be carved out for them and they must be kept within it" (p. 97).

78. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Minutes of Weekly Staff Meeting, 8 November 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, 020 Staff Meetings, National Archives.

79. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for the Record, subject: Survey for Psychological Warfare Center, 19 November 1951, by Col. Wendell W. Fertig, Chief, Special Operations Division; Memorandum for Brig. Gen. Robert A. McClure, subject: Status of Special Forces Training Center, 3 December 1951, by Col. Wendell W. Fertig; both filed in Psy War 322C (3 December 1951), Record Group 319, Psy War Admin Office, Records Branch, Decimal Files (C), 1951-54, National Archives. The personnel who made the initial survey of Fort Benning and Fort Bragg during the period 13 to 15 November 1951 were Col. Aaron Bank and Maj. Kenneth B. Stark of OCPW, Col. Edward Glavin of AFF, and Maj. Taylor of the G-3 Division, Psy War Section, 3d Army.

80. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Brig. Gen. Robert A. McClure, subject: Status of Special Forces Training Center, 3 December 1951, by Col. Wendell W. Fertig, Psy War 322C (3 December 1951), Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, National Archives; see also OCPW Minutes of Weekly Staff Meeting, 6 December 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, 020 Staff Meetings, National Archives.

81. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Minutes of Weekly Staff Meeting, 6 December 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, 020 Staff Meetings, National Archives.

82. See note 81 above; see also Minutes of Weekly Staff Meetings, 25 October 1951 and 8 November 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, 020 Staff Meetings, National Archives.

83. Office of the Post Engineer, Fort Bragg, N.C., Memorandum for Record, subject: Establishment of Psychological Warfare Center, 12 December 1951, by A. W. Hart, Division Chief, Record Group 319, Army-Chief of Special Warfare, File 123 Money and Savings, National Archives; Office of the Chief of Psychological Warfare, Memorandum for Record, subject: Fort Bragg Survey, 17 December 1951, from Lt. Col. Melvin R. Blair, Special Operations Division, Record Group 319, Army-Chief of Special Warfare, File 061.2 Army and Military Surveys, National Archives; Office of the Chief of Psychological Warfare, Minutes of Weekly Staff Meeting, 20 December 1951, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 020 Staff Meetings, National Archives. The survey team that selected Smoke Bomb Hill consisted of Col. Edward Glavin, AFF; Lt. Col. Melvin R. Blair and Maj. Kenneth B. Stark, OCPW; Lt. Col. John O. Weaver, Psychological Warfare Division, Army General School, Fort Riley; and Lt. Col. Brock and Maj. Taylor, 3d Army.

84. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for Brig. Gen. Robert A. McClure, subject: Psychological Warfare Presentation for PSB, 7 January 1952, from Col. Wendell W. Fertig, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, 337-350.05, box 13, Psy War 350.01 TS (7 January 1952), National Archives; Office of the Chief of Psychological Warfare, Memorandum to the Assistant Chief of Staff, G-3, subject: Funds for a Psychological Warfare Center, 14 January 1952, from Brig. Gen. Robert A. McClure, Psy War 123 (14 January 1952), National Archives; Office of the Chief of Psychological Warfare, Memorandum for the Assistant Chief of Staff, G-2, subject: Compromise of Classified Information, 22 January 1952, from Brig. Gen. Robert A. McClure, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 370.64-380.01, box 20, Psy War 380.01 C (22 January 1952), National Archives. The breach of security that annoyed McClure was the following sentence from the 21 January 1952 issue of *Newsweek*: "The Army will soon open a secret guerrilla warfare and sabotage school for military personnel and CIA agents at Fort Bragg, N.C." McClure insisted that this information had been handled within OCPW as a TOP SECRET matter, with dissemination on a "need-to-know" basis, and he therefore requested an investigation to determine the source of the leak. Although the G-2 refused to follow through on the request, the incident reveals the sensitive manner in which Special Forces activities were being handled by OCPW at this time and helps explain in part why so little publicity was given to Special Forces, including no mention of this activity in the title of the proposed center at Fort Bragg.

85. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum to the Assistant Chief of Staff, G-3, subject: Utilization of Active Army Spaces Allocated for FY 1952 and FY 1953, 6 February 1952, from Brig. Gen. Robert A. McClure, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 319.5-320.3, box 12, Psy War 320.2 (6 February 1952), National Archives.

86. See note 85 above, Comment No. 2 from Brig. Gen. G. J. Higgins, Chief, Organization and Training Division, G-3, 15 February 1952.

87. Department of the Army, Assistant Chief of Staff, G-3, Washington, D.C., Summary Sheet for Chief of Staff, US Army, subject: Establishment of Psychological Warfare and Special Forces Center, 3 March 1952, from Maj. Gen. C. D. Eddleman, Deputy Assistant Chief of Staff, G-3, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 8, Psy War 322 TS (3 March 1952), National Archives. The total personnel needs for the center itself were stated as 362, of which 312 would be military and 50 civilian. Twenty-nine spaces (27 military and 2 civilian) from the Psychological Warfare Division, Army General School, Fort Riley, would be transferred to the new center at Fort Bragg.

88. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for the Chief, Joint Subsidiary Plans Division, JCS, subject: Activation of Psychological Warfare Center at Fort Bragg, N.C., from Brig. Gen. Robert A. McClure, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 319.5-320.3, box 13, Psy War 322 (7 April 1952), National Archives.

Chapter VIII Notes

1. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for the Deputy Chief of Staff for Operations and Administration, subject: Activation and Mission of the Psychological Warfare Center, from Brig. Gen. Robert A. McClure, 22 May 1952, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 322-326, box 13, Psy War 322 (22 May 1952), National Archives. Department of the Army General Order No. 37, 14 April 1952, established the Psychological Warfare Center as a Class I activity and installation, effective 10 April 1952 (extract filed with above reference). A copy of the Recommended Table of Distribution for the Psychological Warfare Center can be found with Psy War 320.3 (16 April 1952), National Archives.

2. Office, Chief of Army Field Forces, Fort Monroe, Va., Letter, subject: Psychological Warfare Doctrine Development and Instruction, 29 May 1952, USAJFKCMA; Letter, Col. Otis E. Hays, 5 May 1969, USAJFKCMA (Public Affairs Office). An advance party from the Psychological Warfare Division, Army General School, consisting of Lt. Col. John O. Weaver with five officers and seven enlisted men was scheduled to arrive at Fort Bragg on 27 April 1952; the remainder of this division (eight officers and four enlisted men) was scheduled to move not later than 15 May 1952. See Army Field Forces letter, subject: Psy War Center, 30 April 1952, to Commanding General, 3d Army, filed with Psy War 322 (1 May 1952), National Archives.

3. Headquarters, Psychological Warfare Center, Fort Bragg, N.C., Memorandum No. 14, "Organization and Functions Manual, Headquarters, Psychological Warfare Center," 12 November 1952, p. 3, USAJFKCMA.

6. Department of the Army, Organization and Training Division, G-3, Washington, D.C., DF to Psy War, subject: Establishment of the Psychological Operations School, 27 August 1952, G-3 352 (6 August 1952), filed with Psy War 322 (25 September 1952), National Archives.

7. Headquarters, Psychological Warfare Center, Fort Bragg, N.C., Letter to the Chief of Psychological Warfare, subject: Activation of the Psychological Warfare School, 12 September 1952, USAJFKCMA; Office of the Chief of Psychological Warfare, Memorandum to the Assistant Chief of Staff, G-3, subject: Establishment of the Psychological Warfare School, 25 September 1952, Psy War 322 (25 September 1952), National Archives.

8. The Psychological Warfare School, Fort Bragg, N.C., "Guide for Staff and Faculty," April 1953, p. 10, USAJFKCMA. Additional detail on the mission of the school can be found in the Psychological Warfare Center's Memorandum No. 14, "Organization and Functions Manual," and "Administrative Information Handbook," USAJFKCMA.

9. Letter, Col. Otis E. Hays, 5 May 1969, USAJFKCMA (Public Affairs Office).

10. Headquarters, Psychological Warfare Center, Memorandum No. 14, "Organization and Functions Manual," p. 52, USAJFKCMA.

11. US, Department of Defense, *Semiannual Report of the Secretary of Defense, 1 January through 30 June 1953*, p. 140.

12. US, Department of Defense, *Semiannual Report of the Secretary of Defense, 1 January through 30 June 1952*, p. 92.

13. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for the Chief of Information, subject: Proposed Contingency Press Release Regarding Psy War Center, 17 June 1952, from Brig. Gen. Robert A. McClure, Psy War 000.7 (16 June 1952); and Memorandum for G-3, subject: Proposed Press Release Regarding the Psychological Warfare Center, 1 July 1952, from Col. Wendell W. Fertig, Acting Chief, OCPW, Psy War 000.7 (1 July 1952); both in Record Group 319, Psy War Admin Office, 1951-54, box 1, National Archives. General McClure told the Chief of Information in his 17 June 1952 memorandum that the mission of Special Forces was classified confidential; thus it was "considered unwise to make any reference thereto in the proposed contingency release." When Col. C. H. Karlstad assumed command of the center, the story noting this event in the Fort Bragg newspaper made no reference to Special Forces operations. Later, the Chief of Information suggested that the press release include reference to Special Forces "to prevent undue probing by the news services into Special Forces activities at Fort Bragg, N.C." By late August 1952, after several weeks of correspondence between G-2, G-3, the Chief of Information, OCPW, and Army Field Forces, a specific policy on the matter still had not been resolved. Nor had the problem been solved by January 1953, when the Special Forces Division initiated action to downgrade from Confidential to Re-

stricted certain aspects of the Special Forces Program (see Psy War 380.01, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 370.64-380.01, box 20, National Archives.

14. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum for the Chief, Special Forces Division, subject: Student Handbook—"The Psychological Warfare School," 13 August 1952, from Lt. Col. Marvin J. Waters, Operations and Training Branch; Memorandum for Col. Wendell W. Fertig, subject: Psy War Center Student Handbook, 14 August 1952, from Col. William J. Blythe, Chief, Special Forces Division; Memorandum for Colonel Blythe, subject: Student Handbook—"The Psychological Warfare School," 21 August 1952, from Lt. Col. Melvin R. Blair; all filed under Psy War 332, Army Service Schools, National Archives. Colonel Blair complained that "not a single word is devoted to the role of Special Forces" in chapter I of the Handbook, although "approximately 50% of the Staff and Faculty personnel and student body will be Special Forces personnel."

15. Headquarters, Psychological Warfare Center, Memorandum No. 14, "Organization and Functions Manual," p. 49. USAJFKCMA.

16. See note 15 above, p. 34; see also the Psychological Warfare Center, Fort Bragg, N.C., *Psy War*, 1954, p. 1, USAJFKCMA.

17. Psychological Warfare Center, *Psy War*, USAJFKCMA. Apparently the Board gave little attention to Special Forces operations: In the above publication, which outlined activities of the Board since its inception, there was no mention of any unconventional warfare projects, nor were there any Special Forces members on the Board as of early 1954. *Psy War* purports "to tell the story of the US Army's Psychological Warfare Center," but nowhere in the 99-page book is any reference made to the Special Forces Group or instructional department that constituted integral elements of the center. Undoubtedly, this was again the result of security-consciousness, perhaps carried to an extreme, concerning Special Forces activities.

18. Headquarters, Department of the Army, Washington, D.C., Training Circular No. 13, "Military Aspects of Psychological Warfare," 8 June 1953, pp. 6f., USAJFKCMA; Psychological Warfare Center, *Psy War*, pp. 35-69, USAJFKCMA.

19. Melvin Russell Blair, "Toughest Outfit in the Army," *Saturday Evening Post*, 228 (12 May 1956): 40-41; Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Orientation Conference for TI&E (Troop Information and Education) Officers, subject: "Current Developments in the Field of Special Forces Operations" (15 January 1952), by Lt. Col. Melvin R. Blair, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 334-337, box 15, Psy War 337 (C) (10 January 1952), National Archives; Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Letter to the Chief, Army Field Forces, subject: Special Forces Orientation for Training Directive and Reception Centers, 24 June 1952, Record Group 319, Psy War, Decimal File (C), 1951-54, 352.16-354.2, box 18, Psy War 353 (24 June 1952), National Archives; also OCPW letter, subject: Orientation Conferences for Service Schools and Selected Headquarters and Installations, to Chief, Army Field Forces, 1 August 1952, Record Group 319, Psy War, Decimal

File (C), 1951-54, 352.16-354.2, box 18, Psy War 353 (1 August 1952), National Archives.

20. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Orientation Conference, "Current Developments in the Field of Special Forces Operations," to be presented to service schools, Army Headquarters, and selected installations during the period 1 October 1952-March 1953, by Lt. Col. Melvin R. Blair, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C) 334-337, 1951-54, box 15, Psy War 337 S (24 September 1952), National Archives; also Psy War 353 (6 November 1952), Orientation Material for Use in Connection with Selection of Volunteers for Special Forces, Record Group 319, Psy War, Decimal File (C), 1951-54, 352.16-354.2, box 18, National Archives; and Psy War 335 C (10 January 1952), Orientation Conference for TI&E (Troop Information and Education) Officers, subject: "Current Developments in the Field of Special Forces Operations" (15 January 1952), by Lt. Col. Melvin R. Blair, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 334-337, box 15, National Archives.

21. See note 20 above, Psy War 337 TS (16 April 1951), Psy War 337 C (10 January 1952), and Psy War 337 (24 September 1952), National Archives.

22. See note 20 above, Psy War 353 (6 November 1952), National Archives.

23. See note 20 above, Psy War 290 TS (8 December 1952) and Psy War 390 TS (19 December 1952), National Archives.

24. Department of the Army, Office of the Adjutant General, Washington, D.C., Letter, subject: Activation of a Unit of the General Reserve, 19 May 1952, AGAO-I, Department of the Army, Washington, D.C., TO&E 33-2 (proposed), 14 April 1952, cited in US Army Combat Developments Command, Special Warfare Agency, Combat Developments Study: Organization for US Army Special Forces, August 1964, USAJFKCMA; Department of the Army, Office of the Chief of Special Forces, Washington, D.C., DF to G3, Organization Branch, subject: Activation of Special Forces Units, 2 May 1952, from Brig. Gen. Robert A. McClure, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 322-326, box 13, Psy War 322 (1 May 1952), National Archives.

25. Letter, Col. Aaron Bank, 17 February 1968, USAJFKCMA (Public Affairs Office).

26. The Psychological Warfare Center, Fort Bragg, N.C., Comments by Members Attending Organization and Training Conference, 9 July 1952, USAJFKCMA. Attendees included representatives from OCPW, AFF, 3d Army, and the Psychological Warfare Center. Colonel Bank strongly urged that the Special Forces Group TO&E's be declassified; present classification restricted publicity in Army publications, and the men could not even tell others their correct unit designation, other than the Psychological Warfare Center—which limited their pride in their unit, Bank believed.

27. Headquarters, The Psychological Warfare Center, Fort Bragg, N.C., Letter to Brig. Gen. Robert A. McClure from Col. C. H. Karlstad, Commanding Officer, 12 September 1952, filed with Record Group 319, Army-Chief of Special Warfare, 1951-54, Psy War 322, National Archives. Karlstad asked McClure for assistance in getting the 7 US training divisions to fulfill their allotted quotas of 35

volunteers per month for Special Forces. McClure followed through on the request rapidly and wrote back to Karlstad on 22 September that the situation should soon improve.

28. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Staff Study to Chief of Staff, US Army, subject: Staff Study on Intensification of Lodge Bill Recruitment Program, 8 August 1952, from Brig. Gen. Robert A. McClure, Record Group 319, Army-Chief of Special Warfare, 1951-56, TS Decimal Files, 337-350.05, box 13, Psy War 342 TS (8 August 1952), National Archives. The reasons for this low rate were many: The many married people and German nationals who applied were not eligible; the citizens of NATO member nations who applied were not eligible; many applicants were disqualified on mental and physical grounds; and many applicants changed their minds during the long time required for security checks.

29. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum to the Chief, Legislative Liaison, subject: Program for Liaison with the Congress, Tab A, "Intensification of Lodge Bill Recruitment Program," from Col. Wendell W. Fertig, Acting Chief, OCPW, 15 August 1952, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 2, Psy War 032.1, National Archives. Tab A, prepared by Col. William J. Blythe, Special Forces Division, projected the overall need for Lodge bill personnel as 4,875 for Special Forces and 40 for psychological warfare units.

30. Headquarters, The Psychological Warfare Center, Fort Bragg, N.C., Letter to Brig. Gen. Robert A. McClure, from Col. C. H. Karlstad, 25 November 1952, Record Group 319, Army-Chief of Special Warfare, 1951-54, National Archives.

31. Letter, Col. Aaron Bank, 17 February 1968, USAJFKCMA (Public Affairs Office).

32. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Training Circular, Special Forces Group (Airborne), 13 May 1952, Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 322-326, box 13, Psy War 322 (13 May 1952), National Archives.

33. Special Warfare Agency, "Organization for Special Forces," pp. II-10-II-13.

34. Letters, Col. Aaron Bank, 17 February 1968 and 3 April 1968, USAJFKCMA (Public Affairs Office).

35. Letter, Brig. Gen. Russell W. Volckmann, 21 March 1969, USAJFKCMA (Public Affairs Office).

36. Headquarters, The Psychological Warfare Center, Fort Bragg, N.C., Comments by Members Attending Organization and Training Conference, 9 July 1952, USAJFKCMA.

37. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., Memorandum to the Chief, Plans and Policy Branch, OCPW, from Col. Oliver Jackson Sands, Jr., US Army Reserve, 7 July 1952, Record Group 319, Army-Chief of Special Warfare, 1951-54, TS Decimal Files, box 6, National Archives. Colonel Sands' memorandum forwarded a study that he had undertaken during his 2 weeks of duty in OCPW, the subject of which was "to study the position of the Office of the Chief of Psychological Warfare in the National Estab-

lishment." Recognizing the limitations of time and breadth in his endeavor, Sands suggested that the study "be used to stimulate thinking among those who are more closely connected with the problem."

38. Department of the Army, Office of the Chief of Psychological Warfare, Washington, D.C., "Tactical Psychological Warfare in the Korean Conflict: An Informal Commentary on Propaganda Operations of the 8th US Army, 1950-51," by Col. Donald F. Hall, 1 April 1954, Record Group 319, Army-Chief of Special Warfare, 1951-54, Secret Decimal Files, 091-091.412, box 7, Psy War 091 Korea, National Archives. Colonel Hall was the Psychological Warfare Officer for the 8th Army in Korea from 9 November 1952 to 14 January 1954, then later served in that capacity at Headquarters, Army Field Forces. Most of the comments and recommendations in his report were limited to the tactical aspects of psychological warfare.

39. See note 38 above.

40. Daniel Lerner, *Sykewar: Psychological Warfare against Germany, D-Day to VE-Day* (New York: George W. Stewart, 1949), pp. 67-93.

41. See note 37 above, Psy War 090.412 TS (7 July 1952). McClure's handwritten comment regarding Colonel Sand's report is instructive: "This is an interesting report although I do not concur that Propaganda and Special Forces Operations are so completely different as to require separation particularly when (a) all other services have same combination, (b) JSPD has dual responsibility, (c) black covert and white propaganda are split between State and OPC."

Chapter IX Notes

1. Daugherty and Janowitz, *Casebook*, pp. 137f., write: "In the military establishment in Washington, staff planning activities involving psychological warfare ceased with the end of World War II hostilities." The authors infer that nothing was done at the Department of the Army until creation of the OCPW. McClure himself was prone to exaggerate somewhat the authorship of OCPW's achievements. As an example, planning for both the Radio Broadcasting and Leaflet Group and Loudspeaker and Leaflet Company concepts was under way in G-3 before the outbreak of war in 1950 and before the creation of OCPW; but McClure would claim later that those ideas, based on World War II experience, originated in OCPW.

2. I am indebted to Prof. Theodore Ropp, Duke University, for this insight.

3. In an economy move, Army Field Forces recommended in October 1953 that the Psychological Warfare Center be deactivated and the responsibility for psychological warfare training transferred back to the Army General School at Fort Riley. Under this plan, all Special Forces schooling would have been conducted within units, rather than in a separate school. After a long and impassioned appeal by OCPW the result was a Psychological Warfare Center that survived, but

at reduced strength. See Office of the Chief of Army Field Forces, Fort Monroe, Va., Letter to Assistant Chief of Staff, G-3, Department of the Army, subject: Future of Psychological Warfare Center, 12 October 1953, filed with Psy War 322, Psy War Center C (30 October 1953), Record Group 319, Psy War Admin Office, Records Branch, Decimal File (C), 1951-54, 322-326, box 13, National Archives.

4. A letter to his friend Lt. Gen. Charles L. Bolte expressed McClure's feelings about leaving OCPW: "To my unexpected surprise and with no little consternation, I have received orders transferring me to Iran to lead the Military Mission. After 10½ of the past 12 years in this particular field and with the added emphasis being placed thereon by the White House, I fail to appreciate G-1's policy. I asked the Chief if there was anything behind it and he assured me there was not. The inference is that I have been in this field too long and there was no future for me as long as I continue in a specialized activity. There are already some rumblings in Defense and across the river but nevertheless I am selling my house and packing up." Office of the Chief of Psychological Warfare, Letter to Lt. Gen. Charles L. Bolte, Commander in Chief, US Army, Europe, 4 March 1953, Record Group 319, Psy War Admin Office, Records Branch, 1951-54, 020-40, box 3, Psy War 040 CIA (undated) 53, National Archives. Ironically, McClure had decried the scarcity of general officers in the Army with psychological warfare or special operations experience. He tried to increase the number of general officers assigned to these specialized activities, including a general officer to head the Psychological Warfare Center. But he was unsuccessful in these attempts, and now he—probably the most experienced general officer in any of the services—was being forced to leave the field that he had devoted so much of his career to building up. See Office of the Chief of Psychological Warfare, Memorandum for the Deputy Chief of Staff for Operations and Administration, subject: Assignment of General Officers to Psychological Warfare Activities, 30 October 1952, from Brig. Gen. Robert A. McClure; McClure's Memorandum for Record, subject: Conversation with General McAuliffe reference General Officers, 26 December 1952; and Memorandums for Record, 2 March 1953 and 6 March 1953, subject: Selection of Commander for the Psychological Warfare Center, by Lt. Col. William Trabue, Executive, OCPW; all filed with Psy War 210.3, Record Group 319, Army-Chief of Special Warfare, National Archives.

SOURCES

Section I—Research Aids

The research for this study began, naturally enough, at the US Army John F. Kennedy Center for Military Assistance, Fort Bragg, N.C. The center's archives were found in three separate locations: the Institute for Military Assistance Library, the center G-1, and the center Public Affairs Office. Within recent years, the G-1 files have been transferred to the Public Affairs Office, and are maintained there by the center historian, Mrs. Beverly Lindsey. Mrs. Lindsey also has a file of correspondence with many of the key officers at the center in the early 1950's, and and keeps some historical documents in her private collection. The personal files of Mr. John Farrell, Combat Developments, Institute for Military Assistance, were helpful. The Institute library is small but specialized in its collection of special warfare secondary sources. While important materials about the establishment of the Psychological Warfare Center were uncovered, the primary sources of the center's archives are not well organized and pertain primarily to the post-1952 years. One must search elsewhere for more detailed information about the center's historical roots.

At the US Army Military History Institute (USAMHI), Carlisle Barracks, Pa., key staff personnel who were most helpful to the author were Miss Joyce Eakin, Assistant Director, Library Services, and Dr. Richard Sommers, Archivist. Miss Eakin has special MHI bibliographies for US Rangers and Special Forces in her files, is knowledgeable about institute holdings, and can provide valuable contacts at both the Center of Military History (CMH) and the National Archives in Washington, D.C. Dr. Sommers maintains the papers and oral histories of numerous senior Army officers; those of Robert A. McClure, Ray Peers, and William P. Yarborough were particularly useful for my work. The MHI Special Bibliographic Series, number 13, volumes 1 and 2, Oral History, contain references to these and other officers, as well as a cross-index of key topics. The institute also has a complete set of the Army General Council Minutes for the period 1942 to 1952. The council met weekly, was composed of the senior War Department leadership, and was chaired by either the Chief of Staff or Deputy Chief of Staff. These minutes were particularly useful in providing an overview of the major decisions and events leading to establishment of the Office of the Chief of Psychological

Warfare (OCPW) in 1951. Similarly, the War Department's *History of the Military Intelligence Division, 7 December 1941-2 September 1945*, which can be found in the MHI, provides some useful leads to the Army's psychological warfare activities during World War II.

Miss Hannah Zeidlik, General Reference Branch, Center of Military History, Washington, D.C., provided CMH special bibliographies on psychological warfare and Special Forces, as well as assistance in locating materials on these topics in the CMH card catalog and files. Of note were copies of OCPW semiannual and annual historical summaries for the early 1950's, which provided valuable leads to pursue in the Department of the Army records, National Archives.

At the National Archives, William Cunliffe and Ed Reese, Modern Military Branch, were the key archivists who helped to ferret out information on US psychological and unconventional warfare from 1941 to 1952; John Taylor was most helpful with Office of Strategic Services (OSS) records. Indeed, these collections in the National Archives provided the foundation upon which this study is based. Foremost in importance were the records of the War Department General and Special Staff (Record Group 165) and those of the Army Staff (Record Group 319). Records of the following staff agencies were instrumental in tracing the history of psychological and unconventional warfare activities within the Army: the Military Intelligence Division (MID), G-2 (Special Studies Group), 1941; the Psychological Warfare Branch, Military Intelligence Service, G-2, 1941-42; the Propaganda Branch, G-2, 1943-45; the Psychological Warfare Branch, Plans and Operations Division (P&O), 1947; the Psychological Warfare Division, Office of the Assistant Chief of Staff, G-3, 1950; and the Office of the Chief of Psychological Warfare, Special Staff, 1951-54. These last records were crucial in determining policies, key personalities, and decisions leading to the formation of Special Forces and creation of the Psychological Warfare Center at Fort Bragg. The footnotes for each chapter of the text provide more comprehensive reference to all of the records.

Section II—Primary Sources

National Archives

Records of the Army Staff (Record Group 319).

G-3 Operations, March 1950-51, 091.412 series, boxes 154-58.

Plans and Operations Division, 1946-48, 091.412 series, including Top Secret files.

Army Operations, 1948-52, 091.412 series, Top Secret "Hot Files," particularly boxes 9 and 10. Includes Plans and Operations Division and G-3 Operations records on psychological and unconventional warfare and interface with the CIA.

Office of the Chief of Psychological Warfare, 1951-54.

Unclassified and Confidential Decimal File, 13 feet, 40 boxes.

Secret Decimal Correspondence File, 6 feet, 30 boxes.

Top Secret Decimal Correspondence File, 6 Feet, 22 boxes.

Army Intelligence Decimal Files, 1941-48, Washington National Records Center (WNRC), Suitland, Md., particularly series 370.5 (1-31-42) to 373.2, box 874; series 322.001 (10-31-42) to 322.03 (1-1-43), box 576; series 091.4 (9-20-43) to 091.412 (1-1-47), box 262; series 091.412 (121.31-46) to 091.412 Counterpropaganda, box 263.

Records of the Joint Chiefs of Staff (Record Group 218). See series 385, 1946-53, boxes 147-56, for information on psychological and unconventional warfare.

Records of the War Department General and Special Staff (Record Group 165).

Military Intelligence Division (G-2), Propaganda Branch Correspondence, 1939-45, boxes 326-44. Contains reports, directives, bulletins, and other papers dealing with psychological warfare and propaganda activities in overseas theaters. 6 feet.

Office of the Director of Intelligence (G-2), 1906-49.

The Psychologic Section contains classified propaganda manuals and other records relating to propaganda and psychological warfare, 1918-26. 2 feet.

Operations and Plans Directorate (OPD), OPD 000.24 Section I (Cases 1-39), OPD 000.24 Section II (Cases 40-61), September 1943-January 1944, and OPD 000.24 Section III (Case 62-), February 1944-December 1945. Contains excellent material on interaction between OPD, G-2, and other offices, establishment of Propaganda Branch, G-2, and organization for psychological warfare in the War Department General Staff (WDGS).

US Army John F. Kennedy Center for Military Assistance

Army General School, Fort Riley, Kans. Instructional Text, "Tactical Psychological Warfare, The Combat Psychological Warfare Detachment," October 1946.

Army General School, Fort Riley, Kans. "Program of Instruction for Psychological Warfare Officer Course," August 1951.

Army General School, Fort Riley, Kans. "Program of Instruction, Psychological Warfare Unit Officer Course," January 1951. Believed to be the first formal course in psychological warfare taught in the United States.

Department of the Army, Office of the Chief of Information. *Special Warfare, US Army: An Army Specialty*. Washington, D.C., 1962.

The Ground General School, Fort Riley, Kans. Special Text No. 8, "Strategic Psychological Warfare," 15 February 1949.

- Headquarters, Department of the Army, Washington, D.C. Training Circular No. 13, "Military Aspects of Psychological Warfare," 8 June 1953. Gives definitions and organization for psychological warfare at national and Department of the Army levels. Outlines mission and organizations of the Radio Broadcasting and Leaflet Group and the Loudspeaker and Leaflet Company.
- Headquarters, Department of the Army, Washington, D.C. Special Regulations No. 10-250-1, "Organization and Functions, Office of the Chief of Psychological Warfare, Special Staff," 22 May 1951.
- Headquarters, John F. Kennedy Center for Military Assistance, Fort Bragg, N.C. Undated fact sheet, "Lineage of Special Forces" (mimeographed).
- Headquarters, The Psychological Warfare Center, Fort Bragg, N.C. "Administrative Information Handbook, Psychological Warfare Seminar, 17-19 December 1952," December 1952. Gives detailed mission of the Psychological Warfare School and an outline of some of its early academic subjects. Also contains map outlining physical organization of the center.
- Headquarters, The Psychological Warfare Center, Fort Bragg, N.C. Letter to Chief, Psychological Warfare, Department of the Army, subject: "Activation of the Psychological Warfare School," 12 September 1952. The center's appeal to the Department of the Army to give the Psychological Warfare School a formal service school status rather than a provisional status.
- Headquarters, The Psychological Warfare Center, Fort Bragg, N.C. Memorandum No. 14, "Organization and Functions Manual, Headquarters, The Psychological Warfare Center," 12 November 1952. The earliest formal document published by the Psychological Warfare Center that I have been able to find—the basic organizational directive for the center.
- The Institute for Military Assistance Library, Fort Bragg, N.C. "Examples of UW." A folder of reports and speeches on various aspects of unconventional warfare. Includes the 1956 speech by Ray Peers to the Special Warfare School, one of the most comprehensive speeches I have read on the details of a guerrilla warfare organization (OSS Detachment 101, Burma).
- The Office of Strategic Services. "OSS Aid to the French Resistance in World War II." The following individual reports were assembled in 1944-45 under the direction of Col. Joseph Lincoln. They are basically post-action reports of OSS activities and operations taken verbatim from unit and personal journals. These reports represent the richest lode of information I have seen on the details of actual OSS organization, techniques, training, personnel, and operations in Europe.
- "Origin and Development of Resistance in France: Summary."
- "Jedburghs: DOUGLAS II, Number 61, through JULIAN II, Number 67."
- "Operations in Southern France: Operational Group."
- "American Participation in MASSINGHAM Operations Mounted in North Africa: Jedburghs."
- "Corsica: Operation Tommy."
- "Poles in France Used by the Resistance: A Report on the Organization of Poles in France by SOE/OSS to Create a Guerrilla Force for Augmenting the Activities of French Resistance Elements."

"DF Section."

"Massive Supply Drops."

"Missions: F-Section."

"F-Section Circuits: Reports by Participating American Personnel of OSS."

"F-Section: Reports by OSS Participants."

"SO-RF Section Missions: Introduction and First Quarter, 1944."

"SO-RF Section Missions: Second Quarter, 1944."

"Missions and Sabotage: RF Section, Third Quarter, 1944."

Operations Research Office (ORO), The Johns Hopkins University.

Technical Memorandum ORO-T-64 (AFFE), "UN Partisan Warfare in Korea, 1951-1954," June 1956. A study performed by a team from ORO that traveled to Korea, examined records, and conducted interviews. Attempts to evaluate magnitude and effectiveness of US partisan warfare activities. IMA Library archives.

Propaganda Branch, Intelligence Division, War Department General Staff, The Pentagon, Washington, D.C. "Revised Draft War Department Field Manual, FM 30-60," September 1946.

Propaganda Branch, Intelligence Division, War Department General Staff, The Pentagon, Washington, D.C. "A Syllabus of Psychological Warfare," October 1946.

The Psychological Warfare School, Fort Bragg, N.C. "Guide for Staff and Faculty," April 1953. Contains organization and functions of the school, boards, and committees; information on preparation of instruction and instructional material; and information on administration of students and academic evaluation.

The Psychological Warfare Center, Fort Bragg, N.C. *Psy War*, 1954.

The first publication that gives some details on the background, training, and activities of the individual units assigned to the Psychological Warfare Center. Contains unit organization and chain of command charts. No mention is made of the Special Forces Department in the Psychological Warfare School or of the Special Forces Group.

The Psychological Warfare School, Fort Bragg, N.C. "Student Handbook," September 1953. Contains mission and organization of school, academic and administrative information pertaining to students, and a valuable organization chart of the Psychological Warfare Center dated 1 August 1953.

Public Affairs, Office, John F. Kennedy Center for Military Assistance, Fort Bragg, N.C. Letters from:

Brig. Gen. Russell W. Volckmann (Ret.), with one enclosure, 21 March 1969.

Col. Otis E. Hays, Jr., (Ret.) with five enclosures, 5 May 1969.

Col. Aaron Bank (Ret.), 17 February 1968, 3 April 1968, and 27 February 1973.

These letters not only contained valuable information but also provided important leads on the origins of the Psychological Warfare Center.
